

최신버전CDT최신버전자료시험공부자료

2026 DumpTOP 최신 CDT PDF 버전 시험 문제집과 CDT 시험 문제 및 답변 무료 공유: https://drive.google.com/open?id=115LE5UFZTISHxUZI68UbbQ_5tWMHjdTz

DumpTOP는 IT인증자격증 시험에 대비한 덤프공부가이드를 제공해드리는 사이트인데 여러분의 자격증 취득의 꿈을 이루어드릴수 있습니다. Construction Specifications Institute인증 CDT시험을 등록하신 분들은 바로DumpTOP의 Construction Specifications Institute인증 CDT덤프를 데려가 주세요. 단기간에 시험패스의 기적을 가져다드리는것을 약속합니다.

Construction Specifications Institute CDT Exam Syllabus Topics:

Section	Weight	Objectives
Construction	15%	- Construction Administration 1. Submittals and RFIs 2. Change management 3. Quality assurance and quality control
Preconstruction	9%	- Project Planning 1. Risk management 2. Cost estimating 3. Scheduling
Design Process	12%	- Design Development 1. BIM and documentation 2. Programming and schematic design 3. Design coordination
Construction Documents	22%	- Documentation and Specifications 1. Document coordination 2. MasterFormat and SectionFormat 3. Drawings and specifications
Project Concept and Delivery	11%	- Project Delivery Methods 1. Design-build 2. Design-bid-build 3. Construction management

Lifecycle Activities	8%	- Facility Operations • 1. Maintenance and operations • 2. Commissioning • 3. Sustainability and lifecycle management
Fundamentals	13%	- Construction Industry Basics • 1. Construction terminology • 2. Roles and responsibilities • 3. Codes and standards
Procurement	10%	- Bidding and Negotiation • 1. Addenda and substitutions • 2. Procurement procedures • 3. Bid evaluation

Construction Specifications Institute CDT인증시험 공부자료, CDT시험대비 공부자료

인터넷에 검색하면 Construction Specifications Institute CDT시험덤프공부자료가 헤아릴수 없을 정도로 많이 검색됩니다. 그중에서DumpTOP의Construction Specifications Institute CDT제품이 인지도가 가장 높고 가장 안전하게 시험을 패스하도록 지름길이 되어드릴수 있습니다.

최신 CDT Certification CDT 무료샘플문제 (Q47-Q52):

질문 # 47

When should a post-occupancy evaluation by the facility manager be performed?

- A. One year after substantial completion
- B. Three to six months after initial occupancy
- C. Just before the end of the warranty period
- D. At the end of the correction period

정답: B

질문 # 48

During design, in a design-build delivery method, what is the design-builder responsible for delivering to the owner?

- A. Geotechnical reports
- B. Record documents
- C. Construction documents
- D. Submittals

정답: C

질문 # 49

Under SectionFormat, where would the Article "Manufacturers" be found?

- A. Part 2 only
- B. Part 1 only
- C. Part 3 only
- D. Either Part 1 or Part 2

정답: A

설명:

CSI's SectionFormat establishes a standard three-part structure for specification sections:

- * Part 1 - GeneralAdministrative and procedural requirements specific to that section (scope, related work, references, submittals, quality assurance, delivery/storage, warranties, etc.).
- * Part 2 - ProductsDescriptions of products, materials, and equipment required: manufacturers, materials, components, fabrication, finishes, performance requirements, and similar.
- * Part 3 - ExecutionField/application/installation requirements: examination, preparation, installation /application procedures, tolerances, field quality control, adjustment, cleaning, protection, etc.

Within this structure, CSI specifically places "Manufacturers" as an article in Part 2 - Products. This is because Part 2 is where the specifier identifies:

- * Acceptable manufacturers or manufacturer list
- * Standard products and models
- * Performance or quality requirements associated with those manufacturers
- * Product substitutions (if addressed by article structure)

Placing "Manufacturers" in Part 2 maintains consistency across specs and makes it clear that manufacturer- related information is part of the product requirements, not administrative conditions or execution procedures.

Why the other options do not align with SectionFormat:

* A. Either Part 1 or Part 2Although some poorly structured sections in practice may misplace content, CSI's recommended SectionFormat is explicit: manufacturers belong in Part 2 - Products.

Allowing Part 1 or Part 2 would blur the distinction between administrative requirements and product requirements.

* B. Part 1 onlyPart 1 is not intended for listing manufacturers. It covers general/administrative topics, not the specific products or manufacturers.

* D. Part 3 onlyPart 3 deals with execution/installation in the field, not who manufactures the products.

Manufacturer listing in Part 3 would conflict with CSI's structure and make the section harder to interpret and coordinate.

Therefore, under SectionFormat, the correct location for the "Manufacturers" article is Part 2 only (Option C).

Key CSI References (titles only, no links):

- * CSI SectionFormat and PageFormat (official CSI format document).
- * CSI Construction Specifications Practice Guide - chapters explaining the three-part section structure and where to place specific articles such as "Manufacturers."
- * CSI MasterFormat/SectionFormat training materials used for CDT preparation.

질문 # 50

To obtain progress payments, the contractor must submit an application for payment itemized in accordance with what?

- A. The construction schedule
- B. The subcontractor's invoices
- **C. The schedule of values**
- D. The percentage of completion

정답: C

설명:

CSI describes the schedule of values as the breakdown of the contract sum allocated to portions of the work (often by specification section, building system, or major components). It is used as the basis for reviewing progress payments.

In CSI-aligned practice:

- * Before the first application for payment, the contractor submits a schedule of values to the A/E for review.
- * Each line item represents a portion of the work with an assigned dollar amount.
- * Every application for payment is itemized against that schedule-showing the percentage complete and corresponding dollar amount for each item.

Thus, the contractor's application is organized and itemized in accordance with the schedule of values, enabling the A/E and owner to evaluate progress in a consistent, transparent way. That matches Option C.

Why the others are incomplete or incorrect in this context:

- * A. The construction schedule - The construction schedule shows time and sequencing, not the cost breakdown used to itemize payment requests.
- * B. The subcontractor's invoices - These may support the contractor's internal accounting but do not define how the application for payment must be structured for the owner.
- * D. The percentage of completion - Percentage of completion is important, but it is applied to each line item in the schedule of values. The question asks what the application must be itemized in accordance with, which is the schedule of values, not just

percentages.

CSI-aligned references (no URLs):

- * CSI Project Delivery Practice Guide - sections on construction phase payment procedures.
- * CSI CDT Body of Knowledge - payment applications and use of schedule of values.
- * Standard conditions of the contract as discussed in CSI materials - provisions on progress payments.

질문 # 51

Within the context of the construction industry, what does BIM stand for?

- A. Building Information Modeling
- B. Building Interior Maintenance
- C. Building Inspection Manual
- D. Business Information Manual

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract (CSI-based)

In CSI's project delivery and documentation discussions, BIM is consistently defined as "Building Information Modeling." CSI describes BIM as:

- * A digital representation of the physical and functional characteristics of a facility.
- * A shared knowledge resource for information about a facility, forming a reliable basis for decisions during its life cycle.
- * A tool that supports coordination, clash detection, documentation, quantity takeoff, and communication between design and construction team members.

BIM models are used alongside, and coordinated with, drawings, specifications, and other contract documents, and they support communication and decision-making throughout design, construction, and sometimes operation.

The other options are not recognized industry meanings of BIM:

- * B. Business Information Manual - not a standard construction-industry term.
- * C. Building Interior Maintenance - does not match CSI or industry definitions of BIM.
- * D. Building Inspection Manual - again, not the accepted meaning of BIM in the AEC context.

Therefore, in the construction context, BIM stands for "Building Information Modeling" (Option A).

Key CSI References (titles only):

- * CSI Project Delivery Practice Guide - chapters addressing BIM and information management.
- * CSI Construction Specifications Practice Guide - discussions of model-based delivery and coordination with specifications.
- * CSI CDT Body of Knowledge - terminology and emerging practices including BIM.
