Real AZ-800 Exams | AZ-800 Updated Demo

It is our unshakable faith and our AZ-800 practice materials will offer tremendous help. The quality and value of the AZ-800 guide prep are definitely 100 percent trust-able. We guarantee that you can pass the exam at one time even within one week based on AZ-800 Exam Braindumps regularly 98 to 100 percent of former exam candidates have achieved their success by them. We provide tracking services to all customers who purchase our AZ-800 learning questions 24/7.

Microsoft Administering Windows Server Hybrid Core Infrastructure Exam Certification Details:

Books / Training	Course AZ-800T00: Administering Windows Server Hybrid Core Infrastructure
Schedule Exam	Pearson VUE
Passing Score	700 / 1000
Number of Questions	40-60
Duration	120 mins
Sample Questions	Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions
Exam Code	AZ-800

One of the key benefits of earning the Microsoft AZ-800 Certification is that it demonstrates your expertise in hybrid infrastructure management. Administering Windows Server Hybrid Core Infrastructure certification is recognized by employers around the world, and it can lead to new career opportunities and higher salaries. Additionally, the skills and knowledge you gain while preparing for the exam can help you become a more valuable asset to your current employer, as you will be able to contribute more effectively to

hybrid cloud projects.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q87-Q92):

NEW QUESTION # 87

Your network contains a multi-site Active Directory Domain Services (AD DS) forest. Each Active Directory site is connected by using manually configured site links and automatically generated connections.

You need to minimize the latency for changes to Active Directory.

What should you do?

- A. For each site link, modify the options attribute.
- B. For each site link, modify the replication schedule.
- C. For each site link, modify the site link costs.
- D. Create a site link bridge that contains all the site links.

Answer: A

Explanation:

When you configure manual site link replication schedule is already setup to 15 minute replication cycle you can not lower more down. So only option left is to change link site option attribute for use notify setting.

NEW QUESTION # 88

You have a server named Server1 that runs Windows Server and contains three volumes named C, D, and E.

Files are stored on Server1 as shown in the following table.

Name	On volume	Size
File1	C	500 KB
File2	D	10 KB
File3	D	1 MB

For volume D, Data Deduplication is enabled and set to General purpose file server.

You perform the following actions:

- * Move File1 to volume D.
- * Copy File2 to volume D and name the copy File4.
- * Move File3 to volume E

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area	Statements	Yes	No
	File1 is deduplicated after the deduplication job runs.	☐	☐
	File3 is deduplicated after the deduplication job runs.	☐	☐
	File4 is deduplicated after the deduplication job runs.	☐	☐

Answer:

Explanation:

Explanation:

Answer Area	Statements	Yes	No
	File1 is deduplicated after the deduplication job runs.	☒	☐
	File3 is deduplicated after the deduplication job runs.	☐	☒
	File4 is deduplicated after the deduplication job runs.	☒	☐

NEW QUESTION # 89

You have a server named Server1 that runs Windows Server. The disks on Server1 are configured as shown in the following exhibit.

You need to convert volume E to ReFS. The solution must meet the following requirements:

- * Preserve the existing data on volume E.
- * Minimize administrative effort.

What should you do first?

- A. Convert Disk 2 to a dynamic disk.
- **B. Back up the data on volume E.**
- C. Take Disk 2 offline.
- D. Runconvert.exe.

Answer: B

NEW QUESTION # 90

You have an Azure subscription that contains the storage accounts shown in the following table.

Name	Location	Kind	Container	File share
storage1	East US	StorageV2	cont1	share1
storage2	East US	BlockBlobStorage	cont2	<i>Not applicable</i>
storage3	East US	FileStorage	<i>Not applicable</i>	share3
storage4	Central US	StorageV2	cont4	share4

In the East US Azure region, you create a storage sync service named Synd.

You need to create a sync group in Synd.

Which storage accounts can you use, and what can you specify as the cloud endpoints? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

The Administering Windows Server Hybrid Core Infrastructure materials for Azure File Sync explain that a cloud endpoint in a sync group must be an Azure file share and that "the storage account that contains the Azure file share must be in the same Azure region as the Storage Sync Service." The guide also clarifies supported account types: "Azure File Sync supports Azure Files in general-purpose v2 (StorageV2) accounts for Standard performance and FileStorage accounts for Premium performance; BlockBlobStorage accounts are not supported for Azure Files." Additionally, only storage accounts that contain Azure file shares can be selected for cloud endpoints; blob containers (used by Block Blob) are not applicable to Azure File Sync.

Applying these requirements to the table:

* storage1 (East US, StorageV2) # valid region and account kind, and it has share1 (an Azure file share) # eligible.

* storage3 (East US, FileStorage) # valid region and supported Premium account kind, with share3 # eligible.

* storage2 (East US, BlockBlobStorage) # Block Blob only, no Azure Files share # ineligible.

* storage4 (Central US, StorageV2) # has a file share but is not in the same region as the Storage Sync Service (Synd in East US) # ineligible.

Therefore, when creating the sync group in Synd (East US), you can use storage1 and storage3, and the only valid cloud endpoints you can specify are share1 and share3.

NEW QUESTION # 91

Your network contains a two-domain on-premises Active Directory Domain Services (AD DS) forest named Contoso.com. The forest contains the domain controllers shown in the following table.

You create an Active Directory site named Site3. Site1, Site2 and Site3 each has a dedicated site link to the Hub site.

In Site3, you install a new server named Server1.

You need to promote Server1 to an ROOC in child.contoso.com by using the install from Media (IFM) option. The solution must minimize network traffic.

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
