Quiz 2026 SAP High Pass-Rate C_S4PM_2504: Reliable SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Exam Cost

Will you feel nervous in the exam? If you do, just try us C_S4PM_2504 study materials, we will release your nerves as well build up your confidence for the exam. C_S4PM_2504 Soft test engine can stimulate the real exam environment, so that you can know the procedure of the real exam, and your nervous will be relieved. In addition, C_S4PM_2504 Study Materials are high quality, and they can help you pass the exam. They also contain both questions and answers, you can have a quickly check after practicing.

SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following capabilities does test management in SAP Cloud ALM for Implementation provide?

Note: There are 2 correct answers to this question.

- A. Manual and Automated Testing
- B. Test Data Container
- C. Test Plans
- D. Load and Volume Testing

Answer: A,C

NEW QUESTION # 23

In the SAP Activate prepare phase, the cloud project is set up and officially launche Which change management activities are usually started in this phase?

Note: There are 3 correct answers to this question.

- A. Conduct a detailed change impact analysis
- B. Identify the key stakeholders and conduct a stakeholder analysis
- C. Develop an initial change plan for the cloud project
- D. Facilitate the role mapping process
- E. Develop and align the change network strategy

Answer: B,C,E

NEW QUESTION # 24

When doing a new implementation on premise or private cloud, which system is recommended to demonstrate standard functionality in the Explore phase?

- A. Starter
- B. Sandbox
- C. Trial
- D. Development

Answer: B

Explanation:

In the Explore phase of a new implementation for SAP S/4HANA on-premise or Private Cloud, a system is used to demonstrate standard functionality, typically SAP Best Practices, to validate the solution fit during Fit- to-Standard workshops.

* Option A: DevelopmentIncorrect. The Development system is used for configuration and custom development in the Realize phase, not for demonstrating standard functionality. The SAP S/4HANA Implementation Guide states, "Development systems are for building and testing configurations, not for demonstrating standard processes in the Explore phase."

* Option B: StarterIncorrect. The Starter system is specific to SAP S/4HANA Cloud Public Edition, not on-premise or Private Cloud implementations. The SAP S/4HANA Cloud Study Guide notes, "The Starter system is used in Cloud Public Edition, while on-premise or Private Cloud uses other systems for exploration."

* Option C: SandboxCorrect. The Sandbox system is recommended for demonstrating standard functionality in on-premise or Private Cloud implementations during the Explore phase. The SAP Activate Methodology Guide explains, "For new implementations of SAP S/4HANA on-premise or Private Cloud, the Sandbox system is used in the Explore phase to demonstrate standard functionality and support Fit-to-Standard workshops."

* Option D: TrialIncorrect. Trial systems are for evaluation or training, not for active implementation.

The SAP S/4HANA Implementation Guide clarifies, "Trial systems are for exploration outside of implementation projects, not for

demonstrating standard functionality during the Explore phase." Extract from Official Documentation:

* SAP Activate Methodology Guide([SAP Community](https://community.sap.com),<https://community.sap.com>): "In the Explore phase for SAP S/4HANA on-premise or Private Cloud, the Sandbox system is recommended to demonstrate standard functionality, enabling Fit-to-Standard workshops to validate the solution fit."

* SAP S/4HANA Implementation Guide([SAP Help Portal](https://help.sap.com),<https://help.sap.com>): "The Sandbox system is used in on-premise or Private Cloud implementations to showcase SAP Best Practices and standard functionality during the Explore phase, supporting requirement validation." Additional Context:

The Sandbox system's role in on-premise and Private Cloud implementations mirrors the Starter system's role in Public Cloud, providing a safe environment to explore standard processes without impacting development or production systems. This aligns with SAP Activate's focus on early validation to minimize customizations.

SAP Activate Methodology: Outlines Explore phase systems.

NEW QUESTION # 25

Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer?

Note: There are 3 correct answers to this question.

- A. Starter system
- B. Trial system
- C. Sandbox system
- D. Test system
- E. Development system

Answer: A,C,D

Explanation:

The implementation of SAP S/4HANA Cloud Public Edition typically involves a three-system landscape to support different phases of the project, including exploration, configuration, testing, and deployment. Each system serves a specific purpose in the SAP Activate methodology.

* Option A: Sandbox systemCorrect. The Sandbox system is used for early exploration, prototyping, and testing customizations or extensions. According to the SAP S/4HANA Cloud Public Edition Implementation Guide, "The Sandbox system provides a safe environment for customers to explore SAP Best Practices, test configurations, and prototype extensions during the implementation process."

* Option B: Starter systemCorrect. The Starter system is provisioned early in the implementation to demonstrate SAP Best Practice processes during Fit-to-Standard workshops in the Explore phase. The SAP Activate Methodology Guide states, "The Starter system is used to showcase standard business processes and validate the solution fit during Fit-to-Standard workshops, enabling customers to understand the SAP S/4HANA Cloud capabilities."

* Option C: Test systemCorrect. The Test system (also known as the Quality system) is used for integration testing, regression testing, and user acceptance testing during the Realize phase. The SAP S/4HANA Cloud Testing Guide notes, "The Test system is critical for validating configurations, integrations, and customizations before deployment to the Production system."

* Option D: Trial systemIncorrect. A Trial system is used for evaluation or learning purposes, not for active implementation. The SAP S/4HANA Cloud Study Guide clarifies, "Trial systems are provided for customers to explore SAP S/4HANA Cloud but are not part of the implementation landscape."

* Option E: Development systemIncorrect. In SAP S/4HANA Cloud Public Edition, there is no separate Development system; development activities occur in the Sandbox or Test systems. The SAP S/4HANA Cloud Implementation Guide explains, "Unlike on-premise systems, SAP S/4HANA Cloud Public Edition uses a streamlined landscape without a dedicated Development system, leveraging Sandbox and Test systems for development tasks." Extract from Official Documentation:

* SAP S/4HANA Cloud Public Edition Implementation Guide([SAP Help Portal](https://help.sap.com),<https://help.sap.com>):

"The three-system landscape for SAP S/4HANA Cloud Public Edition includes the Starter system for Fit-to-Standard workshops, the Sandbox system for prototyping and exploration, and the Test system for validation and testing."

* SAP Activate Methodology Guide([SAP Community](https://community.sap.com),<https://community.sap.com>): "The Starter system supports the Explore phase, the Sandbox system enables experimentation, and the Test system is used for quality assurance in the Realize phase, forming the core implementation landscape." Additional Context:

The three-system landscape (Starter, Sandbox, Test) is designed to support the cloud mindset of SAP S/4HANA Cloud Public Edition, minimizing customizations and leveraging standard processes. The Starter system is temporary and decommissioned after the Explore phase, while the Sandbox and Test systems persist through the implementation, with the Test

system transitioning to a Quality system for ongoing testing.

SAP S/4HANA Cloud Study Guide: Explains the three-system landscape.

NEW QUESTION # 26

How would you describe the different dimensions of SAP's organizational change management framework? Note: There are 3 correct answers to this question.

- A. Change realization includes activities to realize the business benefits associated with the cloud implementation.
- B. Change strategy covers activities to set up change management properly.
- C. Change communication encompasses activities to provide relevant project information to the different stakeholder groups at the right time.
- D. Change effectiveness contains activities that can be applied to evaluate the impact of change management interventions.
- E. Change leadership involves activities to enable all management levels to handle the cloud implementation and deal with resistance.

Answer: A,B,E

NEW QUESTION # 27

.....
