NEW QUESTION # 34

The Big Data Vision Workshop process is ideal for organizations who:

- A. Have a desire to leverage the Big Data Vision Workshop to identify where and how to leverage data and analytics to power their business models
- B. Have a desire to leverage Big Data to transform their business but do not know where and how to start
- C. Both A and B
- D. Have a wealth of data that they do not know how to monetize
- **E. All of the above**

Answer: E

Explanation:

The Big Data Vision Workshop is an early-phase framework designed to help organizations shape their data-driven transformation journey. It is particularly beneficial when:

Option A: Organizations want to leverage big data but lack clarity on where to start.

Option B: Organizations already have large volumes of data but struggle to derive monetization strategies from it.

Option C: Organizations want to identify use cases where data and analytics can enhance or even redefine their business models.

Since all three statements apply, the correct answer is Option E (All of the above).

NEW QUESTION # 35

The aim of developing Scribe was to offer reliability with using:

- A. High disk space usage
- **B. None of the above**
- C. Complex protocols
- D. Extensive protocols

Answer: B

Explanation:

Scribe is a server developed by Facebook for aggregating log data streamed in real time from many servers.

Its primary aim was reliability and simplicity in collecting logs at scale.

Unlike other systems, Scribe was designed to avoid complex or extensive protocols and to ensure lightweight log transfer.

It also avoids unnecessary high disk usage, relying instead on efficient pipelines.

Thus, the correct answer is Option D (None of the above).

ElementTree sub-library gives us direct access to:

- A. Insert tree of the XML
- **B. Parse tree of the XML**
- C. Delete tree of the XML
- D. None of the above
- E. Copy tree of the XML

Answer: B

Explanation:

In Python, the ElementTree module (part of the standard library xml.etree.ElementTree) provides a simple and efficient API for parsing and creating XML data.

The main feature of ElementTree is its ability to provide direct access to the parse tree of an XML document.

This allows developers to:

Parse XML into an in-memory tree structure.

Traverse, search, modify, and extract information from XML elements.

Write back changes into XML files.

Options B, C, and D (Delete, Copy, Insert tree) are not standard terminology in XML handling with ElementTree. While you can delete, insert, or copy elements, the module itself primarily gives parse tree access.

Thus, the correct answer is Option A (Parse tree of the XML).
