

# Data-Architect Latest Dumps Book - Data-Architect Latest Exam Pass4sure

Download the latest Salesforce Data Architect exam dumps to ensure your success.

1.Universal Containers (UC) has a very large and complex Salesforce org with hundreds of validation rules and triggers. The triggers are responsible for system updates and data manipulation as records are created or updated by users. A majority of the automation tool within UC org were not designed to run during a data load. UC is importing 100,000 records into Salesforce across several objects over the weekend.

What should a data architect do to mitigate any unwanted results during the import?

- A. Ensure validation rules, triggers and other automation tools are disabled.
- B. Ensure duplication and matching rules are defined.
- C. Import the data in smaller batches over a 24-hour period.
- D. Bulkify the trigger to handle import leads.

Answer: A

2.UC is migrating data from legacy system to SF.

UC would like to preserve the following information on records being migrated:

- Date time stamp for created date and last modified date.
- Ownership of records belonging to inactive users being migrated to Salesforce.

Which 2 solutions should a data architect recommends to preserve the date timestamps and ownership on records? Choose 2 answers:

- A. Log a case with SF to update these fields
- B. Enable update records with Inactive Owners Permission
- C. Enable Set Audit fields upon Record Creation Permission
- D. Enable modify all and view all permission.

Answer: B,C

3.A company wants to document the data architecture of a Salesforce organization.

What are two valid metadata types that should be included? (Choose two.)

- A. RecordType
- B. Document
- C. CustomField
- D. SecuritySettings

Answer: A,C

4.Universal Containers (UC) has implemented Sales Cloud for its entire sales organization, UC has built a custom object called projects\_c that stores customers project detail and employee billable hours.

The following requirements are needed:

A subset of individuals from the finance team will need to access to the projects object for reporting and adjusting employee utilization.

The finance users will not access to any sales objects, but they will need to interact with the custom object.

Which license type a data architect recommend for the finance team that best meets the requirements?

- A. Service Cloud
- B. Sales Cloud
- C. Light Platform Start
- D. Lighting platform plus

**Data-Architect Latest Exam Pass4sure & Latest Data-Architect Braindumps Pdf**

As the old saying goes people change with the times. People must constantly update their stocks of knowledge and improve their practical ability. Passing the test Data-Architect certification can help you achieve that and buying our Data-Architect test practice dump can help you pass the test smoothly. Our Data-Architect study question is superior to other same kinds of study materials in many aspects. Our products' test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. Each question and answer has been verified by the industry experts. The research and production of our Data-Architect Exam Questions are undertaken by our first-tier expert team.

Salesforce Data-Architect Certification Exam is intended for professionals who have experience in designing and implementing data architecture solutions, including data modeling, data management, and data integration. Data-Architect exam measures the candidate's knowledge and skills in data governance, data quality, data security, and data architecture patterns. Salesforce Certified Data Architect certification exam is a proctored, multiple-choice exam that consists of 60 questions, which must be completed within 120 minutes.

## Salesforce Certified Data Architect Sample Questions (Q85-Q90):

### NEW QUESTION # 85

UC is implementing sales cloud for patient management and would like to encrypt sensitive patient records being stored in files. Which solution should a data architect recommend to solve this requirement?

- A. Store files outside of salesforce and access them to real time.
- B. Implement 3rd party App Exchange app to encrypt files.
- C. **Implement shield platform encryption to encrypt files.**
- D. Use classic encryption to encrypt files.

**Answer: C**

Explanation:

Shield platform encryption is the recommended solution for encrypting sensitive patient records stored in files, as it provides encryption at rest for files and attachments, as well as standard and custom fields. Classic encryption only supports text fields with a maximum length of 175 characters, and does not encrypt files.

Third-party App Exchange apps may not provide the same level of security and compliance as shield platform encryption. Storing files outside of salesforce may introduce additional complexity and latency

### NEW QUESTION # 86

Universal Containers would like to remove data silos and connect their legacy CRM together with their ERP and with Salesforce. Most of their sales team has already migrated to Salesforce for daily use, although a few users are still on the old CRM until some functionality they require is completed. Which two techniques should be used for smooth interoperability now and in the future.

- A. Replicate ongoing changes in the legacy CRM to Salesforce to facilitate a smooth transition when the legacy CRM is eventually retired.
- B. Do not connect Salesforce and the legacy CRM to each other during this transition period, but do allow both to interact with the ERP.
- C. **Specify the legacy CRM as the system of record during transition until it is removed from operation and fully replaced by Salesforce.**
- D. Work with stakeholders to establish a Master Data Management plan for the system of record for specific objects, records, and fields.

**Answer: C,D**

### NEW QUESTION # 87

Universal Containers keeps its Account data in Salesforce and its Invoice data in a third -party ERP system. They have connected the Invoice data through a Salesforce external object. They want data from both Accounts and Invoices visible in one report in one place. What two approaches should an architect suggest for achieving this solution? Choose 2 answers

- A. Create a report combining data from the Account standard object and the Invoices external object.
- B. **Create a Visualforce page combining Salesforce Account data and Invoice external object data.**
- C. **Create a report in an external system combining Salesforce Account data and Invoice data from the ERP.**
- D. Create a separate Salesforce report for Accounts and Invoices and combine them in a dashboard.

**Answer: B,C**

Explanation:

Creating a report in an external system combining Salesforce Account data and Invoice data from the ERP, and creating a Visualforce page combining Salesforce Account data and Invoice external object data are two approaches that an architect can suggest for achieving this solution. Both of these approaches can display data from both Accounts and Invoices in one place, using either an external reporting tool or a custom web page. Creating a report combining data from the Account standard object and the Invoices external object is not possible because Salesforce does not support reporting on external objects. Creating a separate Salesforce report for Accounts and Invoices and combining them in a dashboard is not ideal because it will not show the data in one report, but rather in two separate components.

**NEW QUESTION # 88**

Get Cloudy Consulting monitors 15,000 servers, and these servers automatically record their status every 10 minutes. Because of company policy, these status reports must be maintained for 5 years. Managers at Get Cloudy Consulting need access to up to one week's worth of these status reports with all of their details.

An Architect is recommending what data should be integrated into Salesforce and for how long it should be stored in Salesforce. Which two limits should the Architect be aware of? (Choose two.)

- A. API Request limits
- B. Data storage limits
- C. Workflow rule limits
- D. Webservice callout limits

**Answer: A,B****NEW QUESTION # 89**

Universal Containers (UC) has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project. What should the architect consider, knowing there will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.com?

- A. Load all data after deferring sharing calculations.
- B. Use triggers to calculate summary values instead of Roll-Up.
- C. Load all data using external IDs to link to parent records.
- D. Use workflow to calculate summary values instead of Roll-Up.

**Answer: A****NEW QUESTION # 90**
