

Positive AP-202 Feedback, AP-202 Brain Dumps

Many candidates felt worried about their exam for complex content and too extensive subjects to choose and understand. Our AP-202 exam materials successfully solve this problem for them. With the simplified language and key to point subjects, you are easy to understand and grasp all the information that in our AP-202 training guide. For Our professionals compiled them with the purpose that help all of the customer to pass their AP-202 exam.

Our AP-202 study materials are in short supply in the market. Our sales volumes are beyond your imagination. Every day thousands of people browser our websites to select study materials. As you can see, many people are inclined to enrich their knowledge reserve. So you must act from now. The quality of our AP-202 Study Materials is trustworthy. We ensure that you will satisfy our study materials. If you still cannot trust us, we have prepared the free trials of the AP-202 study materials for you to try.

AP-202 Brain Dumps, New AP-202 Exam Duration

We will continue to pursue our passion for better performance and human-centric technology of latest AP-202 quiz prep. And we guarantee you to pass the AP-202 exam for we have confidence to make it with our technological strength. A good deal of researches has been made to figure out how to help different kinds of candidates to get the AP-202 Certification. We have made classification to those faced with various difficulties, aiming at which we adopt corresponding methods. According to the statistics shown in the feedback chart, the general pass rate for latest AP-202 test prep is 98%.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q129-Q134):

NEW QUESTION # 129

A developer is on a tight timeline and needs to implement a Lightning web component which can read, create and modify single records. What is the recommended path forward?

- A. Use base components
- B. Create an Apex Controller
- C. Write custom functions against a wire adapter
- **D. Use Lightning Data Service**

Answer: D

Explanation:

To implement a Lightning web component which can read, create and modify single records, the recommended path forward is to use Lightning Data Service. Lightning Data Service is a service that provides access to Salesforce data and metadata, cache

management, and data synchronization across components. Lightning Data Service allows developers to use standard components or base components to perform CRUD (create, read, update, delete) operations on single records without writing Apex code or SOQL queries. Lightning Data Service also handles data caching, performance optimization, and conflict resolution automatically. Using base components is not a sufficient way to implement a Lightning web component which can read, create and modify single records, as base components are only user interface elements that do not provide data access or manipulation functionality by themselves. Base components need to be used with Lightning Data Service or other services to perform CRUD operations on single records. Writing custom functions against a wire adapter is not a recommended way to implement a Lightning web component which can read, create and modify single records, as it involves writing complex and error-prone JavaScript code that may not be efficient or scalable. Writing custom functions against a wire adapter also requires handling data caching, performance optimization, and conflict resolution manually. Creating an Apex controller is not a recommended way either, as it involves writing Apex code that may not be necessary or optimal for performing CRUD operations on single records. Creating an Apex controller also requires exposing Apex methods using `@AuraEnabled` or `@RemoteAction` annotations and invoking them from JavaScript code using imperative calls or promises. NEW QUESTION # 130

What is default behavior for how the Salesforce B2B Commerce Global APIs transform Salesforce data?

- A. Fields names can be mapped to any naming convention desired
- **B. Fields names are returned with a lowercase first letter, camelcase convention**
- C. Fields names are returned using the Salesforce naming convention.
- D. Fields names are returned with c." prepended in their name.

Answer: B

Explanation:

The default behavior for how the Salesforce B2B Commerce Global APIs transform Salesforce data is to return field names with a lowercase first letter, camelcase convention. For example, the field name `ccrz__E_Product__c` in Salesforce will be transformed to `eProduct` in the API. This is done to follow the JavaScript naming convention and to avoid conflicts with the standard Salesforce fields and relationships. NEW QUESTION # 131

Ursa Major is planning to implement Salesforce B2B Commerce, and a developer needs to configure taxes for their storefront. The company operates in multiple states, each with different tax rates and tax rules.

What are two ways the developer should configure taxes in B2B Commerce?

- **A. Configure tax rates and rules for each state in Salesforce B2B Commerce.**
- B. Use the Salesforce out-of-the-box tax calculator.
- **C. Configure a tax engine using third-party software.**
- D. Use a different pricebook for each state.

Answer: A,C

Explanation:

Two ways that a developer should configure taxes in B2B Commerce for Ursa Major are: configure a tax engine using third-party software and configure tax rates and rules for each state in Salesforce B2B Commerce. Configuring a tax engine using third-party software allows the developer to integrate with an external tax service provider that can calculate and apply accurate and up-to-date tax rates and rules for different states and jurisdictions. The developer can use the `sfdc_checkout.TaxCalculations` interface or the `RegisteredExternalService` object to connect to the third-party tax service provider's API or service. Configuring tax rates and rules for each state in Salesforce B2B Commerce allows the developer to implement their own custom tax calculation logic using Apex code. The developer can use custom objects, such as `TaxRate__c` and `TaxRule__c`, to store and manage tax rates and rules for different states and products. The developer can also use the `sfdc_checkout.TaxCalculations` interface to define how to retrieve and apply tax rates and rules for a cart or an order. Using a different pricebook for each state is not a good way to configure taxes in B2B Commerce, as it can create complexity and inconsistency in pricing and discounting logic. Using the Salesforce out-of-the-box tax calculator is not a good way either, as it does not support complex or dynamic tax scenarios that may vary by state or jurisdiction. Salesforce [B2B Commerce Developer Guide: Tax Integration], [B2B Commerce Developer Guide: Tax Calculations Interface], [B2B Commerce Developer Guide: TaxRate Object], [B2B Commerce Developer Guide: TaxRule Object]

NEW QUESTION # 132

Universal Containers (UC) needs to display data from standard objects (entities) in a different format than what comes with B2B Commerce out of the box. In doing this, what is one advantage of using the Lightning Data Service vs using a custom Controller class?

- A. There is a Visual Studio add-in that accelerates the layout process
- B. JavaScript proxies for transport objects are created in the developer's IDE automatically.
- **C. The developer can read, create, or modify single records or metadata without writing Apex code.**
- D. Lightning Data Service translates the developer's component implementation to a VisualForce page for backward compatibility.

Answer: C

Explanation:

Lightning Data Service (LDS) is a Salesforce UI API layer that empowers developers to perform CRUD operations and manage Salesforce data without the need for custom Apex controllers. LDS is designed to improve performance, user interface consistency, and developer productivity by handling data operations and sharing rules, thus reducing the need for server-side code. For more details, refer to the Salesforce documentation on Lightning Data Service: [Salesforce Lightning Data Service Documentation](#).

NEW QUESTION # 133

Which technique can be used with Lightning web components to expose them outside of an org in another web container?

- A. Slot elements
- B. Lightning Canvas
- **C. Lightning Out**
- D. Heroku

Answer: C

Explanation:

According to the Lightning Web Components Developer Guide, Lightning Out is a technique that allows developers to run Lightning web components outside of Salesforce servers, such as in a Node.js app running on Heroku or a department server inside the firewall. Lightning Out uses a script tag to load the Lightning web components framework and the custom components into the web container. Lightning Out also handles authentication, event handling, and data access between the web container and the Salesforce org. Slot elements, Heroku, and Lightning Canvas are not techniques for exposing Lightning web components outside of an org in another web container. Lightning Web Components Developer Guide, Use Components Outside Salesforce, B2B Commerce and D2C Commerce Developer Guide

NEW QUESTION # 134

.....

One can start using product of ITCertMagic instantly after buying. The 24/7 support system is available for the customers so that they don't stick to any problems. If they do so, they can contact the support system, which will assist them in the right way and solve their issues. A lot of B2B Commerce for Developers Accredited Professional (AP-202) exam applicants have used the B2B Commerce for Developers Accredited Professional (AP-202) practice material. They are satisfied with it because it is updated.
