Salesforce Certified Experience Cloud Consultant Sample Questions (Q31-Q36):

NEW QUESTION # 31

Ursa Major Solar (UMS) has business and person accounts in its Salesforce org. UMS has partner portals created for its Silver partners, DreamHouse Realty (DR) and Cloud Kicks (CK).

UMS's Experience team is creating users for its partners. DR and CK users do not require access to opportunities, leads, and campaigns.

What are the two considerations for creating partner users and granting access?

Choose 2 answers

- A. Only business accounts can be created as partner users
- B. Only person accounts can be created as partner users.
- C. Assign Customer Community Plus license to partner users.
- D. Assign Partner Community license to partner users.

Answer: C,D

Explanation:

Two considerations for creating partner users and granting access are B and C. Partner users are external users who access your Experience Cloud site through a partner account. A partner account is an account that has the Is Partner checkbox enabled. To create partner users and grant access, you need to assign them a license type and a profile. Two license types that are suitable for partner users are Partner Community and Customer Community Plus. These license types allow partner users to access standard CRM objects, such as accounts, contacts, leads, opportunities, and cases, as well as custom objects and tabs. They also allow partner users to use roles and sharing rules to share records with other users.

NEW QUESTION # 32

By defining roles, permission sets, or profiles, Knowledge article visibility can be controlled by using which functionality?

- A. Org-Wide Defaults
- B. Content Management
- C. Automatic Topic Assignment
- D. Data Category Visibility

Answer: C

NEW QUESTION # 33

Universal Containers is looking to onboard three new partners to the community.

* Each partner have a branded experience containing their colors and logo.

* Gold and silver partners should have access to the Leads inbox component, but Bronze partners should not.

* Bronze partners should not have access to the Leads tab.

How should an administrator solve for these requirements?

- A. Create branding sets, audience targeting and a custom Navigation menu component.
- B. Create branding sets, audience targeting, and navigation menu targeting.
- C. Create branding sets, a separate page variation for each partner, and a custom Navigation Menu component.
- D. Create a separate community for each partner with audience targeting.

Answer: B

NEW QUESTION # 34

What are three valid topic types? Choose 3 answers

- A. Trending Topic
- B. Navigational Topic
- C. Content Topic
- D. Featured Topic
- E. Standard Topic

Answer: A,D,E

Explanation:

Three valid topic types are Featured Topic, Trending Topic, and Standard Topic. Topics are keywords or phrases that help users find and organize content in Experience Cloud sites. A Featured Topic is a topic that is manually selected by an administrator or moderator to be displayed prominently on the site. A Trending Topic is a topic that is automatically generated by an algorithm based on the popularity and recency of the content.

A Standard Topic is a topic that is created by users or administrators and can be assigned to any content.

NEW QUESTION # 35

Get Cloudy Consulting wants to leverage Metadata API for migrating changes between environments.

What are the three key features of Metadata API?

Metadata API might require manual migration for changes that involve unsupported settings and features.

- A. Metadata API is ideal when multiple work streams are involved.
- B. Metadata API can be used programmatically as well as declaratively.
- C. Metadata API is ideal for when the changes are complex.
- D. Metadata API supports migrating all Communicates settings and features.

Answer: A,B,C

Explanation:

Three key features of Metadata API are A, B, and C. Metadata API is an API that allows you to retrieve, deploy, create, update, or delete customization information in your Salesforce org, such as custom objects, fields, tabs, or pages. Metadata API is ideal when multiple work streams are involved, because it allows you to manage changes across different environments and teams. Metadata API can be used programmatically as well as declaratively, because it supports both code-based tools and point-and-click tools for working with metadata. Metadata API is ideal for when the changes are complex, because it allows you to handle fine-grained customizations and dependencies.

NEW QUESTION # 36

.....
