## Plat-Dev-301 Latest Dumps: Salesforce Certified Platform Developer II - Multiple Choice & Plat-Dev-301 Dumps Torrent & Plat-Dev-301 Practice Questions

The desktop Salesforce Plat-Dev-301 exam simulation software works only on Windows, but the web-based Salesforce Plat-Dev-301 practice exam is compatible with all operating systems. You can take the online Salesforce Plat-Dev-301 Mock Test without software installation via Chrome, Opera, Firefox, or another popular browser.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q147-Q152):

**NEW QUESTION # 147**
A developer needs to send Account records to an external system for backup purposes. The process must take a snapshot of Accounts as they are saved and then make a callout to a RESTful web service. The web service can only receive, at most, one record per call.
What should a developer do to implement these requirements?

- A. Create a future method.
- B. Implement platform events.
- C. Implement the Queveable interface.
- D. Expose an Apex class as e web service.

**Answer: D**

**NEW QUESTION # 148**
What should be added to the setup, in the location indicated, for the unit test above to create the controller extension for the test?

- A. AccountControllerExt extension = new AccountControllerExt (acct);
- B. ApexPages.Standardcontroller sc = new ApexPages. Standardcontroller (acct.Id) ;AccountControllerExt extension = new AccountControllerExt(sc) ;om
- C. ApexPages.StandardController sc = new ApexPages.StandardController(acct);AccountcontrollerExt extension = new AccountControllerExt(sc);
- D. AccountControllerExt extension = new AccountControllerExt (acct.Id) ;

**Answer: C**

Explanation:
For the unit test to create the controller extension, the correct setup is to instantiate a new ApexPages.StandardController with the Account record and then use it to instantiate the AccountControllerExt. This sets up the controller extension with the context of the provided Account record.

**NEW QUESTION # 149**
The head of recruiting at Universal Containers (UC) wants to provide all internal users the ability to search for open positions by role, department, and location via a new recruiting app. In addition to search, users of the app should be able to refer a friend, apply for a position, and review the status of their current submissions.
The app will be surfaced to UC's existing iOS and Android users via the standard mobile app that Salesforce provides. It has a custom user interface design and offline access is not required.
Given these requirements, what is the recommended approach to develop the app?

- A. Lightning Web Components
- B. Visualforce
- C. Lightning Experience Builder
- D. Salesforce SDK

**Answer: A**

**NEW QUESTION # 150**
As part of a custom interface, a developer team creates various new Lightning web components. Each of the components handles errors using toast messages. When the development is complete, all the components are added to the same Lightning page.
During acceptance testing, users complain about the long chain of toast messages that display when errors occur loading the components.
Which two techniques should the developer implement to improve the user experience?
Choose 2 answers

- A. Use the window.alert() method to display the error messages
- B. Use a <tamplate> tag to display in-place error messages.
- C. Use public, properties on each component to display the error messages.
- D. Use a Lightning web component to aggregate and display all errors

**Answer: C,D**

Explanation:
The scenario describes a common issue when multiple components are used on the same Lightning page and each component manages its error handling independently, leading to a "long chain of toast messages" which can be overwhelming for users.
To improve user experience, the developers can implement the following techniques:
A . Use a Lightning web component to aggregate and display all errors: This method involves creating a centralized component responsible for handling all error messages. This component would receive error notifications from other components and then display them in a user-friendly manner. The benefit of this approach is that it provides a single, consistent interface for error messages, reducing the clutter and confusion that can be caused by multiple toasts.
D . Use public properties on each component to display the error messages: By using public properties, components can expose their error states to a parent or orchestrating component, which can then display these errors in a single, consolidated way. This avoids the issue of multiple toast notifications and allows for a more integrated error handling experience.
The other options presented are less ideal:

B . Using the window.alert() method is not recommended in a professional Salesforce environment as it is considered a disruptive way to show errors and does not align with the Salesforce Lightning design system.
C . Using a <template> tag to display in-place error messages could be a viable option for displaying error messages within the component itself, but it does not address the issue of multiple errors stacking up from different components as described in the scenario.
For building a centralized error handling component: Lightning Web Components Developer Guide - Error Handling For implementing public properties: Lightning Web Components Developer Guide - Public Properties

**NEW QUESTION # 151**
A company has an Apex process that makes multiple extensive database operations and web service callouts. The database processes and web services can take a long time to run and must be run sequentially.
How should the developer write this Apex code without running into governor limits and system limitations?

- A. Use Limits class to stop entire process once governor limits are reached.
- B. Use Apex Scheduler to schedule each process.
- C. Use multiple 3zutuze methods for each process and callout.
- D. Use Queueable Apex to chain the jobs to run sequentially.

**Answer: D**

Explanation:
Queueable Apex is suitable for complex processes that require chaining jobs to run sequentially. It can handle long-running processes without hitting governor limits, as each chained job runs in a new transaction with its own set of governor limits.

**NEW QUESTION # 152**
.....

Our Plat-Dev-301 training quiz is the top selling products in the market. You will save a lot of preparation troubles if you purchase our Plat-Dev-301 study materials. Our Plat-Dev-301 exam braindumps are highly similar to the real test. Almost all questions of the real exam will be predicated accurately in our Plat-Dev-301 Practice Questions, which can add you passing rate of the exam. And you will find that our prices for the exam products are quite favorable.
