Pass Guaranteed 156-315.81 - Perfect Check Point Certified Security Expert R81 Reliable Exam Online

The exam outline will be changed according to the new policy every year, and the 156-315.81 questions torrent and other teaching software, after the new exam outline, we will change according to the syllabus and the latest developments in theory and practice and revision of the corresponding changes, highly agree with outline. After you choose our study materials, you can master the examination point from the 156-315.81 Guide question. Then, you will have enough confidence to pass your exam. As for the safe environment and effective product, why don't you have a try for our 156-315.81 question torrent, never let you down!

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q489-Q494):

NEW QUESTION # 489

How can you switch the active log file?

- A. Run fw logswitch on the Management Server
- B. Run fwm logswitch on the Management Server
- C. Run fw logswitch on the gateway
- D. Run fwm logswitch on the gateway

Answer: D

NEW QUESTION # 490

In R81 spoofing is defined as a method of

- A. Detecting people using false or wrong authentication logins
- B. Making packets appear as if they come from an authorized IP address.
- C. Disguising an illegal IP address behind an authorized IP address through Port Address Translation.
- D. Hiding your firewall from unauthorized users.

Answer: B

Explanation:

In R81, spoofing is defined as a method of making packets appear as if they come from an authorized IP address. Spoofing can be used by attackers to bypass security policies or hide their identity. Check Point firewalls use anti-spoofing mechanisms to prevent spoofed packets from entering or leaving the network.

NEW QUESTION # 491

Full synchronization between cluster members is handled by Firewall Kernel. Which port is used for this?

- A. UDP port 265
- B. UDP port 256
- C. TCP port 256
- D. TCP port 265

Answer: C

Explanation:

Explanation

Synchronization works in two modes:

Full Sync transfers all Security Gateway kernel table information from one cluster member to another. It is handled by the fwd daemon using an encrypted TCP connection on port 256.

Delta Sync transfers changes in the kernel tables between cluster members. Delta sync is handled by the Security Gateway kernel using UDP connections on port 8116.

NEW QUESTION # 492

What should the admin do in case the Primary Management Server is temporary down?

- A. Logon with SmartConsole to the Secondary Management Server and choose "Make Active" under Actions in the HA Management Menu
- B. The Secondary will take over automatically Change the IP in SmartConsole to logon to the private IP of the Secondary Management Server.
- C. Use the VIP in SmartConsole you always reach the active Management Server.
- D. Run the 'promote_util' to activate the Secondary Management server

Answer: C

Explanation:

Explanation

High Availability (HA) is a deployment scenario where two or more Security Management Servers are configured to work together as a cluster. One server acts as the Primary server and handles all management operations, while another server acts as the Secondary server and serves as a backup. If the Primary server fails, the Secondary server takes over and becomes active. The cluster members communicate using a Virtual IP (VIP) address, which is used by SmartConsole to connect to the active server. If the Primary server is temporarily down, the administrator does not need to do anything, as SmartConsole will automatically connect to the VIP address and reach the Secondary server that has become active. Therefore, the correct answer is A.

NEW QUESTION # 493

Session unique identifiers are passed to the web api using which http header option?

- A. Proxy-Authorization
- B. Application
- C. **X-chkp-sid**
- D. Accept-Charset

Answer: C

Explanation:

Session unique identifiers are passed to the web API using the X-chkp-sid HTTP header option. The web API is a service that runs on the Security Management Server and enables external applications to communicate with the Check Point management database using REST APIs. To use the web API, you need to create a session with the management server by sending a login request with your credentials. The management server will respond with a session unique identifier (SID) that represents your session. You need to pass this SID in every subsequent request to the web API using the X-chkp-sid HTTP header option. This way, the management server can identify and authenticate your session and perform the requested operations. Reference: Check Point R81 REST API Reference Guide

NEW QUESTION # 494

.....

We can find that the Internet is getting closer and closer to our daily life and daily work. We can hardly leave the Internet now, we usually use computer or iPad to work and learn. Inevitably, we will feel too tired if we worked online too long. You can see our 156-315.81 exam materials have three version, including PDF version, APP version and soft version, the PDF version support printing. You can free download part of 156-315.81 simulation test questions and answers of 156-315.81 exam dumps and print it, using it when your eyes are tired. It is more convenient for you to look and read while protect our eye. If you print the 156-315.81 exam materials out, you are easy to carry it with you when you out, it is to say that will be a most right decision to choose the 156-315.81, you will never regret it.
