SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q13-Q18):

NEW QUESTION # 13

Through which applications can you launch the Cloud Integration Automation Service (CIAS)? Note: There are 2 correct answers to this question.

- A. SAP for Me
- B. SAP Business Accelerator Hub
- C. SAP Cloud ALM
- D. SAP Signavio Process Navigator

Answer: A,C

NEW QUESTION # 14

You have assigned a business role to an end user who has been granted access to only one specific application. While you have a day off, it turns out that the app doesn't show up on the user's launchpad. What can the user do?

- A. Assign a different business role that provides access.
- B. Use the search function to find the app.
- C. Assign a launchpad space to the business role.
- D. Create a page and assign it to the launchpad space.

Answer: B

NEW QUESTION # 15

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create complex, repeated work processes with iterative cycles
- B. To create standard procedures from SAP Signavio Process Navigator
- C. To create cross-product workflow procedures
- D. To create business processes with a high number of people involved in a pre-defined sequence
- E. To create very simple release or approval procedures

Answer: A,C,D

Explanation:

SAP S/4HANA Cloud Business Workflows are designed to enhance and automate business processes within the organization. They serve multiple purposes:

* To create complex, repeated work processes with iterative cycles: These workflows are designed to handle intricate processes that occur regularly within the business environment, allowing for automation and efficiency in tasks that require repetition and involve multiple steps or conditions.

* To create cross-product workflow procedures: This capability allows for the integration of various SAP products and services into a cohesive workflow, ensuring smooth and interconnected operations across different aspects of the business. It enables workflows that span across different SAP applications and solutions, providing a unified approach to managing business processes.

* To create business processes with a high number of people involved in a pre-defined sequence: SAP S

/4HANA Cloud Business Workflows are capable of handling processes that involve many participants, orchestrating the sequence of tasks to be completed by different individuals or departments. This ensures that each step of the process is executed in the right order by the right person, enhancing collaboration and efficiency.

NEW QUESTION # 16

In which deployment models is application management the responsibility of the customer? Note: There are 3 correct answers to this question.

- A. Infrastructure as a Service
- B. On premise
- C. Platform as a Service
- D. Private Cloud
- E. Software as a Service

Answer: B,C,D

Explanation:

In different deployment models, the responsibility for application management varies, with the customer typically taking on more responsibility in certain models:

* Platform as a Service (PaaS): In this model, the customer is responsible for managing the applications they develop or deploy on the platform, even though the provider manages the underlying infrastructure, operating systems, and middleware.

* On premise: In an on-premise deployment, the customer has full responsibility for managing both the applications and the infrastructure they run on. This includes maintenance, updates, security, and compliance for both the applications and the hardware/software infrastructure.

* Private Cloud: Similar to on-premise deployments, customers in a private cloud model are typically responsible for managing their applications, including SAP S/4HANA Cloud Public Edition. The cloud provider may manage the cloud infrastructure and virtualization layer, but the customer often handles application-level management tasks, including updates, customization, and user management.

These deployment models contrast with Software as a Service (SaaS), where the service provider is generally responsible for managing the application, including its maintenance, updates, and availability.

NEW QUESTION # 17

Which tasks are mandatory before you can migrate data for a specific object? Note: There are 2 correct answers to this question.

- A. All previous migration projects are in the "Finished" status
- B. Permission to migrate the data has been assigned
- C. You select the same migration method previously used for other objects
- D. Predecessor objects have been migrated

Answer: B,D

Explanation:

Before you can migrate data for a specific object, you need to ensure that the following tasks are completed:

* Predecessor objects have been migrated: Some migration objects depend on other migration objects that need to be migrated first. For example, before you can migrate sales orders, you need to migrate customers, products, and pricing conditions. You can check the dependencies of migration objects in the Migration Cockpit or in the Migration Object Modeler12.

* Permission to migrate the data has been assigned: In addition to having permission to access the Migrate Your Data app, you need permission to migrate each type of data. This is because the Migration Cockpit tool uses the same APIs and technical checks that would be done if you were to create a new data value through the respective application. For example, if you need to create a new
