In the era of informational globalization, the world has witnessed climax of science and technology development, and has enjoyed the prosperity of various scientific blooms. In 21st century, every country had entered the period of talent competition, therefore, we must begin to extend our PCEP-30-02 personal skills, only by this can we become the pioneer among our competitors. At the same time, our competitors are trying to capture every opportunity and get a satisfying job. In this case, we need a professional PCEP-30-02 Certification, which will help us stand out of the crowd and knock out the door of great company.

Our professional experts have carefully compiled our PCEP-30-02 practice braindumps to be the best seller in the market. The information is provided in the form of our PCEP-30-02 exam questions and answers, following the style of the real exam paper pattern. So if you buy our PCEP-30-02 training guide, you will find that it is easy to pass the exam for it is exam-oriented. What is more, you will learn a lot of work skills according to the latest information.

>> PCEP-30-02 Intereactive Testing Engine <<

High Pass-Rate PCEP-30-02 Intereactive Testing Engine Help You to Get Acquainted with Real PCEP-30-02 Exam Simulation

Maybe you want to get the PCEP-30-02 certification, but daily work and long-time traffic make you busier to improve yourself. Thanks to our PCEP-30-02 training materials, you can learn for your certification anytime, everywhere. If you get our products, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our PCEP-30-02 Study Guide, you will easily pass the PCEP-30-02 examination and gain more confidence.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q31-Q36):

NEW QUESTION # 31

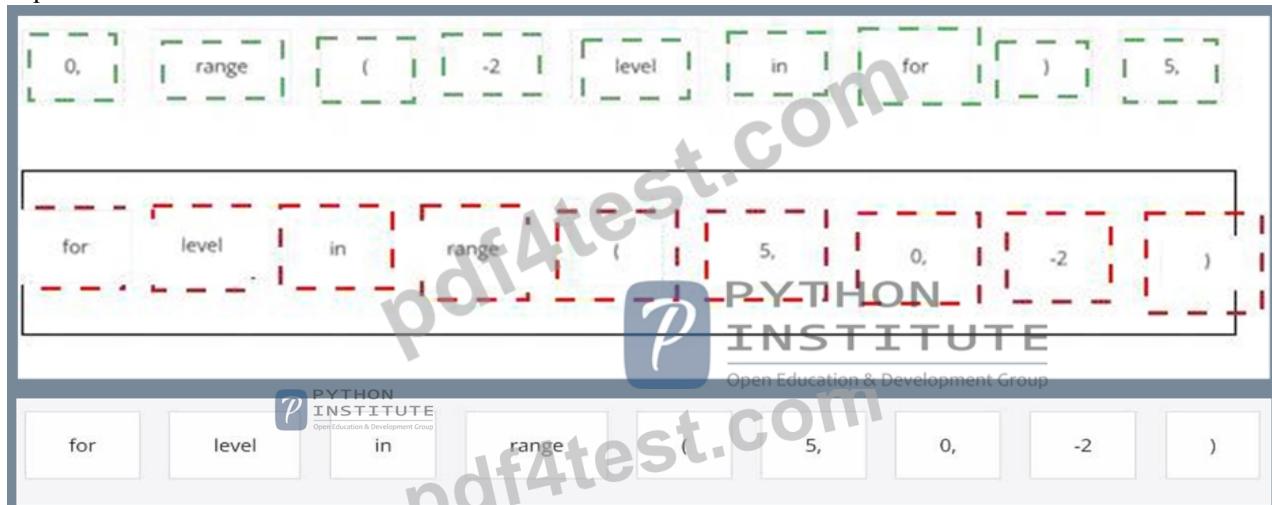

Arrange the code boxes in the correct positions in order to obtain a loop which executes its body with the level variable going through values 5, 1, and 1 (in the same order).

0,	range	(-2	level	in	for)	5,
----	-------	---	----	-------	----	-----	---	----

Answer:

Explanation:

The diagram illustrates the correct arrangement of code blocks for the loop. The top row shows the individual blocks: 0, range, (, -2, level, in, for,), and 5,. The middle row shows the loop structure: for level in range(5, 0, -2). The bottom row shows the available blocks: for, level, in, range, (, 5, 0, -2,), and).

NEW QUESTION # 32

Which of the following expressions evaluate to a non-zero result? (Select two answers.)

- A. $1 ** 3 / 4 - 1$
- B. $2 ** 3 / A - 2$
- C. $1 * 4 // 2 ** 3$
- D. $4 / 2 ** 3 - 2$

Answer: B,D

Explanation:

In Python, the $**$ operator is used for exponentiation, the $/$ operator is used for floating-point division, and the $//$ operator is used for integer division. The order of operations is parentheses, exponentiation, multiplication/division, and addition/subtraction. Therefore, the expressions can be evaluated as follows:

A. $2 ** 3 / A - 2 = 8 / A - 2$ (assuming A is a variable that is not zero or undefined) B. $4 / 2 ** 3 - 2 = 4 / 8 - 2 = 0.5 - 2 = -1.5$ C. $1 * 4 / 2 ** 3 = 1 / 8 = 0.125$ D. $4 // 2 ** 3 = 4 // 8 = 0$ Only expressions A and B evaluate to non-zero results.

NEW QUESTION # 33

What is the expected output of the following code?

```
def runner(brand, model="", year=2021, convertible=False):
    return (brand, str(year), str(convertible))

P PYTHON
INSTITUTE
print(runner(model="Furious", brand = "Ampere")[1][1])
```

- A. 0
- B. ('Ampere', '2021', 'False')
- C. 1
- D. The code raises an unhandled exception.

Answer: A

NEW QUESTION # 34

Arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0.

speed : < if 50.0

P PYTHON
INSTITUTE
Open Education & Development Group

Answer:

Explanation:

speed < if 50.0

if speed < 50.0 :

Explanation

if

speed

<

50.0

:

One possible way to arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the speed variable is less than 50.0 is:

if speed < 50.0:

```
print("The speed is low.")
```

This code uses the if keyword to create a conditional statement that checks the value of the variable speed. If the value is less than 50.0, then the code will print "The speed is low." to the screen. The print function is used to display the output. The code is indented to show the block of code that belongs to the if condition.

You can find more information about the if statement and the print function in Python in the following references:

Python If... Else

Python Print Function

NEW QUESTION # 35

What is the expected output of the following code?

```
def traverse(stop):  
    if stop == 0:  
        return 0  
    else:  
        return stop + traverse(stop - 1)
```

```
print(traverse(2))
```

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Explanation

The code snippet that you have sent is using the count method to count the number of occurrences of a value in a list. The code is as follows:

```
my_list = [1, 2, 3, 4, 5] print(my_list.count(1))
```

The code starts with creating a list called "my_list" that contains the numbers 1, 2, 3, 4, and 5. Then, it uses the print function to display the result of calling the count method on the list with the argument 1. The count method is used to return the number of times a value appears in a list. For example, my_list.count(1) returns 1, because 1 appears once in the list.

The expected output of the code is 1, because the code prints the number of occurrences of 1 in the list.

Therefore, the correct answer is D. 1.

NEW QUESTION # 36
