

Das neueste ACD201, nützliche und praktische ACD201 pass4sure Trainingsmaterial

Fast2test ist eine gute Website, die effiziente Ausbildung zur Appian ACD201 Zertifizierungsprüfung bietet. Und Fast2test verspricht, dass Sie die Appian ACD201 Zertifizierungsprüfung bestehen können. Sonst geben wir Ihnen eine volle Rückerstattung. Vom Kauf unserer Produkte können Sie im Internet teilweise die Demo zur Appian ACD201 Zertifizierungsprüfung von Fast2test kostenlos herunterladen. Dann werden Sie mehr Vertrauen in unsere Produkte setzen. Sie können sich dann gut auf Ihre Appian ACD201 Zertifizierungsprüfung vorbereiten.

Appian ACD201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Thema 2	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

Thema 3	• Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Thema 4	• Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

ACD201 Schulungsunterlagen - ACD201 Schulungsangebot

Wenn Sie unsere Softwaren benutzen, können Sie wissen, dass die Appian ACD201 zu bestehen nicht so schwer ist. Sie können in die Unterlagen, die unsere Fast2test bietet, die Geschicklichkeit des Bestehens der Appian ACD201 Prüfung finden. Um Sie beruhigt kaufen zu lassen, bieten wir Ihnen kostenlose demo der Appian ACD201 für dich. Sie können nach des Downloads mal probieren.

Appian Senior Developer ACD201 Prüfungsfragen mit Lösungen (Q97-Q102):

97. Frage

You're creating a synced record type which will store read-only data from an external web service. Data in the external system is updated nightly, and the latest information must be available to users in the morning.

Currently there are approximately 150,000 entries in the external system, and this number is not expected to change significantly. There is an existing integration object and associated expression rule, which when called returns the complete dataset from the external system.

What are two configurations that you must apply to ensure that the latest and complete record set is available?

(Choose two.)

- A. Within the record type, schedule a full sync to occur nightly after the data is refreshed in the external system.
- B. Within the Source Filters settings on the record type, disable the row limit option so that all entries can be retrieved from the external system.
- C. Modify the integration object and associated expression rule to return batches of 1000 based on a batch number passed in from the record type.
- D. Set all record fields to evaluate in real-time so that the latest information is always retrieved from the web service.

Antwort: A,B

Begründung:

Scheduling a nightly full sync ensures the record type is updated with the latest data after the external system refreshes.

Disabling the row limit in Source Filters allows the complete dataset to be retrieved and synced, ensuring all entries are available.

98. Frage

You're creating an interface object that displays a report of open cases. This interface will be used as the content of a site page.

Users in the "ACME Employees" group must be able to view the report.

Which two steps should you perform? (Choose two.)

- A. Ensure that the site page visibility permits the "ACME Employees" group to view the page.
- B. Include the "ACME Employees" group as a member of the "Report Viewers" system group.
- C. Add the "ACME Employees" group as a viewer on the folder containing the interface object.
- D. Add the "ACME Employees" group as a viewer on the site object.

Antwort: A,C

Begründung:

The site page visibility must permit the "ACME Employees" group to ensure they can access the site page with the report.
The "ACME Employees" group must be added as a viewer on the folder containing the interface object to grant them access to the report interface.

99. Frage

You need to configure the security for the synced record type Case.

Your requirements are:

Only users in the "Archive Management" group can access cases in the "Archived" status.

Cases in the status "Deleted" are accessible to no one.

Users in the "All Users" group can already access the record.

What should you do?

- A. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived."
"Configure the record-level security to exclude all cases that are in the "Deleted" status
- B. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived."
"Configure a source filter to exclude all cases that are in the "Deleted" status.
- C. Create a new record-level security rule to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure a source filter to exclude all cases that are in the "Deleted" status.

Antwort: C

Begründung:

Creating a record-level security rule for "Archived" cases restricts access based on user group, and a source filter ensures "Deleted" cases are excluded from being accessed by any user. This approach meets both security requirements efficiently.

100. Frage

You need to select a plug-in to meet a specific requirement and several plug-ins can do the job.

What are three key factors to consider? (Choose three.)

- A. What are the compatible Appian versions?
- B. Is the plug-in approved for use in the Cloud?
- C. Who is the creator of the plug-in?
- D. What are the limitations of the plug-in?
- E. Is the plug-in open source or proprietary?
- F. What is the size of the plug-in?

Antwort: A,B,D

Begründung:

Limitations of the plug-in help you understand constraints or potential issues that could impact your implementation.

Compatible Appian versions ensure the plug-in will work correctly in your current and future environments.

Cloud approval status is essential for Appian Cloud environments, as only approved plug-ins are permitted for deployment.

101. Frage

You need to implement a requirement where a third-party system starts a process in Appian. The third-party system can invoke a service only through Web Services Description Language (WSDL).

What should you do to start the process in Appian?

- A. Create a default WSDL URL using process model UUID.
- B. Create a custom plug-in.
- C. Expose process model as a web service.

Antwort: C

Begründung:

To allow a third-party system to start a process in Appian using WSDL, you should expose the process model as a web service. This generates a WSDL endpoint that the external system can invoke.
