Newest Salesforce Salesforce-Data-Cloud Practice Questions in PDF Format for Quick Preparation

We provide well-curated question answers for Salesforce-Data-Cloud at Real4dumps. We take 100% responsibility for validity of Salesforce-Data-Cloud questions dumps. If you are using our Salesforce-Data-Cloud Exam Dumps for Salesforce-Data-Cloud, you will be able to pass the any Salesforce-Data-Cloud exam with high marks.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q142-Q147):

NEW QUESTION # 142

A customer has a calculated insight about lifetime value.
What does the consultant need to be aware of if the calculated insight needs to be modified?

- A. New measures can be added.
- B. Existing measures can be removed.
- C. New dimensions can be added.
- D. Existing dimensions can be removed.

Answer: C

Explanation:

A calculated insight is a multidimensional metric that is defined and calculated from data using SQL expressions. A calculated insight can include dimensions and measures. Dimensions are the fields that are used to group or filter the data, such as customer ID, product category, or region. Measures are the fields that are used to perform calculations or aggregations, such as revenue, quantity, or average order value. A calculated insight can be modified by editing the SQL expression or changing the data space. However, the consultant needs to be aware of the following limitations and considerations when modifying a calculated insight¹²:

Existing dimensions cannot be removed. If a dimension is removed from the SQL expression, the calculated insight will fail to run and display an error message. This is because the dimension is used to create the primary key for the calculated insight object, and removing it will cause a conflict with the existing data.

Therefore, the correct answer is B.

New dimensions can be added. If a dimension is added to the SQL expression, the calculated insight will run and create a new field for the dimension in the calculated insight object. However, the consultant should be careful not to add too many dimensions, as this can affect the performance and usability of the calculated insight.

Existing measures can be removed. If a measure is removed from the SQL expression, the calculated insight will run and delete the field for the measure from the calculated insight object. However, the consultant should be aware that removing a measure can affect the existing segments or activations that use the calculated insight.

New measures can be added. If a measure is added to the SQL expression, the calculated insight will run and create a new field for the measure in the calculated insight object. However, the consultant should be careful not to add too many measures, as this can affect the performance and usability of the calculated insight. NEW QUESTION # 143

Cumulus Financial is currently using Data Cloud and ingesting transactional data from its backend system via an S3 Connector in upsert mode. During the initial setup six months ago, the company created a formula field in Data Cloud to create a custom classification. It now needs to update this formula to account for more classifications.

What should the consultant keep in mind with regard to formula field updates when using the S3 Connector?

- A. Data Cloud will initiate a full refresh of data from S3 and will update the formula on all records.
- B. Data Cloud will update the formula for all records at the next incremental upsert refresh.
- C. Data Cloud will only update the formula on a go-forward basis for new records.
- D. Data Cloud does not support formula field updates for data streams of type upsert.

Answer: A

NEW QUESTION # 144

Which data model subject area defines the revenue or quantity for an opportunity by product family?

- A. Product
- B. Party
- C. Sales Order
- D. Engagement

Answer: C

Explanation:

The sales order subject area defines the revenue or quantity for an opportunity by product family. It also includes information about the opportunity stage, close date, and owner. References:

NEW QUESTION # 145

Which type of measures with aggregate functions are supported?

- A. Numeric
- B. Date
- C. Text
- D. Boolean

Answer: A

Explanation:

Explanation

Numeric is the only type of measures that support aggregate functions. Measures are numeric fields that can be aggregated using functions such as SUM, AVG, MIN, MAX, or COUNT. For example, you can use a measure to calculate the total revenue or the average order value from your data. Date, Text, and Boolean are not types of measures, but types of dimensions. Dimensions are fields that can be used to group or filter data, but not to perform calculations. References: Measures and Dimensions

NEW QUESTION # 146

What does it mean to build a trust-based, first-party data asset?

- A. Pass the trust-based compliance rules as a first-party data asset is added to Data Cloud
- **B. Provide transparency and security for data gathered from individuals who provide consent for its use and receive value in exchange**
- C. Obtain competitive data from reliable sources through interviews, surveys, and polls
- D. Ensure opt-in consents are collected for all email marketing as required by law

Answer: B

Explanation:

This is what it means to build a trust-based, first-party data asset. It involves respecting the privacy and preferences of individuals who share their data with an organization and ensuring that the data is used in a responsible and ethical way.
