

Free PDF Quiz Fantastic CCDAK - Verified Confluent Certified Developer for Apache Kafka Certification Examination Answers

P.S. Free & New CCDAK dumps are available on Google Drive shared by VCEPrep: https://drive.google.com/open?id=1xQKrcshYIL_5AAb4BBJf0GVZz5NjZ_1A

When you decide to buy VCEPrep actual Confluent CCDAK exam dumps, you automatically boost your chances of Confluent Certified Developer for Apache Kafka Certification Examination CCDAK exam success. In Confluent CCDAK exam product, you can encounter Confluent CCDAK exam questions that are present in the Confluent CCDAK certification exam. This helps you memorize actual CCDAK exam questions beforehand and clear the CCDAK Certification test on the first attempt. We offer CCDAK real questions in Confluent CCDAK PDF questions files, CCDAK desktop practice test software, and web-based practice exam. Read on to learn more about the top features of our Confluent Certified Developer for Apache Kafka Certification Examination CCDAK PDF dumps file, desktop Confluent CCDAK practice exam software, and a web-based CCDAK practice test.

Confluent CCDAK or Confluent Certified Developer for Apache Kafka Certification Examination is a certification exam designed for developers who want to demonstrate their expertise in Apache Kafka. Apache Kafka is an open-source distributed event streaming platform that is used to build real-time data pipelines and streaming applications. Confluent Certified Developer for Apache Kafka Certification Examination certification exam is conducted by Confluent, a company that provides a complete event streaming platform built on Apache Kafka.

Confluent CCDAK Certification Exam is an industry-recognized certification that helps developers advance their careers and demonstrate their expertise in Apache Kafka. Confluent Certified Developer for Apache Kafka Certification Examination certification is offered by Confluent, a leading company in the Apache Kafka ecosystem. Confluent Certified Developer for Apache Kafka Certification Examination certification is a valuable asset for developers who want to work with Kafka-based applications and solutions, and it is highly regarded by organizations that use Kafka for their data processing needs. Confluent Certified Developer for Apache Kafka Certification Examination certification demonstrates a developer's proficiency in Kafka and helps them stand out in a competitive job market.

Achieving the CCDAK Certification demonstrates that an individual has a deep understanding of Kafka technology and is capable of developing Kafka-based applications. Confluent Certified Developer for Apache Kafka Certification Examination certification is a valuable asset for developers who work with Kafka and want to advance their careers. It is also a valuable asset for organizations that use Kafka technology, as it ensures that their developers have the necessary skills to develop and maintain Kafka-based applications.

CCDAK Test Papers | CCDAK Instant Discount

If our Confluent Certified Developer for Apache Kafka Certification Examination guide torrent can't help you pass the exam, we will refund you in full. If only the client provide the exam certificate and the scanning copy or the screenshot of the failure score of CCDAK exam, we will refund the client immediately. The procedure of refund is very simple. If the clients have any problems or doubts about our CCDAK Exam Materials you can contact us by sending mails or contact us online and we will reply and solve the client's problems as quickly as we can.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following is a push query?

- A. `SELECT windowstart, windowend, item_id, SUM(quantity)
FROM orders
WINDOW TUMBLING (SIZE 20 SECONDS)
GROUP BY item_id
EMIT CHANGES;`
- B. `CREATE TABLE LEFT_TABLE (ID BIGINT PRIMARY KEY, NAME varchar, VALUE bigint) WITH
(kafka_topic='left_topic', value_format='JSON', partitions=4);`
- C. `SELECT *
FROM NUMBER_OF_TESTS
WHERE ID='10';`
- D. `CREATE STREAM STUDENTS (ID STRING KEY, SCORE INT)
WITH (kafka_topic='students_topic', value_format='JSON', partitions=4);`

Answer: A

NEW QUESTION # 23

I am producing Avro data on my Kafka cluster that is integrated with the Confluent Schema Registry. After a schema change that is incompatible, I know my data will be rejected. Which component will reject the data?

- A. The Confluent Schema Registry
- B. The Kafka Producer itself
- C. The Kafka Broker
- D. Zookeeper

Answer: A

Explanation:

The Confluent Schema Registry is your safeguard against incompatible schema changes and will be the component that ensures no breaking schema evolution will be possible. Kafka Brokers do not look at your payload and your payload schema, and therefore will not reject data

NEW QUESTION # 24

Which two statements are correct when assigning partitions to the consumers in a consumer group using the assign() API? (Select two.)

- A. All topics must have the same number of partitions to use assign() API.
- B. The consumer group will not be rebalanced if a consumer leaves the group.
- C. It is mandatory to subscribe to a topic before calling assign() to assign partitions.
- D. The consumer chooses which partition to read without any assignment from brokers.

Answer: B,D

Explanation:

Using `assign()` gives manual control over partition assignment. In this mode:

B is true: The application chooses partitions directly without involving the group coordinator.

C is true: Since no group coordination occurs, no rebalancing happens if a consumer dies.

From Kafka Consumer API Docs:

"`assign()` manually assigns a list of partitions to this consumer. No coordination takes place and no rebalancing is triggered." A is false: `subscribe()` and `assign()` are mutually exclusive.

D is incorrect: Partitions don't need to be equal across topics.

Reference: Kafka Consumer Java API > `assign()` and `subscribe()`

NEW QUESTION # 25

What are two examples of performance metrics?

(Select two.)

- A. Number of active user sessions
- B. **incoming-byte-rate**
- C. Number of active users
- D. total-login-attempts
- E. Time of last failed login
- F. **fetch-rate**

Answer: B,F

Explanation:

`fetch-rate`: Measures how frequently consumers fetch data - critical for monitoring throughput.

`incoming-byte-rate`: Shows how much data is being written to the broker per second - a key producer-side metric.

From Kafka JMX Metrics Guide:

"`fetch-rate`, `incoming-byte-rate`, `request-latency` are key performance metrics for producers and consumers." B, C, E, and F are application-layer business metrics, not Kafka performance metrics.

Reference: Kafka Monitoring > JMX Metrics

NEW QUESTION # 26

An ecommerce website maintains two topics - a high volume "purchase" topic with 5 partitions and low volume "customer" topic with 3 partitions. You would like to do a stream-table join of these topics. How should you proceed?

- A. **Model customer as a GlobalKTable**
- B. Do a KStream/ KTable join after a repartition step
- C. Repartition customer topic to have 5 partitions
- D. Repartition the purchase topic to have 3 partitions

Answer: A

Explanation:

In case of KStream-KStream join, both need to be co-partitioned. This restriction is not applicable in case of join with GlobalKTable, which is the most efficient here.

NEW QUESTION # 27

.....

Passing the Confluent CCDAK is the primary concern. To pass the hard CCDAK exam on the first try, you must invest more time, effort, and money. To pass the CCDAK Exam, you must have the right Confluent Certified Developer for Apache Kafka Certification Examination CCDAK Exam Dumps, which are quite hard to get online. Get it right away to begin preparing. VCEPrep is a reputable platform that has been providing valid, real, updated, and error-free Confluent Certified Developer for Apache Kafka Certification Examination CCDAK Exam Questions.
