Candidates who become EXIN CDCP certified demonstrate their worth in the EXIN field. The Certified Data Centre Professional (CDCP) (CDCP) certification is proof of their competence and skills. This is a highly sought-after skill in large EXIN companies and makes a career easier for the candidate. To become certified, you must pass the Certified Data Centre Professional (CDCP) (CDCP) certification exam. For this task, you need high-quality and accurate Certified Data Centre Professional (CDCP) (CDCP) exam dumps. We have seen that candidates who study with outdated Certified Data Centre Professional (CDCP) (CDCP) practice material don't get success and lose their resources.

Our CDCP study materials are full of useful knowledge, which can meet your requirements of improvement. Also, it just takes about twenty to thirty hours for you to do exercises of the EXIN CDCP Study Guide. The learning time is short but efficient. You will elevate your ability in the shortest time with the help of our EXIN CDCP preparation questions.

## CDCP Exam Dumps & CDCP Dumps Guide & CDCP Best Questions

Being anxious for the exam ahead of you? Have a look of our CDCP practice materials please. Presiding over the line of CDCP practice materials over ten years, our experts are proficient as elites who made our CDCP practice materials, and it is their job to officiate the routines of offering help for you. All points are predominantly related with the exam ahead of you. Every page is full of

well-turned words for your reference related wholly with the real exam

## EXIN CDCP Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.</li></ul>   |
| Topic 2 | <ul style="list-style-type: none"><li>Equipment Racks: It discusses power rail</li><li>strip options, security considerations, and rack standards, properties and selection criteria.</li></ul>   |
| Topic 3 | <ul style="list-style-type: none"><li>Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).</li></ul>   |
| Topic 4 | <ul style="list-style-type: none"><li>Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.</li></ul>  |
| Topic 5 | <ul style="list-style-type: none"><li>Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.</li></ul>   |
| Topic 6 | <ul style="list-style-type: none"><li>Fire Safety</li><li>Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.</li></ul> |
| Topic 7 | <ul style="list-style-type: none"><li>Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).</li></ul>  |
| Topic 8 | <ul style="list-style-type: none"><li>Water Supply: This topic is all about water supply techniques and application areas.</li></ul>  |

## EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q74-Q79):

### NEW QUESTION # 74

Escape route signage should be placed where?

- A. At every door including riser doors, doors of storage closets etc.
- B. At every door providing a pathway**
- C. Only at emergency escape doors
- D. Only at the main entrance of the data centre building

### Answer: B

Explanation:

Escape route signage should be placed at every door providing a pathway to the exit or the assembly area, according to the CDCP Preparation Guide<sup>1</sup> and the EU Safety/Health Signs Directive<sup>2</sup>. Escape route signage is used to guide the occupants of the data centre from wherever they are in the building, via a place of relative safety (the escape route), to the place of ultimate safety (the assembly area). Escape route signage should not be limited to only emergency escape doors or the main entrance of the data centre building, as these may not be accessible or visible from all locations. Escape route signage should also not include doors that do not lead to the exit or the assembly area, such as riser doors, doors of storage closets, or doors of other rooms, as these may confuse or mislead the occupants. Escape route signage should be placed at every door that provides a pathway to the exit or the assembly area, and should indicate the direction and distance of the escape route using pictograms, arrows, and words. Escape route signage should also be designed and installed in accordance with the relevant standards and codes, such as BS 5499 and ISO 7010.

References:

1: CDCP Preparation Guide, page 24, section 2.4.3 2: EU Safety/Health Signs Directive<sup>3</sup>, page 1, section 1

### NEW QUESTION # 75

Measuring "Business Values" begins first with.

- A. Physical Infrastructure
- **B. Budget**
- C. Network
- D. Topology

**Answer: B**

Explanation:

Measuring "Business Values" begins first with budgeting and identifying the costs associated with the project.

This includes understanding the economic impact of the project, such as the cost of labor, materials, and other resources. It is also important to evaluate the return on investment (ROI) of the project, which will help to determine its overall value. Additionally, it is important to consider the long-term impact of the project and its potential to add value to the business in the future.

#### NEW QUESTION # 76

Which one of the following is an Audible Signaling and Notification Device?

- A. Strobes
- **B. Sirens**
- C. Clocks
- D. Alarms

**Answer: B**

Explanation:

According to the CDCP® Preparation Guide, an audible signaling and notification device is a device that produces a sound to alert or notify the occupants of a data center of an event or condition. Sirens are examples of such devices, as they can emit loud and distinctive tones to warn of fire, emergency, or security incidents.

Strobes, on the other hand, are visual signaling and notification devices that produce flashes of light to attract attention or convey information. Alarms and clocks are not specific types of devices, but rather general terms that can refer to various audible or visual devices.

#### NEW QUESTION # 77

Sprinkler heads used in computer rooms activate at what temperature?

- **A. 57 °C (135 °F)**
- B. 70 °C (158 °F)
- C. 27 °C (81 °F)
- D. Only on direct contact with a flame

**Answer: A**

Explanation:

Sprinkler heads used in computer rooms activate at 57 °C (135 °F), which is the standard temperature rating for ordinary sprinklers. This is the temperature at which the heat-sensitive element of the sprinkler head, such as a glass bulb or a fusible link, breaks or melts, allowing water to flow from the sprinkler. Sprinkler heads are designed to activate only when exposed to a fire, not to ambient temperature fluctuations. Therefore, sprinkler heads should be installed at a sufficient distance from the heat sources, such as servers, racks, or ducts, to avoid accidental activation. Sprinkler heads should also be selected and installed in accordance with the relevant standards and codes, such as NFPA 13 and NFPA 75.

#### NEW QUESTION # 78

Which one of the following is a factor that can affect Availability and Reliability?

- A. Inadequate Cooling
- B. Attenuation
- C. Employee Salaries
- D. Radio Active Waves

**Answer: A**

Explanation:

Availability and reliability are two important aspects of data centre performance that measure how often the system is operational and how dependable it is. According to the EPI Data Centre Framework, availability is the percentage of time that a system or component is in an operable state, while reliability is the probability that a system or component will perform its required function under given conditions for a specified period of time. Both availability and reliability can be affected by various factors, such as design, maintenance, human error, power supply, security, etc. One of the factors that can have a significant impact on both availability and reliability is cooling. Cooling is essential for maintaining the optimal temperature and humidity levels for the IT equipment and preventing overheating, which can cause failures, downtime, and reduced lifespan.

Inadequate cooling can result from insufficient capacity, poor airflow management, faulty components, or environmental conditions. Inadequate cooling can reduce the availability and reliability of the data centre by increasing the risk of thermal stress, hot spots, performance degradation, and equipment damage. Therefore, cooling is a critical factor that can affect availability and reliability in a data centre.
