Firmly believe in an idea, the OGEA-101 exam questions are as long as the candidates to follow our steps, follow our curriculum requirements, they can be good to achieve their goals, to obtain the qualification OGEA-101 certificate of the target easily and soothly. For we have been in this career for years, we dare to say that no body can know the exam questions and answers better than our professionals. And our pass rate of our OGEA-101 Study Materials is high as 98% to 100%!

The Open Group OGEA-101 Exam Overview:

Certification Vendor:	The Open Group
Exam Name:	TOGAF Enterprise Architecture Part 1 Exam
Exam Number:	OGEA-101
Real Exam Qty:	40
Exam Duration:	60 minutes
Certificate Validity Period:	Lifetime
Related Certifications:	TOGAF Enterprise Architecture Practitioner TOGAF Enterprise Architecture Combined Part 1 and Part 2
Available Languages:	English, French, Simplified Chinese
Exam Format:	Multiple Choice, Closed Book
Passing Score:	60% (24/40)
Exam Price:	USD \$375
Recommended Training:	TOGAF Standard 10th Edition Official Materials Accredited Training Providers
Exam Registration:	Official Registration
Sample Questions:	The Open Group OGEA-101 Sample Questions
Exam Way:	Online proctored or onsite at Pearson VUE test centers
Pre Condition:	No mandatory prerequisites; recommended basic knowledge of enterprise architecture concepts
Official Syllabus URL:	https://certification.opengroup.org/togaf%C2%AE-enterprise-architecture-part-1-exam

New OGEA-101 Dumps Ppt, OGEA-101 Reliable Exam Voucher

With our motto "Sincerity and Quality", we will try our best to provide the big-league OGEA-101 exam questions for our valued

customers like you. Our company emphasizes the interaction with customers on our OGEA-101 Study Guide. We not only attach great importance to the quality of TOGAF Enterprise Architecture Part 1 Exam exam, but also take the construction of a better after-sale service on our OGEA-101 learning materials into account.

The Open Group OGEA-101 Exam Syllabus Topics:

Topic	Details
Topic 1	Architecture Content Framework: Candidates learn about the TOGAF content metamodel and architecture artifacts. This topic of the OGEA-101 exam measures their understanding of content organization and documentation.
Topic 2	Introduction to the Architecture Development Method (ADM): The ADM is central to TOGAF, outlining a structured approach to developing and managing enterprise architecture. This section assesses comprehension of TOGAF practitioners about the ADM phases and their application, ensuring they grasp the method's iterative nature, which is vital for the OGEA-101 exam.
Topic 3	Architecture Vision: Aspiring TOGAF practitioners learn to develop an architecture vision that aligns with business goals and drivers. This topic evaluates the skills in articulating a clear and compelling vision, a necessary competency for successfully navigating the OGEA-101 Exam and implementing enterprise architecture.
Topic 4	Fundamental Concepts of Enterprise Architecture: This topic covers the definition, purpose, and benefits of enterprise architecture, emphasizing its role in aligning business objectives with IT strategies. It measures the understanding of TOGAF practitioners about foundational principles essential for effective enterprise architecture practice, crucial for passing the OGEA-101 exam.
Topic 5	Architecture Change Management: Focusing on managing architecture changes, this topic of the TOGAF Enterprise Architecture Part 1 exam assesses skills of practitioners in handling change requests and maintaining architecture repositories.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

What are the following activities part of?

- * Initial risk assessment
- * Risk mitigation and residual risk assessment
- * Risk monitoring

- A. Phase A
- B. Security Architecture
- C. Phase C
- **D. Risk Management**

Answer: D

Explanation:

The following activities are part of Risk Management:

- * Initial risk assessment
- * Risk mitigation and residual risk assessment
- * Risk monitoring

Risk Management is the process of identifying, assessing, and responding to risks that may affect the achievement of the enterprise's objectives. Risk Management involves balancing positive and negative outcomes resulting from the realization of either opportunities or threats. Reference: The TOGA Standard | The Open Group Website, Section 3.3.3 Risk Management.

NEW QUESTION # 36

The diagram illustrates the TOGAF Architecture Change Management Framework (ACM Framework). It shows the following components and their interactions:

- Architecture Metamodel** (Green box at the top):
 - Artifacts in the landscape are structured according to the metamodel (arrow to Architecture Landscape).
- Architecture Landscape** (Large blue box in the center):
 - Enables the enterprise (arrow to Solutions Landscape).
 - Best practice creates reference architecture (arrow to Reference Library).
 - Adopted by the enterprise (arrow from Reference Library).
 - Standards are complied with (arrow to Standards Library).
 - Best practice creates standards (arrow to Standards Library).
 - The landscape is governed (arrow to the Architecture Board).
- Reference Library** (Blue box):
 - Reference models adopted by the enterprise (arrow from External Reference Models).
 - The Reference Library is governed (arrow from the Architecture Board).
- Standards Library** (Blue box):
 - Standards have reference implementations (arrow from Reference Library).
 - Standards adopted by the enterprise (arrow from External Standards).
 - Compliance is governed (arrow from the Architecture Board).
- Solutions Landscape** (Pink box on the left):
 - Business outcomes delivered (arrow to Architecture Requirements Repository).
- Architecture Requirements Repository** (Pink box on the left):
 - Drivers for the enterprise (arrow to the Architecture Board).
- Architecture Board** (Grey box at the bottom right):
 - Visibility and escalation (arrow from the Architecture Board).
 - Architecture Board steers and manages the capability (arrow to the Architecture Board).
- External Reference Models** (Grey box on the right):
 - Reference models adopted by the enterprise (arrow to Reference Library).
- External Standards** (Grey box on the right):
 - Standards adopted by the enterprise (arrow to Standards Library).
- Architecture Board** (Grey box at the bottom right):
 - Architecture Board steers and manages the capability (arrow to the Architecture Board).

Consider the illustration. What are the items labelled A, B, and C?

- A. A-Architecture Repository, B-Governance Repository, C-Architecture Capability
- B. A-Enterprise Repository, B-Board repository, C-Enterprise Capability
- C. A-Architecture Repository, B-Governing Board, C-Enterprise Capability
- D. A-Enterprise Repository, B-Governance Repository, C-Board Repository

Answer: C

Explanation:

A-Architecture Repository: This is a part of the Architecture Metamodel that contains artifacts structured according to the metamodel. It includes the Architecture Landscape which is adopted by the enterprise and governed by certain standards and practices.

B-Governing Board: The Governing Board ensures visibility and escalation, meaning it oversees and manages the capability of the architecture landscape. It plays a crucial role in governance.

C-Enterprise Capability: This refers to how well an enterprise can execute its mission, meet business objectives or satisfy its stakeholders' needs and expectations. It's influenced by both internal factors (like resources, processes) and external ones (like market trends).

TOGAF Version 9.1, Chapter 34: 1

NEW QUESTION # 37

Exhibit

Consider the illustration showing an architecture development cycle. Which description matches the phase of the ADM labeled as item 1?

- A. Operates the process of managing architecture requirements
- B. Conducts implementation planning for the architecture defined in previous phases
- C. Establishes procedures for managing change to the new architecture
- D. Provides architectural oversight for the implementation

Answer: A

Explanation:

The illustration shows an architecture development cycle based on the TOGAF ADM (Architecture Development Method), which is a method for developing and managing an enterprise architecture.

The ADM consists of nine phases, each with a specific purpose and output. The phases are:

Preliminary Phase: To prepare and initiate the architecture development cycle, including defining the architecture framework, principles, and governance.

Phase A: Architecture Vision: To define the scope, vision, and stakeholders of the architecture initiative, and to obtain approval to proceed.

Phase B: Business Architecture: To describe the baseline and target business architecture, and to identify the gaps between them.

Phase C: Information Systems Architectures: To describe the baseline and target data and application architectures, and to identify the gaps between them.

Phase D: Technology Architecture: To describe the baseline and target technology architecture, and to identify the gaps between

them.

Phase E: Opportunities and Solutions: To identify and evaluate the opportunities and solutions for implementing the target architecture, and to define the work packages and transition architectures.

Phase F: Migration Planning: To finalize the implementation and migration plan, and to ensure alignment with the enterprise portfolio and project management.

Phase G: Implementation Governance: To provide architecture oversight and guidance for the implementation projects, and to manage any architecture change requests.

Phase H: Architecture Change Management: To monitor the changes in the business and technology environment, and to assess the impact and performance of the architecture.

In addition to these phases, there is a central process called Requirements Management, which is labeled as item 1 in the illustration. This process operates throughout the ADM cycle, and its purpose is to manage the architecture requirements throughout the architecture development, ensuring that they are aligned with the business requirements and the stakeholder concerns².

Therefore, the description that matches the phase of the ADM labeled as item 1 is C. Operates the process of managing architecture requirements.

Reference:

1: The TOGAF Standard, Version 9.2, Chapter 5: Architecture Development Method (ADM)

2: The TOGAF Standard, Version 9.2, Chapter 17: Requirements Management

NEW QUESTION # 38

Which statement best describes iteration and the ADM?

- **A. The ADM is iterative, over the whole process between phases and within phases**
- B. The ADM is iterative within the first cycle and then between phases
- C. The level of detail is defined once and applies to all iterations
- D. The ADM is sequential Iteration is applied within phases

Answer: A

Explanation:

This statement best describes iteration and the ADM. The ADM is iterative over the whole process between phases and within phases because it allows for feedback loops and refinements at any point in the architecture development and transition process. Iteration enables architects to address changing requirements, assumptions, constraints, and environments; to validate and improve architectures; to manage risks and issues; and to ensure stakeholder satisfaction and value realization. Reference: The TOGAF Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

NEW QUESTION # 39

What is present in all phases within the ADM and should be identified, classified and mitigated before starting a transformation effort?

- A. Schedule constraints
- **B. Risk**
- C. Budgetary constraints
- D. Information gaps

Answer: B
