

Efficient XSOAR-Engineer Reliable Test Testking & Leader in Certification Exams Materials & Authorized XSOAR-Engineer Exam Flashcards

Actualtests4sure offers highly designed Palo Alto Networks XSOAR-Engineer exam questions and online XSOAR-Engineer practice test engine to help you successfully clear the Palo Alto Networks exam. Their study materials cover all the basic to advanced required XSOAR-Engineer Exam Questions material that you need to know to pass the XSOAR-Engineer Exam. These two simple, easy, and accessible learning formats will boost your confidence.

Palo Alto Networks XSOAR-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Threat Intelligence Management: This domain focuses on threat intelligence operations including indicator creation and configuration, indicator relationships, enrichment with source reliability, external intelligence sharing, and exclusion list management.
Topic 2	<ul style="list-style-type: none">Planning, Installation, and Maintenance: This domain covers system setup and administration including authentication configuration, engine deployment, dev prod environment planning, Marketplace pack management, integration instance configuration, and system maintenance.
Topic 3	<ul style="list-style-type: none">Incident Interactions and Reporting: This domain covers incident operations including states and actions, War Room activities, incident relationships, and dashboard and report configuration for metrics and visualization.
Topic 4	<ul style="list-style-type: none">Use Case Planning and Development: This domain focuses on designing security use cases through incident and indicator lifecycle management, field and layout customization, classifier and mapper configuration, incident creation methods, pre post-processing, and incident type configuration with playbooks, layouts, SLAs, and lists.
Topic 5	<ul style="list-style-type: none">Playbook Development: This domain addresses automation through playbook creation including task configuration, context data manipulation, various task types, sub-playbooks with looping, filters and transformers, debugger usage, built-ins and scripts, automation script creation, and job management.

Palo Alto Networks XSOAR-Engineer Exam Flashcards & Test XSOAR-Engineer Valid

We have made classification to those faced with various difficulties, aiming at which we adopt corresponding methods to deal with. According to the statistics shown in the feedback chart, the general pass rate for latest XSOAR-Engineer test prep is 98%, which is far beyond that of others in this field. In recent years, our XSOAR-Engineer Exam Guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the XSOAR-Engineer exam.

Palo Alto Networks XSOAR Engineer Sample Questions (Q79-Q84):

NEW QUESTION # 79

Which component can be part of a load balancing group?

- A. Load balancing server
- B. Distributed database
- **C. Engine**
- D. D2 agent

Answer: C

Explanation:

Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/5-5/cortex-xsoar-admin/engines/understand-demisto-engines.html>

NEW QUESTION # 80

What is the result of an indicator being marked as expired?.

- **A. It still exists and can be searched.**
- B. It is deleted from the database after seven days.
- C. It still exists but is not searchable.
- D. It is immediately deleted from the database.

Answer: A

Explanation:

According to the Cortex XSOAR Indicator Lifecycle documentation, when an indicator reaches its expiration date or is manually set to `Expired`, the platform does not delete it. Instead, the indicator remains fully stored within the Indicator Store and can still be searched, viewed, and referenced within the system. Expiration affects how the indicator behaves operationally, not whether it still exists in the database. Specifically, an expired indicator no longer participates in active enrichment, matching, or classification workflows. It will not trigger rules, correlation, or alerting functionality, and enrichment engines stop providing updates. The system retains expired indicators for historical accuracy, audit trail completeness, and investigation continuity. Deleting indicators automatically would compromise incident history and threat intelligence analytics, which XSOAR explicitly avoids. Furthermore, the documentation states that indicator deletion is always manual unless automated cleanup is configured, and even then, expiration alone does not initiate deletion.

Thus, the correct statement is option A: the indicator still exists and remains searchable, maintaining its presence in XSOAR's intelligence repository while no longer influencing automated processes. Options B, C, and D contradict documented indicator-retention behavior.

NEW QUESTION # 81

Inside the Incidents table view, which actions can be performed on the selected incidents? (Choose two.)

- A. Run Command for all selected incidents having Active status
- **B. Assign, Edit, and Mark as Duplicate for all selected incidents regardless of their status**
- **C. Run Command, Export, and Close and Delete for all selected incidents regardless of their status**
- D. Export incidents as JSON and change incident status

Answer: B,C

NEW QUESTION # 82

Where does the mapping of user groups to SAML groups take place?.

- A. Palo Alto Networks Hub.
- **B. Tenant.**
- C. Customer Support Portal.
- D. Cortex Gateway.

Answer: B

Explanation:

The SSO (SAML) configuration is performed inside each Cortex XSOAR tenant, under the Authentication settings. Group mapping (SAML group # XSOAR role/group) is managed at the tenant level, not in the Hub, Gateway, or Support Portal.

NEW QUESTION # 83

Which of the following is a feature of XSOAR automations?

- A. can run on multiple docker containers
- B. can be password protected
- C. can be written in C++
- **D. can be set to run on a scheduled basis in the automation settings**

Answer: D

Explanation:
