

Databricks-Certified-Data-Engineer-Associate Study Center & Databricks-Certified-Data-Engineer-Associate Key Concepts

P.S. Free 2025 Databricks Databricks-Certified-Data-Engineer-Associate dumps are available on Google Drive shared by itPass4sure: <https://drive.google.com/open?id=1G3HdDRzgZYDjW8GUpTbUMKJMyFbOEnmz>

With passing rate more than 98 percent from exam candidates who chose our Databricks Databricks-Certified-Data-Engineer-Associate Study Guide, we have full confidence that your Databricks-Certified-Data-Engineer-Associate actual test will be a piece of cake by them. Our Databricks Certified Data Engineer Associate Exam exam questions provide with the software which has a variety of self-study and self-assessment functions to detect learning results.

Databricks-Certified-Data-Engineer-Associate certification is a valuable credential for data engineers who want to advance their careers in the field of data processing and analytics. Databricks Certified Data Engineer Associate Exam certification demonstrates to employers that the holder has the skills and knowledge necessary to work with Databricks and can be trusted to manage and process large amounts of data in a variety of contexts. With the demand for skilled data engineers on the rise, obtaining the Databricks-Certified-Data-Engineer-Associate Certification can help individuals differentiate themselves in a competitive job market.

100% Pass Quiz 2025 Marvelous Databricks-Certified-Data-Engineer-Associate: Databricks Certified Data Engineer Associate Exam Study Center

To pass the Databricks Databricks-Certified-Data-Engineer-Associate exam on the first try, candidates need Databricks Certified Data Engineer Associate Exam updated practice material. Preparing with real Databricks-Certified-Data-Engineer-Associate exam questions is one of the finest strategies for cracking the exam in one go. Students who study with Databricks Databricks-Certified-Data-Engineer-Associate Real Questions are more prepared for the exam, increasing their chances of succeeding.

Databricks Certified Data Engineer Associate certification exam is a rigorous assessment of a candidate's knowledge and skills in various areas of data engineering. Databricks-Certified-Data-Engineer-Associate exam covers topics such as data ingestion, data transformation, data storage, data processing, and data analysis. Candidates must demonstrate proficiency in working with various Databricks tools, including Delta Lake, Spark SQL, and Apache Spark.

The GAQM Databricks-Certified-Data-Engineer-Associate exam is designed to validate the skills and knowledge of individuals working with the Databricks platform. Databricks Certified Data Engineer Associate Exam certification is a valuable asset for data engineers looking to advance their careers and demonstrate their expertise in the field of big data and analytics. Databricks-Certified-Data-Engineer-Associate Exam Tests candidates on a range of skills, including data modeling, data ingestion, data processing, and data analysis.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114

Which of the following is hosted completely in the control plane of the classic Databricks architecture?

- A. JDBC data source
- B. Worker node
- C. Databricks Filesystem
- **D. Databricks web application**
- E. Driver node

Answer: D

Explanation:

The Databricks web application is the user interface that allows you to create and manage workspaces, clusters, notebooks, jobs, and other resources. It is hosted completely in the control plane of the classic Databricks architecture, which includes the backend services that Databricks manages in your Databricks account. The other options are part of the compute plane, which is where your data is processed by compute resources such as clusters. The compute plane is in your own cloud account and network.

NEW QUESTION # 115

Which of the following commands will return the number of null values in the member_id column?

- **A. SELECT count_if(member_id IS NULL) FROM my_table;**
- B. SELECT null(member_id) FROM my_table;
- C. SELECT count_null(member_id) FROM my_table;
- D. SELECT count(member_id) - count_null(member_id) FROM my_table;
- E. SELECT count(member_id) FROM my_table;

Answer: A

Explanation:

To return the number of null values in the member_id column, the best option is to use the count_if function, which counts the number of rows that satisfy a given condition. In this case, the condition is that the member_id column is null. The other options are either incorrect or not supported by Spark SQL. Option A will return the number of non-null values in the member_id column. Option B will not work because there is no count_null function in Spark SQL. Option D will not work because there is no null function in Spark SQL. Option E will not work because there is no count_null function in Spark SQL. Reference:

Built-in Functions - Spark SQL, Built-in Functions

count_if - Spark SQL, Built-in Functions

NEW QUESTION # 116

A data engineering team has two tables. The first table march_transactions is a collection of all retail transactions in the month of March. The second table april_transactions is a collection of all retail transactions in the month of April. There are no duplicate records between the tables.

Which of the following commands should be run to create a new table all_transactions that contains all records from march_transactions and april_transactions without duplicate records?

- A. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
INTERSECT SELECT * FROM april_transactions;
- B. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
MERGE SELECT * FROM april_transactions;
- C. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
OUTER JOIN SELECT * FROM april_transactions;
- D. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions
INNER JOIN SELECT * FROM april_transactions;
- **E. CREATE TABLE all_transactions AS
SELECT * FROM march_transactions**

UNION SELECT * FROM april_transactions;

Answer: E

NEW QUESTION # 117

A data engineer wants to create a new table containing the names of customers that live in France. They have written the following command:

```
CREATE TABLE customersInFrance
____ AS
SELECT id,
       firstName,
       lastName,
FROM customerLocations
WHERE country = 'FRANCE';
```

A senior data engineer mentions that it is organization policy to include a table property indicating that the new table includes personally identifiable information (PII).

Which of the following lines of code fills in the above blank to successfully complete the task?

- A. PII
- **B. TBLPROPERTIES PII**
- C. There is no way to indicate whether a table contains PII.
- D. "COMMENT PII"
- E. COMMENT "Contains PII"

Answer: B

NEW QUESTION # 118

In which of the following file formats is data from Delta Lake tables primarily stored?

- A. CSV
- B. Delta
- C. A proprietary, optimized format specific to Databricks
- D. JSON
- **E. Parquet**

Answer: E

Explanation:

Delta Lake is an open source project that provides ACID transactions, time travel, and other features on top of Apache Parquet, a columnar file format that is widely used for big data analytics. Delta Lake uses versioned Parquet files to store your data in your cloud storage, along with JSON files as transaction logs and checkpoint files to track the changes and ensure data integrity. Delta Lake is compatible with any Apache Hive compatible file format, such as CSV, JSON, or AVRO, but it primarily stores data as Parquet files for better performance and compression.
