Test Slack-Admn-201 Passing Score - Detail Slack-Admn-201 Explanation

If you take a little snack, you will find that young people are now different. They made higher demands on themselves. This is a change in one's own mentality and it is also a requirement of the times! Whether you want it or not, you must start working hard! And our Slack-Admn-201 exam materials may slightly reduce your stress. With our Slack-Admn-201 study braidumps for 20 to 30 hours, we can proudly claim that you can pass the exam easily just as a piece of cake. And as long as you try our Slack-Admn-201 practice questions, you will love it!

Salesforce Certified Slack Administrator Sample Questions (Q42-Q47):

NEW QUESTION # 42

You are a Slack admin and you have just implemented Enterprise Key Management (EKM) within your Enterprise Grid. In which situation would it be most appropriate to revoke the key?

- A. When sensitive information is placed in the incorrect channel and shared with other users.
- B. When a Multi-Channel Guest is invited into one of the company's workspaces.
- C. When working with contractors in a Slack Connect channel.

Answer: A

Explanation:

Slack EKM guidelines specify:

"If sensitive information is exposed improperly (for example, shared in the wrong channel), you can revoke the encryption key, making that content permanently inaccessible." Guests (A) or contractors in Slack Connect (B) are expected collaboration contexts and do not warrant revoking keys unless data leakage happens.

(Reference: Slack Administration Study Guide - Enterprise Key Management (EKM) Operations)

-

NEW QUESTION # 43

The security team at your organization wants to monitor different public channels that are created in your Slack Enterprise Grid instance. The team requested access to the `conversations.list` and `conversations.info` API methods to get the required data about the channels.

As a Slack admin, you need to assign the required scopes to their Slack app for the security team to be able to invoke the APIs.

Which scope should you assign to allow the security team to retrieve a list of all public channels only and retrieve information about a public channel?

(Select the best answer.)

- A. `conversations.connectread`
- B. `files.read`
- C. `admin.conversations.read`
- D. `channels.read`

Answer: C

Explanation:

The correct scope is `admin.conversations.read`.

According to Slack's official API documentation:

"The `admin.conversations.read` scope allows approved apps to call the `conversations.list` and `conversations.info` methods for public channels across an Enterprise Grid organization."

`channels.read` (D) is a user token scope and limited to channels the user is a member of, while `admin.conversations.read` provides broader access necessary for admins or security teams at the org level.

`files.read` (A) relates to file data, and `conversations.connectread` (C) is unrelated.

-

NEW QUESTION # 44

A project team in charge of implementing Slack plans to check in with their executive team three months after the launch. The goal of this check-in meeting is to define the success of Slack at the organization.

What should the team do to prepare for this milestone most effectively?

- A. Show the progress that has been made on configuring single sign-on (SSO) and training the IT help desk team on Slack's admin capabilities.
- B. Display the number of weekly active members in Slack, trending from the beginning of the launch to the three-month mark.
- C. Prepare to show the executive team the admin console so they understand the depth of settings and policies available in Slack.
- D. Meet with key business units to identify and measure opportunities to improve productivity using Slack.

Answer: D

Explanation:

To define Slack's success, it's essential to tie usage to business outcomes and improved productivity - not just technical setup or user counts.

Slack documentation recommends:

"Engage business units to identify opportunities where Slack has improved workflows, collaboration, or response times, and measure these against baseline expectations." This makes the success conversation focused on value and business impact rather than technical completeness or adoption rates alone.

(Reference: Slack Administration Study Guide - Defining Success and ROI with Slack)

-

NEW QUESTION # 45

You're a Workspace Owner for a Slack Business+ workspace, working with your security team to launch Slack globally.

You want members to integrate Slack with their daily productivity apps from day one.

What should you do?

- **A. Pre-approve daily productivity apps, and restrict apps that security has already deemed too risky.**
- B. Use an Admin API to manage and approve apps automatically.
- C. Turn on app approvals, and have users individually request to install each app.
- D. Pre-approve daily productivity apps, and restrict apps that are not commonly used.

Answer: A

Explanation:

Slack best practices recommend:

"Pre-approving key apps ensures fast adoption while restricting high-risk apps maintains security compliance." Admin API (B) is more technical and unnecessary at launch. Individual requests (C) create friction. Pre- approving apps and restricting non-common ones (D) isn't optimal unless based on risk evaluation.

(Reference: Slack Administration Study Guide - App Management Best Practices)

-

NEW QUESTION # 46

You're an Org Admin for an organization with an Enterprise Grid plan. You receive a list of several full members who will be leaving the organization in 5 days, with the instruction to deactivate their accounts after their departure.

What is the best way to do this?

- A. Deactivate the members in the Organization Settings 'Members' tab.
- **B. Deactivate the members utilizing the SCIM API.**
- C. Request the Primary Org Owner do this, as they are the only one who can perform this action.
- D. Contact Slack via /feedback to get the members deactivated.

Answer: B

Explanation:

Slack recommends:

"When using SCIM provisioning, admins can automate the deactivation of user accounts through the SCIM API, ensuring synchronization with identity provider (IdP) data." Deactivating manually through the Org Settings (A) is possible but less efficient and scalable. Contacting Slack via /feedback (B) is not appropriate for standard admin tasks. Deactivation is not limited to Primary Org Owners only (D).

(Reference: Slack Administration Study Guide - User Lifecycle Management with SCIM)
