Latest ADA-C01 Exam Camp | Free ADA-C01 Brain Dumps

P.S. Free 2025 Snowflake ADA-C01 dumps are available on Google Drive shared by DumpsReview: https://drive.google.com/open?id=1Of9lri0s3eFBy_eYhDC6Awsg-bK6xUAM

Tens of thousands of our worthy customers have been benefited by our ADA-C01 exam questions. Of course, your gain is definitely not just a ADA-C01 certificate. Our ADA-C01 study materials will change your working style and lifestyle. You will work more efficiently than others. Our ADA-C01 Training Materials can play such a big role. What advantages does it have? You can spend a few minutes free downloading our demos to check it out. And you will be surprised by the high-quality.

Snowflake ADA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	• Account Management and Data Governance: This section of the exam measures the skills of Data Governance Managers and Database Administrators and covers account organization, access control, and regulatory data protection. Candidates will learn how to manage organizational accounts, encryption keys, and Tri-Secret Secure implementations. It focuses on applying best practices in ORGADMIN and ACCOUNTADMIN roles, implementing masking and row access policies, and performing data classification and tagging. The domain also emphasizes data auditing, account identifiers, and effective management of tables, views, and query operations to support enterprise-wide governance standards.
Topic 2	• Snowflake Security, Role-Based Access Control (RBAC), and User Administration: This section of the exam measures the skills of Snowflake Administrators and Cloud Security Engineers and covers authentication, access control, and network management in Snowflake. Candidates must understand how to configure authentication methods such as SSO, MFA, OAuth, and key-pair authentication, and how to manage network policies and private connectivity. The domain also tests knowledge of user and role management using SCIM, designing access control architecture, and applying the RBAC framework to ensure secure user authorization and data protection within Snowflake environments.

Topic 3	• Data Sharing, Data Exchange, and Snowflake Marketplace: This section of the exam measures the skills of Data Integration Specialists and Data Platform Administrators and covers managing and implementing data-sharing solutions within Snowflake. It evaluates understanding of data sharing models across regions and clouds, secure data sharing methods, and managing provider-consumer relationships. The domain also includes the use of Snowflake Data Exchange and Marketplace to publish, consume, and manage data listings, ensuring secure collaboration and efficient data monetization.
Topic 4	• Disaster Recovery, Backup, and Data Replication: This section of the exam measures the skills of Disaster Recovery Engineers and Cloud Operations Managers and covers Snowflake methods for ensuring business continuity. Candidates must understand how to replicate databases and account-level objects, implement failover strategies, and perform backup and restoration through Time Travel and Fail-safe features. The domain emphasizes replication across accounts, handling data consistency during failover, and applying cost-efficient disaster recovery strategies to maintain availability during outages or regional failures.
Topic 5	• Performance Monitoring and Tuning: This section of the exam measures the skills of Cloud Infrastructure Engineers and Performance Analysts and focuses on optimizing Snowflake compute and storage resources. Candidates will need to understand how to configure and manage virtual warehouses, evaluate query profiles, and apply caching and clustering strategies for performance tuning. It also includes monitoring concurrency, resource utilization, and implementing cost optimization strategies. The ability to interpret, explain plans, apply search optimization, and manage cost controls is key for maintaining efficient Snowflake environments.

Free ADA-C01 Brain Dumps, Valid Dumps ADA-C01 Questions

We are concerted company offering tailored services which include not only the newest and various versions of ADA-C01 practice guide, but offer one-year free updates of our ADA-C01 exam questions services with patient staff offering help 24/7. So there is considerate and concerted cooperation for your purchasing experience accompanied with patient staff with amity. Their enrichment is dependable and reliable on the ADA-C01 training braindumps.

Snowflake SnowPro Advanced Administrator Sample Questions (Q62-Q67):

NEW QUESTION # 62
An Administrator is evaluating a complex query using the EXPLAIN command. The Globalstats operation indicates 500 partitionsAssigned.
The Administrator then runs the query to completion and opens the Query Profile. They notice that the partitions scanned value is 429.
Why might the actual partitions scanned be lower than the estimate from the EXPLAIN output?

- A. In-flight data compression will result in fewer micro-partitions being scanned at the virtual warehouse layer than were identified at the storage layer.
- B. The GlobalStats partition assignment includes the micro-partitions that will be assigned for preservation of the query results.
- C. Runtime optimizations such as join pruning can reduce the number of partitions and bytes scanned during query execution.
- D. The EXPLAIN results always include a 10-15% safety factor in order to provide conservative estimates.

Answer: C

Explanation:
Explanation
The EXPLAIN command returns the logical execution plan for a query, which shows the upper bound estimates for the number of partitions and bytes that might be scanned by the query1. However, these estimates do not account for the runtime optimizations that Snowflake performs to improve the query performance and reduce the resource consumption2. One of these optimizations is join pruning, which eliminates unnecessary partitions from the join inputs based on the join predicates2. This can result in fewer partitions and bytes scanned than the estimates from the EXPLAIN output3. Therefore, the actual partitions scanned value in the Query Profile can be lower than the partitionsAssigned value in the EXPLAIN output4.

NEW QUESTION # 63
Which commands can be performed by a user with the ORGADMIN role but not the ACCOUNTADMIN role? (Select TWO).

- A. SELECT SYSTEM$GLOBAL_ACCOUNT_SET_PARAMETER (
- B. SHOW USERS;
- C. SHOW REGIONS;
- D. SHOW ORGANIZATION ACCOUNTS;
- E. GRANT ROLE ORGADMIN TO USER <username>;

Answer: A,D

Explanation:
'ACCOUNT LOCATOR',
'ENABLE ACCOUNT DATABASE_REPLICATION',
'true'
);
Explanation:
According to the Snowflake documentation1, the ORGADMIN role is a special system role that is responsible for managing operations at the organization level, such as creating and viewing accounts, enabling database replication, and setting global account parameters. The ACCOUNTADMIN role is a system role that is responsible for managing operations at the account level, such as creating and managing users, roles, warehouses, databases, and shares. Therefore, the commands that can be performed by the ORGADMIN role but not the ACCOUNTADMIN role are:
* SHOW ORGANIZATION ACCOUNTS: This command lists all the accounts in the organization and their properties, such as region, edition, and status2. The ACCOUNTADMIN role can only show the current account and its properties using the SHOW ACCOUNTS command3.
* SELECT SYSTEM$GLOBAL_ACCOUNT_SET_PARAMETER: This function sets a global account parameter for an account in the organization, such as enabling account database replication4. The ACCOUNTADMIN role can only set local account parameters using the ALTER ACCOUNT command.
Option A is incorrect because the SHOW REGIONS command can be executed by any role, not just the ORGADMIN role.
Option B is incorrect because the SHOW USERS command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the MONITOR privilege on the account. Option D is incorrect because the GRANT ROLE ORGADMIN TO USER <username> command can be executed by the ACCOUNTADMIN role, as well as any role that has been granted the ORGADMIN role1.

NEW QUESTION # 64
An Administrator wants to delegate the administration of a company's data exchange to users who do not have access to the ACCOUNTADMIN role.
How can this requirement be met?

- A. Grant modify on data exchange EXCHANGE_NAME to ROLE_NAME;
- B. Grant imported privileges on data exchange EXCHANGE_NAME to ROLE_NAME;
- C. Grant usage on data exchange EXCHANGE_NAME to ROLE_NAME;
- D. Grant ownership on data exchange EXCHANGE_NAME to ROLE NAME;

Answer: A

Explanation:
According to the [GRANT MODIFY] documentation, the MODIFY privilege on a data exchange allows a role to perform administrative tasks on the data exchange, such as inviting members, approving profiles, and reviewing listings. This privilege can be granted by the ACCOUNTADMIN role or a role that already has the MODIFY privilege on the data exchange. Therefore, to delegate the administration of a company's data exchange to users who do not have access to the ACCOUNTADMIN role, the best option is to grant the MODIFY privilege on the data exchange to a role that the users can assume. The other options are incorrect because:
* A. There is no such privilege as IMPORTED PRIVILEGES in Snowflake. The correct privilege name is IMPORT SHARE, which allows a role to create a database from a share. This privilege is not related to the administration of a data exchange, but to the consumption of shared data.
* C. There is no such privilege as OWNERSHIP in Snowflake. The correct privilege name is OWNED BY, which indicates the role that owns an object and has full control over it. However, this privilege cannot be granted or revoked, but only transferred by the current owner to another role using the GRANT OWNERSHIP command. Therefore, this option is not feasible for delegating the

administration of a data exchange.
* D. The USAGE privilege on a data exchange allows a role to access the data exchange and view the available data listings. This privilege does not allow a role to perform administrative tasks on the data exchange, such as inviting members, approving profiles, and reviewing listings. Therefore, this option is not sufficient for delegating the administration of a data exchange.

NEW QUESTION # 65
In which scenario will use of an external table simplify a data pipeline?

- A. When accessing a Snowflake table that references data files located in cloud storage
- B. When accessing a Snowflake table from a relational database
- C. When accessing a Snowflake table from an external database within the same region
- D. When continuously writing data from a Snowflake table to external storage

Answer: A

Explanation:
According to the Introduction to External Tables documentation, an external table is a Snowflake feature that allows you to query data stored in an external stage as if the data were inside a table in Snowflake. The external stage is not part of Snowflake, so Snowflake does not store or manage the stage. This simplifies the data pipeline by eliminating the need to load the data into Snowflake before querying it. External tables can access data stored in any format that the COPY INTO <table> command supports, such as CSV, JSON, AVRO, ORC, or PARQUET. The other scenarios do not involve external tables, but rather require data loading, unloading, or federation.

NEW QUESTION # 66
What are benefits of using Snowflake organizations? (Select TWO).

- A. Administrators can change Snowflake account editions on-demand based on need.
- B. Administrators can monitor and understand usage across all accounts in the organization.
- C. Administrators have the ability to create accounts in any available cloud provider or region.
- D. User administration is simplified across all accounts within the organization.
- E. Administrators can simplify data movement across all accounts within the organization.

Answer: B,C

Explanation:
Explanation
According to the Snowflake documentation1, organizations are a feature that allows linking the accounts owned by a business entity, simplifying account management and billing, replication and failover, data sharing, and other account administration tasks. Some of the benefits of using organizations are:
*Administrators can monitor and understand usage across all accounts in the organization using the ORGANIZATION_USAGE schema, which provides historical usage data for all accounts in the organization via views in a shared database named SNOWFLAKE2. This can help to optimize costs and performance across the organization.
*Administrators have the ability to create accounts in any available cloud provider or region using the CREATE ACCOUNT command, which allows specifying the cloud platform and region for the new account3.
This can help to meet the business needs and compliance requirements of the organization.
Option A is incorrect because administrators cannot change Snowflake account editions on-demand based on need, but rather have to contact Snowflake Support to request an edition change4. Option C is incorrect because administrators cannot simplify data movement across all accounts within the organization, but rather have to enable account database replication for both the source and target accounts, and use the ALTER DATABASE ... ENABLE REPLICATION TO ACCOUNTS command to promote a local database to serve as the primary database and enable replication to the target accounts5. Option D is incorrect because user administration is not simplified across all accounts within the organization, but rather requires creating and managing users, roles, and privileges for each account separately, unless using a federated authentication method such as SSO or SCIM.

NEW QUESTION # 67
.....

Our company has taken a lot of measures to ensure the quality of our ADA-C01 preparation materials. It is really difficult for us to

hire a professional team, regularly investigate market conditions, and constantly update our ADA-C01 exam questions. But we persisted for so many years. And our quality of our ADA-C01 study braindumps are praised by all of our worthy customers. And you can always get the most updated and latest ADA-C01 training guide if you buy them.
