NEW QUESTION # 204

A customer deployed an application on Compute Engine that takes advantage of the elastic nature of cloud computing.

How can you work with Infrastructure Operations Engineers to best ensure that Windows Compute Engine VMs are up to date with all the latest OS patches?

- A. Reboot all VMs during the weekly maintenance window and allow the StartUp Script to download the latest patches from the internet.
- B. Build new base images when patches are available, and use a CI/CD pipeline to rebuild VMs, deploying incrementally.
- C. Federate a Domain Controller into Compute Engine, and roll out weekly patches via Group Policy Object.
- D. Use Deployment Manager to provision updated VMs into new serving Instance Groups (IGs).

Answer: A

NEW QUESTION # 205

An organization is migrating from their current on-premises productivity software systems to G Suite. Some network security controls were in place that were mandated by a regulatory body in their region for their previous on-premises system. The organization's risk team wants to ensure that network security controls are maintained and effective in G Suite. A security architect supporting this migration has been asked to ensure that network security controls are in place as part of the new shared responsibility model between the organization and Google Cloud.

What solution would help meet the requirements?

- A. Network security is a built-in solution and Google's Cloud responsibility for SaaS products like G Suite.
- B. Set up an array of Virtual Private Cloud (VPC) networks to control network security as mandated by the relevant regulation.
- C. Set up Cloud Armor to ensure that network security controls can be managed for G Suite.
- D. Ensure that firewall rules are in place to meet the required controls.

Answer: C
