2026 Valid Best AP-219 Preparation Materials Help You Pass AP-219 Easily

Where there is life, there is hope. Never abandon yourself. You still have many opportunities to counterattack. If you are lack of knowledge and skills, our AP-219 study materials are willing to offer you some help. Actually, we are glad that our study materials are able to become you top choice. In the past ten years, we always hold the belief that it is dangerous if we feel satisfied with our AP-219 Study Materials and stop renovating. Luckily, we still memorize our initial determination.

Salesforce Order Management Administrator Accredited Professional

Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which set of conditions is required for an Order Summary object to be created?

- A. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.
- **B. An Order is created, the Create Order Summary Process is installed and the Create Order Summary Process is active**
- C. An Order is created, its status is set to Draft, Create OrderSummaryFlow is installed and Create OrderSummary Flow is activated.
- D. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and the Create OrderSummary Process is installed.

Answer: B

Explanation:

The Order Summary object is a customobject that stores information about an order, such as the total amount, the number of items, and the fulfillment status. The Order Summary object is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. The process and the flow are part of the Order Management package and must be installed and activated for the order summary object to be created. NEW QUESTION # 77

How can an administrator allow an org to publish a change set to another org?

- A. In the target org: Open Deployment Settings, Select the environments to allow publishing from and Move them to the Enabled list
- **B. In the target org: Open Deployment Settings, Click Edit next to the source org. Select Allow Inbound Changes and Click Save**
- C. In the source org: open Deployment settings, Select the environments to publish to and Move them to the enabled list
- D. In the source org: Open Publish Settings, Select the checkbox next to the environment to publish to and Click Save

Answer: B

NEW QUESTION # 78

Which two order management objects have their s set to hidden by default?
(choose 2)

- A. Accounts
- **B. Order Delivery Method**
- **C. Sales Location**
- D. Fulfillment orders
- E. Locations

Answer: B,C

NEW QUESTION # 79

An administrator is creating a flow to manage order fulfillment. The administrator creates a fault path to handle a possible error. What object record should the administrator create in the fault path to notify users of an error?

- A. Fulfillment Error
- B. Order Summary Exception
- C. OrderError
- **D. Process Exception**

Answer: D

Explanation:

The object record that the administrator should create in the fault path to notify users of an error is Process Exception. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. Verified

NEW QUESTION # 80

A developer needs to create a scheduled job in an external system to move Order data into a Salesforce org every 24 hours. In which two ways can this off-platform job be established without additional third-party tools?

- A. Set up an SFTP server as a waystation. drop the files there using the off-platform job and schedule a job in-platform to process the file
- **B. Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs**
- C. Create a job in the org (on-platform) to drop a file of existing data. Use the off-platform machine to generate a file and identify the details between the two. Push the changes to the org's "Import" directory
- **D. Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data**

Answer: B,D

Explanation:

Two ways that this off-platform job can be established without additional third-party tools are:

Install a minimal set of dev tools on a machine such as the Command Line Interface (CLI) and create appropriate scripts to import files containing the data. The CLI is a tool that allows developers to interact with Salesforce from the command line. The developer can use the CLI to create scripts that use commands such as `force:data:bulk:upsert` or `force:data:tree:import` to import data from CSV or JSON files into Salesforce.

Authorize a machine against the Salesforce org's APIs with appropriate security measures and create a script to call the APIs. The APIs are interfaces that allow developers to access data and functionality in Salesforce from external systems. The developer can use the APIs, such as REST API or Bulk API, to create a script that authenticates with Salesforce using OAuth 2.0 or JWT, and then performs operations such as insert, update, or delete on Order data.
