Quiz 2026 C_CPI_2506 Best Vce - Realistic SAP Certified Associate - Integration Developer Practice Test

SurePassExams is the best catalyst to help IT personage be successful. Many people who have passed some IT related certification exams used our SurePassExams's training tool. Our SurePassExams expert team use their experience for many people participating

in SAP certification C_CPI_2506 exam to develop the latest effective training tools, which includes SAP C_CPI_2506 Certification simulation test, the current exam and answers. Our SurePassExams's test questions and answers have 95% similarity with the real exam. With SurePassExams's training tool your SAP certification C_CPI_2506 exams can be easy passed.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	<ul style="list-style-type: none"> • Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 3	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

SAP Certified Associate - Integration Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, properties, attachment
- **B. Header, body, attachment**
- C. Header, Exchange ID, in-message
- D. Header, body, properties

Answer: B

Explanation:

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats.

Reference: The Camel Data Model in a Nutshell | SAP Help Portal, Data Formats :: Apache Camel

NEW QUESTION # 34

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- **A. EventMeshAdmin and EventMeshDevelop**
- B. SecurityAdmin and SecurityDevelop
- C. ApplicationAdmin and ApplicationDevelop
- D. IntegrationAdmin and IntegrationDevelop

Answer: A

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and pool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh. Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

NEW QUESTION # 35

You configured a content modifier as follows: Action: Create | Name: ProductID | Source Type: XPath Source Value: //ProductID | Data Type: java.lang.string. After testing the content modifier, you receive an error message that contains the following fragment: "Java.lang.ClassNotFoundException: java.lang.string..." What caused the error message?

- A. Incorrect source type
- **B. Incorrect data type**
- C. Incorrect name
- D. Incorrect source value

Answer: B

Explanation:

In SAP Cloud Integration, when defining Content Modifier properties, the Java data type names are case-sensitive.

Correct type # java.lang.String

In the configuration, java.lang.string was used (lowercase "s"), which causes a ClassNotFoundException, since Java cannot find the class.

Other options are correct in form:

Source Type = XPath # Valid.

Source Value = //ProductID # Valid XPath.

Name = ProductID # Valid.

Thus, the error occurred because of incorrect data type specification.

NEW QUESTION # 36

You want to access individual entities of an HTTP call over XPath. What must you do if no namespace mapping exists?

- A. Remove the XML prolog
- B. Convert the namespaces to JSON.
- C. Convert the namespaces to XML
- **D. Remove the namespaces.**

Answer: D

Explanation:

If no namespace mapping exists, you must remove the namespaces to access individual entities of an HTTP call over XPath.

Namespaces are prefixes that identify the source or context of an XML element or attribute. If the namespaces are not mapped to a URI, they can cause errors or conflicts when using XPath expressions. Therefore, you must remove the namespaces before applying XPath queries.

NEW QUESTION # 37

Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Publish/subscribe and request/reply messaging
- **B. Publish/subscribe and point-to-point messaging**
- C. Point-to-point and multicast messaging
- D. Request/reply messaging and multicast messaging

Answer: B

Explanation:

SAP Event Mesh supports two key asynchronous messaging patterns:

Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.

Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.

Other options are incorrect:

Request/Reply # Synchronous pattern, not the focus of Event Mesh.

Multicast messaging # Not explicitly supported; handled through Pub-Sub.

Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

NEW QUESTION # 38

.....

Our SAP C_CPI_2506 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening in the world. As the questions of our SAP C_CPI_2506 Exam Dumps are involved with heated issues and customers who prepare for the SAP C_CPI_2506 exams must haven't enough time to keep trace of C_CPI_2506 exams all day long.
