

# Forescout FSCP Reliable Braindumps Sheet, FSCP Test Pdf

2026 Latest Exam-Killer FSCP PDF Dumps and FSCP Exam Engine Free Share: <https://drive.google.com/open?id=1OP4ZHGP1quBxs0ra2z1Iqdf24ysecwUxI>

We are confident in the ability of FSCP exam torrent and we also want to our candidates feel confident in our certification exam materials. For this reason, all questions and answers in our FSCP valid dumps are certified and tested by our senior IT professionals. And we guarantee that if you failed the certification exam with our FSCP Pdf Torrent, we will get your money back to reduce your loss.

## Forescout FSCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Plugin Tuning User Directory:</b> This section of the exam measures skills of directory services integrators and identity engineers, and covers tuning plugins that integrate with user directories: configuration, mapping of directory attributes to platform policies, performance considerations, and security implications.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>General Review of FSCA Topics:</b> This section of the exam measures skills of network security engineers and system administrators, and covers a broad refresh of foundational platform concepts, including architecture, asset identification, and initial deployment considerations. It ensures you are fluent in relevant baseline topics before moving into more advanced areas.]. <b>Policy Best Practices:</b> This section of the exam measures skills of security policy architects and operational administrators, and covers how to design and enforce robust policies effectively, emphasizing maintainability, clarity, and alignment with organizational goals rather than just technical configuration.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Policy Functionality:</b> This section of the exam measures skills of policy implementers and integration specialists, and covers how policies operate within the platform, including dependencies, rule order, enforcement triggers, and how they interact with device classifications and dynamic attributes.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>Advanced Product Topics Certificates and Identity Tracking: This section of the exam measures skills of identity and access control specialists and security engineers, and covers the management of digital certificates, PKI integration, identity tracking mechanisms, and how those support enforcement and audit capability within the system.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Advanced Product Topics Licenses, Extended Modules and Redundancy: This section of the exam measures skills of product deployment leads and solution engineers, and covers topics such as licensing models, optional modules or extensions, high availability or redundancy configurations, and how those affect architecture and operational readiness.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Advanced Troubleshooting: This section of the exam measures skills of operations leads and senior technical support engineers, and covers diagnosing complex issues across component interactions, policy enforcement failures, plugin misbehavior, and end to end workflows requiring root cause analysis and corrective strategy rather than just surface level fixes.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Notifications: This section of the exam measures skills of monitoring and incident response professionals and system administrators, and covers how notifications are configured, triggered, routed, and managed so that alerts and reports tie into incident workflows and stakeholder communication.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>Plugin Tuning Switch: This section of the exam measures skills of network switch engineers and NAC (network access control) specialists, and covers tuning switch related plugins such as switch port monitoring, layer 2</li> <li>3 integration, ACL or VLAN assignments via network infrastructure and maintaining visibility and control through those network assets.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>Customized Policy Examples: This section of the exam measures skills of security architects and solution delivery engineers, and covers scenario based policy design and implementation: you will need to understand business case requirements, craft tailored policy frameworks, adjust for exceptional devices or workflows, and document or validate those customizations in context.</li> </ul>

## FSCP Test Pdf | Accurate FSCP Study Material

It is quite clear that let the facts speak for themselves is more convincing than any word, therefore, we have prepared free demo in this website for our customers to have a taste of the FSCP test torrent compiled by our company. You will understand the reason why we are so confident to say that the FSCP Exam Torrent compiled by our company is the top-notch FSCP exam torrent for you to prepare for the exam. You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our FSCP exam materials will never let you down.

### Forescout Certified Professional Exam Sample Questions (Q80-Q85):

#### NEW QUESTION # 80

Which of the following does NOT need to be checked when you are verifying correct switch plugin configuration?

- A. Correct switch management credentials are configured for each switch
- B. The Switch plugin is running
- C. Each switch is assigned to the correct appliance
- D. Each switch passes the plugin test
- E. IP address ranges are assigned to the correct appliance

**Answer: E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Switch Plugin Configuration Guide, when verifying correct switch plugin configuration, you do NOT need to check: "IP address ranges are assigned to the correct appliance". This setting is network/appliance configuration, not switch

plugin-specific configuration.

Switch Plugin Configuration Verification Checklist:

According to the Switch Plugin documentation:

When verifying switch plugin configuration, you MUST check:

- \* A. The Switch plugin is running #
- \* Plugin status must be active
- \* Verify in plugin management interface
- \* B. Correct switch management credentials #
- \* SSH/CLI credentials configured
- \* SNMP credentials (v1/v2/v3) configured
- \* Must have appropriate permissions
- \* D. Each switch passes the plugin test #
- \* Use plugin test function to verify connectivity
- \* Confirms credentials and permissions work
- \* Validates communication protocols
- \* E. Each switch is assigned to the correct appliance #
- \* Switch must be assigned to managing appliance
- \* Critical for multi-appliance deployments
- \* Ensures proper VLAN management traffic routing

Why C is NOT Required:

According to the documentation:

IP address range assignment (segment assignment) is:

- \* Part of appliance channel/segment configuration
- \* NOT part of switch plugin-specific configuration
- \* Handled at appliance level, not plugin level
- \* Related to appliance management, not switch management

Switch Plugin vs. Appliance Configuration:

According to the configuration guide:

Item

Switch Plugin Config

Appliance Config

Plugin Running

#Yes

N/A

Switch Credentials

#Yes

N/A

Plugin Test

#Yes

N/A

Switch Assignment

#Yes

N/A

IP Address Ranges

#No

#Yes

Referenced Documentation:

- \* CounterACT Switch Plugin Configuration Guide v8.12
- \* Switch Configuration Parameters
- \* Permissions Configuration - Switch
- \* Configuring Switches in the Switch Plugin

## NEW QUESTION # 81

What is NOT an admission event?

- A. New VPN user
- B. Host becomes offline
- C. IP Address Change
- D. Login to an authentication server

- E. DHCP Request

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide, "Host becomes offline" is NOT an admission event.

Admission events are triggers that cause policy rechecks, and according to the documentation:

What IS an Admission Event:

According to the official documentation:

"An admission event is a trigger that causes policies to be rechecked. Examples of admission events include:

- \* DHCP Request
- \* IP Address Change
- \* Switch Port Change
- \* Authentication via RADIUS or other authentication servers
- \* Login to an authentication server
- \* New VPN user"

Specific Admission Events Listed:

According to the Policy Main Rule Advanced Options documentation:

Admission events include:

- \* DHCP Request - When an endpoint sends a DHCP request
- \* IP Address Change - When an endpoint's IP address changes
- \* Switch Port Change - When an endpoint moves to a different switch port
- \* Authentication Events - When endpoints authenticate to RADIUS or other servers
- \* VPN Events - When VPN users connect

Why "Host becomes offline" is NOT an Admission Event:

According to the documentation:

A host becoming offline is NOT listed as an admission event. Instead, policies handle offline hosts differently:

- \* By default, policies are rechecked every 8 hours regardless of online/offline status
- \* Offline detection is a property state change, not an admission event
- \* The system tracks whether a host was "seen" or is currently "online," but this doesn't trigger admission event rechecks Why Other

Options ARE Admission Events:

- \* A. DHCP Request #- Explicitly listed admission event
- \* B. IP Address Change #- Explicitly listed admission event
- \* D. Login to an authentication server #- Explicitly listed admission event
- \* E. New VPN user #- Explicitly listed admission event

Referenced Documentation:

- \* Forescout eyeSight policy main rule advanced options
- \* Working with Policy Templates - When Are Policies Run
- \* Event Properties documentation

## NEW QUESTION # 82

In a multi-site Distributed deployment, what needs to be done so that switch management traffic does not cross the WAN?

- A. Configure the Failover Clustering functionality so the switches get transferred automatically to the correct appliance that has better availability and capacity.
- B. Change the connecting appliance by going to Option > Appliance > IP Assignment and change the segment the switch is on to the desired appliance.
- C. Configure Switch Auto Discovery so that a discovered switch is automatically assigned to the correct appliance.
- D. Change the switch settings by going to the switch configuration and make sure the CLI user name and password are configured on the switch plugin so that it can be managed automatically by the right appliance.
- E. Change the switch settings by going to Options > Switch and select the switch and change the Connecting Appliance option.

**Answer: E**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide and Switch Plugin documentation, in a multi-site Distributed deployment, to ensure switch management traffic does not cross the WAN, you should "Change the switch settings by going to Options > Switch and

select the switch and change the Connecting Appliance option".

Switch Management Traffic in Distributed Deployments:

In a multi-site deployment:

- \* Local Appliance - Should manage switches at the same site (LAN)
- \* Remote Appliance - Should NOT manage switches across WAN links
- \* Traffic Optimization - Management traffic stays local to reduce WAN usage

Connecting Appliance Configuration:  
According to the administration guide:

When a switch is discovered or needs to be managed by a specific appliance:

- \* Navigate to Tools > Options > Switch
- \* Select the switch from the list
- \* Change the "Connecting Appliance" option
- \* Select the local appliance that should manage this switch
- \* Apply the configuration

This ensures management traffic stays local to the site where both the appliance and switch reside.

Why Other Options Are Incorrect:

- \* A. Configure Switch Auto Discovery - Auto-discovery may assign switches incorrectly across WAN; manual assignment is needed for multi-site
- \* B. Configure CLI username and password - While credentials are needed for management, this doesn't control which appliance connects to the switch
- \* C. Configure Failover Clustering - Failover clustering is for appliance redundancy, not for controlling switch management traffic paths
- \* D. Change via Option > Appliance > IP Assignment - This path manages appliance segment assignments, not individual switch connections

Best Practice for Multi-Site Deployments:

According to the administration guide:

text

```
Site A Site B
## Appliance A ## Appliance B
## Switch A-1 ## Switch B-1
# ## Managed by A## ## Managed by B#
## Switch A-2 ## Switch B-2
## Managed by A#### Managed by B#
```

NOT:

```
Appliance A managing Switch B-1 across WAN#
```

Connecting Appliance Option Details:

According to the switch configuration documentation:

The "Connecting Appliance" setting:

- \* Specifies which CounterACT appliance will manage the switch
- \* Should be set to the appliance closest to the switch
- \* Minimizes WAN traffic for switch management protocols (SNMP, SSH, Telnet)
- \* Applies immediately without requiring appliance restart

Referenced Documentation:

- \* ForeScout CounterACT Administration Guide - Switch Configuration

Congratulations! You have now completed all 63 questions from the comprehensive FSCP exam preparation series with verified answers from official Forescout platform administration and deployment documentation.

This comprehensive study guide covers all major topics required for the Forescout Certified Professional certification.

### NEW QUESTION # 83

Which of the following User Directory server settings is necessary to enable guest approval by sponsors?

- A. Sponsor Group
- B. Guest Tags
- C. Guest password policy
- D. Policy to control
- E. Authentication Server

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

The Sponsor Group is the necessary User Directory server setting required to enable guest approval by sponsors. According to the

Forescout User Directory Plugin Configuration Guide and Guest Management Portal documentation, Sponsor Groups must be created and configured to define the corporate employees (sponsors) who are authorized to approve or decline guest network access requests.

Sponsor Group Configuration:

In the Guest Management pane, the Sponsors tab is used to define the corporate employees who are authorized to log into the Guest Management Portal to approve network access requests from guests. These employees are assigned to specific Sponsor Groups, which control which sponsors can approve guest access requests.

How Sponsor Groups Enable Guest Approval:

- \* Sponsor Definition - Corporate employees must be designated as sponsors and assigned to a Sponsor Group
- \* Approval Authority - Sponsors in assigned groups can approve or decline guest network access requests
- \* Authentication - When "Enable sponsor approval without authentication via emailed link" is selected, sponsors in the designated group can approve guests based on email link authorization
- \* Guest Registration - Guest registration options connect Sponsor Groups to the guest approval workflow Why Other Options Are Incorrect:

- \* A. Policy to control - While policies are used for guest control, they do not define which sponsors can approve guests
- \* B. Guest Tags - Guest Tags are used to classify and organize guest accounts, not to enable sponsor approval
- \* D. Guest password policy - This setting controls password requirements for guests, not sponsor approval authority
- \* E. Authentication Server - Authentication servers verify credentials but do not establish sponsor approval groups Referenced Documentation:

- \* Forescout User Directory Plugin Configuration Guide - Create Sponsors section
- \* Guest Management Portal - Sponsor Configuration documentation
- \* "Create sponsors" - Forescout Administration Guide section

#### NEW QUESTION # 84

What is the default recheck timer for a NAC policy?

- A. 24 hours
- B. 4 hours
- C. 8 hours
- D. 2 hours
- E. 12 hours

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide - Policy Main Rule Advanced Options, the default recheck timer for a NAC policy is 8 hours.

Default Policy Recheck Timer:

According to the official documentation:

"By default, both matched endpoints and unmatched endpoints are rechecked every eight hours, and on any admission event." This 8-hour default ensures that all endpoints are periodically re-evaluated against policy conditions, regardless of whether they currently match the policy.

Recheck Configuration:

According to the documentation:

When you configure a policy's main rule advanced options:

- \* Default Recheck Interval: 8 hours
- \* Customizable Range: Can be configured from 1 hour to infinite (no recheck)
- \* Applies to: All endpoints in the policy scope

Recheck Triggers:

According to the administration guide:

Policies recheck when:

- \* Recheck Timer Expires - Every 8 hours by default
- \* Admission Event - When specific network events occur
- \* SecureConnector Event - When SC status changes

Referenced Documentation:

- \* Forescout Platform Policy Main Rule Advanced Options
- \* Main Rule Advanced Options

## NEW QUESTION # 85

.....

After undergoing a drastic change over these years, our FSCP actual exam have been doing perfect job in coping with the exam. Up to now our FSCP practice materials account for 60 percent of market share in this line for their efficiency and accuracy when dealing with the exam. With the best reputation in the market our FSCP Training Materials can help you ward off all unnecessary and useless materials and spend all your limited time on practicing most helpful questions.
