2025 Pass-Sure Databricks-Certified-Data-Analyst-Associate Exam Cram Questions Help You Pass Databricks-Certified-Data-Analyst-Associate Easily

In order to meet the different demands of the different customers, these experts from our company have designed three different versions of the Databricks-Certified-Data-Analyst-Associate study materials. All customers have the right to choose the most suitable version according to their need after buying our study materials. The PDF version of the Databricks-Certified-Data-Analyst-Associate Study Materials has many special functions, including download the demo for free, support the printable format and so on.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q54-

Q59):

NEW QUESTION # 54

A data analyst has created a user-defined function using the following line of code:

```
CREATE FUNCTION price(spend DOUBLE, units DOUBLE)
```

```
RETURNS DOUBLE
```

```
RETURN spend / units;
```

Which of the following code blocks can be used to apply this function to the `customer_spend` and `customer_units` columns of the table `customer_summary` to create column `customer_price`?

- A. `SELECT PRICE customer_spend, customer_units AS customer_price FROM customer_summary`
- B. `SELECT function(price(customer_spend, customer_units)) AS customer_price FROM customer_summary`
- C. `SELECT price(customer_spend, customer_units) AS customer_price FROM customer_summary`
- D. `SELECT double(price(customer_spend, customer_units)) AS customer_price FROM customer_summary`
- E. `SELECT price FROM customer_summary`

Answer: C

Explanation:

A user-defined function (UDF) is a function defined by a user, allowing custom logic to be reused in the user environment¹. To apply a UDF to a table, the syntax is `SELECT udf_name(column_name) AS alias FROM table_name`². Therefore, option E is the correct way to use the UDF `price` to create a new column `customer_price` based on the existing columns `customer_spend` and `customer_units` from the table `customer_summary`. V

NEW QUESTION # 55

A data analyst has a managed table `table_name` in database `database_name`. They would now like to remove the table from the database and all of the data files associated with the table. The rest of the tables in the database must continue to exist.

Which of the following commands can the analyst use to complete the task without producing an error?

- A. `DROP DATABASE database_name;`
- B. `DELETE TABLE table_name FROM database_name;`
- C. `DROP TABLE table_name FROM database_name;`
- D. `DELETE TABLE database_name.table_name;`
- E. `DROP TABLE database_name.table_name;`

Answer: E

Explanation:

The `DROP TABLE` command removes a table from the metastore and deletes the associated data files. The syntax for this command is `DROP TABLE [IF EXISTS] [database_name.]table_name;`. The optional `IF EXISTS` clause prevents an error if the table does not exist. The optional `database_name.` prefix specifies the database where the table resides. If not specified, the current database is used. Therefore, the correct command to remove the table `table_name` from the database `database_name` and all of the data files associated with it is `DROP TABLE database_name.table_name;`. The other commands are either invalid syntax or would produce undesired results. Reference: Databricks - `DROP TABLE`

NEW QUESTION # 56

A data analyst has a managed table `table_name` in database `database_name`. They would now like to remove the table from the database and all of the data files associated with the table. The rest of the tables in the database must continue to exist.

Which of the following commands can the analyst use to complete the task without producing an error?

- A. `DROP DATABASE database_name;`
- B. `DELETE TABLE table_name FROM database_name;`
- C. `DROP TABLE table_name FROM database_name;`
- D. `DELETE TABLE database_name.table_name;`
- E. `DROP TABLE database_name.table_name;`

Answer: E

NEW QUESTION # 57

Which of the following is an advantage of using a Delta Lake-based data lakehouse over common data lake solutions?

- A. Flexible schemas
- **B. ACID transactions**
- C. Data deletion
- D. Scalable storage
- E. Open-source formats

Answer: B

Explanation:

A Delta Lake-based data lakehouse is a data platform architecture that combines the scalability and flexibility of a data lake with the reliability and performance of a data warehouse. One of the key advantages of using a Delta Lake-based data lakehouse over common data lake solutions is that it supports ACID transactions, which ensure data integrity and consistency. ACID transactions enable concurrent reads and writes, schema enforcement and evolution, data versioning and rollback, and data quality checks. These features are not available in traditional data lakes, which rely on file-based storage systems that do not support transactions.

NEW QUESTION # 58

Which of the following benefits of using Databricks SQL is provided by Data Explorer?

- **A. It can be used to view metadata and data, as well as view/change permissions.**
- B. It can be used to produce dashboards that allow data exploration.
- C. It can be used to run UPDATE queries to update any tables in a database.
- D. It can be used to connect to third party BI tools.
- E. It can be used to make visualizations that can be shared with stakeholders.

Answer: A

Explanation:

Data Explorer is a user interface that allows you to discover and manage data, schemas, tables, models, and permissions in Databricks SQL. You can use Data Explorer to view schema details, preview sample data, and see table and model details and properties. Administrators can view and change owners, and admins and data object owners can grant and revoke permissions.

Reference: Discover and manage data using Data Explorer

NEW QUESTION # 59

.....

The operation of our Databricks-Certified-Data-Analyst-Associate exam torrent is very flexible and smooth. Once you enter the interface and begin your practice on our windows software. You will easily find there are many useful small buttons to assist your learning. The correct answer of the Databricks-Certified-Data-Analyst-Associate exam torrent is below every question, which helps you check your answers. We have checked all our answers. You just need to wait a few seconds before knowing your scores. The scores are calculated by every question of the Databricks-Certified-Data-Analyst-Associate Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.
