It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 5	<ul style="list-style-type: none"> • Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q83-Q88):

NEW QUESTION # 83

You are cleaning up sandbox environments for a company.

The company requires data to be cleared from the environments each time an extension is published.

You need to configure the launch.json file.

Which schemaUpdateMode property should you set?

- A. Recreate
- B. ForceUpgrade
- C. Synchronize
- D. ForceSync

Answer: A

Explanation:

In the context of cleaning up sandbox environments for a company where data needs to be cleared each time an extension is published, the schemaUpdateMode property in the launch.json file should be set to Recreate (D). Setting this property to Recreate ensures that every time the extension is published, the existing tables and data are dropped, and then the tables are recreated based on the current extension's schema. This mode is particularly useful in development and testing environments where you need a clean slate for testing each version of the extension without the remnants of previous data affecting the outcomes. It's important to use this setting cautiously, as it results in the loss of all existing data in the tables defined by the extension, which is suitable for a sandbox environment but not for production environments.

NEW QUESTION # 84

You have the following XML file sample for the Items list:

You plan to create the next XML file by using an XMLport object.

You need to complete the code segment to export the file in the required format How should you complete the code segment? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

Explanation:

NEW QUESTION # 85

A company is examining Connect apps and Add-on apps for use with Business Central.

You need to describe the development language requirements for Connect apps and Add-on apps.

How should you describe the app language requirements? To answer, move the appropriate app types to the correct descriptions.

You may use each app type once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

* Developed by using any coding language: Connect app

* Developed by using AL language in Visual Studio Code: Add-on app

In Microsoft Dynamics 365 Business Central, there are distinct types of applications that can be developed:

Connect apps and Add-on apps. Each has its own development language requirements:

* Connect apps:

* Connect apps are designed to connect Business Central with external services or applications.

They are often developed using a variety of programming languages, not limited to the AL language, and can be hosted outside of the Business Central environment. Therefore, when a description states that the app is developed using any coding language, it generally refers to a Connect app. This type of app integrates with Business Central through APIs and web services.

* Add-on apps:

* Add-on apps are built to extend the functionality of Business Central within the application itself.

These are developed using the AL language, which is the programming language for Business Central, and they are created and managed within the Visual Studio Code environment with the AL Language extension. An Add-on app is typically a Business Central extension that is directly installed into the Business Central environment.

The language and environment used for developing these apps are key differentiators between Connect apps and Add-on apps.

NEW QUESTION # 86

You need to access the RoomsAPI API from the canvas app.

What should you do?

- A. Use the default API configuration in Business Central
- B. Enable the APIs for the Business Central online environment.
- C. Include in the extension a codeunit of type Install that publishes RoomsAPI.
- D. Open the Web Services page and publish the RoomsAPI page as a web service.

Answer: D

NEW QUESTION # 87

You need to provide the endpoint to the PMS provider for the RoomsAPI page.

How should you complete the API page endpoint? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point
