New AZ-120 Test Questions & AZ-120 Certification Materials

It can be difficult to prepare for the Microsoft AZ-120 exam successfully, but with actual and updated Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) exam questions, it can be much simpler. The difference between successful and failed AZ-120 Certification Exam attempts can be determined by studying with real AZ-120 exam questions.

Microsoft AZ-120 Certification Exam is ideal for professionals who are responsible for managing SAP applications and want to leverage the scalability, reliability, and security of Azure. Planning and Administering Microsoft Azure for SAP Workloads certification validates the skills and knowledge necessary to deploy and manage SAP solutions on Azure, including the ability to design an Azure infrastructure for SAP workloads, deploy SAP solutions on Azure, and monitor and maintain SAP solutions on Azure. Planning and Administering Microsoft Azure for SAP Workloads certification is designed to help professionals advance their careers by demonstrating their expertise in Azure and SAP solutions.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q126-Q131):

NEW QUESTION # 126

You have an Azure subscription.

You plan to deploy an SAP landscape by using Azure Center for SAP solutions.

You need to use custom virtual machine images for the deployment.

To what should you set Security type for the virtual machines, and where should you store the custom images? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

Answer Area

Answer:

Explanation:

Answer Area

NEW QUESTION # 127

You plan to migrate an SAP environment to Azure.

You need to create a design to facilitate end-user access to SAP applications over the Internet, while restricting user access to the virtual machines of the SAP application servers.

What should you include in the design?

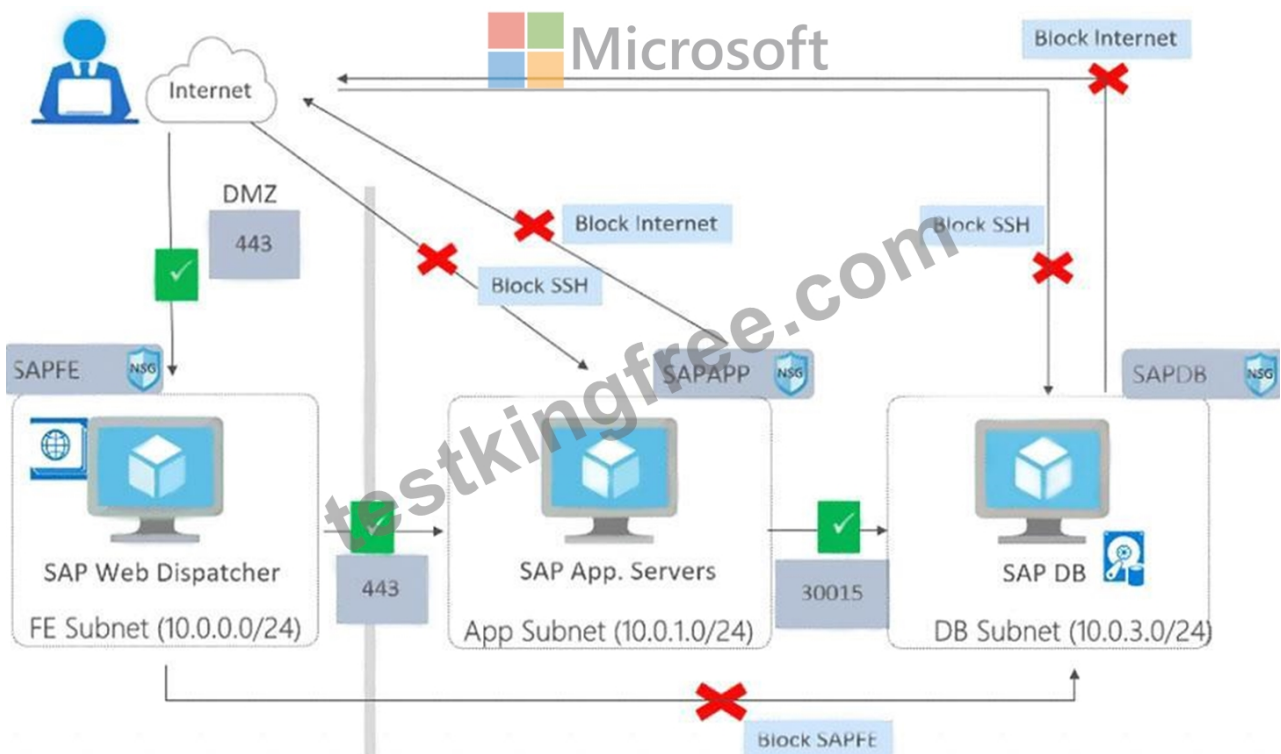

- A. Use an SAP Web Dispatcher to route all incoming connections
- B. Configure point-to-site VPN connections for each user
- C. Configure a public IP address for each SAP application server
- D. Deploy an internal Azure Standard Load Balancer for incoming connections

Answer: A

Explanation:

Explanation

- * A public internet user can reach the SAP Web-Dispatcher over port 443
- * The SAP Web-Dispatcher can reach the SAP Application server over port 443
- * The App Subnet accepts traffic on port 443 from 10.0.0.0/24
- * The SAP Application server sends traffic on port 30015 to the SAP DB server
- * The DB subnet accepts traffic on port 30015 from 10.0.1.0/24.
- * Public Internet Access is blocked on both App Subnet and DB Subnet.

NEW QUESTION # 128

You plan to deploy a highly available ASCS instance to SUSE Linux Enterprise Server (SLES) virtual machines in Azure.

You are configuring an internal Azure Standard Load Balancer for the ASCS instance.

How should you configure the internal Standard Load Balancer? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the configuration options for an Azure Standard Load Balancer. The 'Session persistence' dropdown is set to 'Client IP'. The 'Floating IP (direct server return)' dropdown is set to 'Enabled'. The Microsoft logo is at the bottom.

Answer:

Explanation:

Session persistence:  Microsoft ▼

Client IP
Client IP and Protocol
None

Floating IP (direct server return): ▼

Disabled
Enabled

Explanation

Session persistence: None.

Floating IP: Enabled.

NEW QUESTION # 129

You have an SAP production landscape on-premises and an SAP development landscape on Azure.

You deploy a network virtual appliance to act as a firewall between the Azure subnet and the on-premises network.

Solution: You configure a user-defined route table.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION # 130

You have an on-premises SAP environment. Application servers run on SUSE Linux Enterprise Server (SLES) servers. Databases run on SLES servers that have Oracle installed.

You need to recommend a solution to migrate the environment to Azure. The solution must use currently deployed technologies whenever possible and support high availability.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Application server operating system:	▼
	Oracle Linux
	SLES
	Windows Server 2016
Database server operating system:	▼
	Oracle Linux
	SLES
	Windows Server 2016
Database platform:	▼
	Azure SQL Database
	Microsoft SQL Server
	Oracle
	SAP HANA

Answer:

Explanation:

Application server operating system: ▼

Database server operating system: ▼

Database platform: ▼

Microsoft

Explanation

Application server operating system: ▼

Database server operating system: ▼

Database platform: ▼
