## Passing AWS-Developer Score Feedback & Valid AWS-Developer Exam Papers

To keep you updated with latest changes in the AWS-Developer test questions, we offer one-year free updates in the form of new questions according to the requirement of AWS-Developer real exam. Updated AWS-Developer vce dumps ensure the accuracy of learning materials and guarantee success of in your first attempt. Why not let our AWS-Developer Dumps Torrent help you to pass your exam without spending huge amount of money.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q251-Q256):

### NEW QUESTION # 251

A Developer is storing sensitive documents in Amazon S3 that will require encryption at rest. The encryption keys must be rotated annually, at least.

What is the easiest way to achieve this?

- A. Import a custom key into AWS KMS with annual rotation enabled
- B. Encrypt the data before sending it to Amazon S3
- C. Use AWS KMS with automatic key rotation
- D. Export a key from AWS KMS to encrypt the data

**Answer: C**

Explanation:

Explanation

<https://docs.aws.amazon.com/kms/latest/developerguide/rotate-keys.html>

<https://docs.aws.amazon.com/kms/latest/developerguide/custom-key-store-overview.html> You can use the same techniques to view and manage the CMKs in your custom key store that you use for CMKs in the AWS KMS key store. You can control access with IAM and key policies, create tags and aliases, enable and disable the CMKs, and schedule key deletion. You can use the CMKs for cryptographic operations and use them with AWS services that integrate with AWS KMS. However, you cannot enable automatic key rotation and you cannot import key material into a CMK in a custom key store.

Q: Can I rotate my keys? Yes. You can choose to have AWS KMS automatically rotate CMKs every year, provided that those keys were generated within AWS KMS HSMs. Automatic key rotation is not supported for imported keys, asymmetric keys, or keys generated in an AWS CloudHSM cluster using the AWS KMS custom key store feature. If you choose to import keys to AWS KMS or asymmetric keys or use a custom key store, you can manually rotate them by creating a new CMK and mapping an existing key alias from the old CMK to the new CMK. <https://aws.amazon.com/kms/faqs/>

### NEW QUESTION # 252

A company is using Amazon API Gateway to manage access to a set of microservices implemented as AWS Lambda functions. Following a bug report, the company makes a minor breaking change to one of the APIs.

In order to avoid impacting existing clients when the new API is deployed, the company wants to allow clients six months to migrate from v1 to v2.

Which approach should the Developer use to handle this change?

- A. Use API Gateway to automatically propagate the change to clients, specifying 180 days in the phased deployment parameter.
- B. Update the underlying Lambda function, create an Amazon CloudFront distribution with the updated Lambda function as its origin.
- C. Update the underlying Lambda function and provide clients with the new Lambda invocation URL.
- **D. Use API Gateway to deploy a new stage named v2 to the API and provide users with its URL.**

**Answer: D**

### NEW QUESTION # 253

A Developer executed a AWS CLI command and received the error shown below:

What action should the Developer perform to make this error human-readable?

- A. Use the AWS IAM decode-authorization-message API to decode this message.
- B. Make a call to AWS KMS to decode the message.
- C. Use an open source decoding library to decode the message.
- **D. Use the AWS STS decode-authorization-message API to decode the message.**

**Answer: D**

Explanation:

Explanation

<https://docs.aws.amazon.com/cli/latest/reference/sts/decode-authorization-message.html> The message is encoded because the details of the authorization status can constitute privileged information that the user who requested the operation should not see. To decode an authorization status message, a user must be granted permissions via an IAM policy to request the DecodeAuthorizationMessage (sts:DecodeAuthorizationMessage ) action.

### NEW QUESTION # 254

A user is creating multiple IAM users. What advice should be given to him to enhance the security?

- A. Grant more privileges to the user, but least privileges to the group
- B. Grant all higher privileges to the group
- C. Grant less privileges for user, but higher privileges for the group
- **D. Grant least privileges to the individual user**

**Answer: D**

Explanation:

It is a recommended rule that the root user should grant the least privileges to the IAM user or the group. The higher the privileges, the more problems it can create.

<http://docs.aws.amazon.com/IAM/latest/UserGuide/IAMBestPractices.html>

#### NEW QUESTION # 255

A Developer must deploy a new AWS Lambda function using an AWS CloudFormation template.

Which procedures will deploy a Lambda function? (Choose two.)

- A. Upload the code to an AWS CodeCommit repository, then add a reference to it in an `AWS::Lambda::Functionresource` in the template.
- B. Create an `AWS::Lambda::Functionresource` in the template, then write the code directly inside the CloudFormation template.
- C. Upload a .ZIP file to AWS CloudFormation containing the function code, then add a reference to it in an `AWS::Lambda::Functionresource` in the template.
- D. Upload a .ZIP file containing the function code to Amazon S3, then add a reference to it in an `AWS::Lambda::Functionresource` in the template.
- E. Upload the function code to a private Git repository, then add a reference to it in an `AWS::Lambda::Functionresource` in the template.

**Answer: B,C**

#### NEW QUESTION # 256
