

# Exam JN0-224 Registration - Reliable JN0-224 Braindumps Pdf

What's more, part of that PassCollection JN0-224 dumps now are free: <https://drive.google.com/open?id=1ACt0IUGvBYhWvK5Grop4noBL-HZx9MaN>

Our company is professional brand established for compiling JN0-224 exam materials for candidates, and we aim to help you to pass the examination as well as getting the related JN0-224 certification in a more efficient and easier way. Owing to the superior quality and reasonable price of our JN0-224 Exam Materials, our company has become a top-notch one in the international market. Our JN0-224 exam torrents are not only superior in price than other makers in the international field, but also are distinctly superior in many respects.

Don't let the JN0-224 exam stress you out! Prepare with PassCollection JN0-224 exam dumps and boost your confidence in the real JN0-224 exam. We ensure your road towards success without any mark of failure. Time is of the essence - don't wait to ace your JN0-224 Certification Exam! Register yourself now.

## Hot Exam JN0-224 Registration | Amazing Pass Rate For JN0-224 Exam | Trusted JN0-224: Automation and DevOps, Associate (JNCIA-DevOps)

JN0-224 exam dumps at PassCollection are always kept up to date. Every addition or subtraction of JN0-224 exam dumps in the exam syllabus is updated in our brain dumps instantly. Practice on real JN0-224 exam dumps and we have provided their answers too for your convenience. If you put just a bit of extra effort, you can score the highest possible score in the Real JN0-224 Exam because our JN0-224 exam preparation dumps are designed for the best results.

### Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q38-Q43):

#### NEW QUESTION # 38

YAML uses which two data structures? (Choose two.)

- A. objects
- B. arrays
- C. mappings
- D. sequences

**Answer: C,D**

Explanation:

YAML (YAML Ain't Markup Language) primarily uses two data structures:

Mappings: These are key-value pairs, similar to dictionaries or hashes in programming languages. In YAML, mappings are used to represent associative arrays or objects. They are defined with a colon (:) separating the key from the value.

Example:

key: value

name: John Doe

Sequences: These are ordered lists of items, equivalent to arrays or lists in other programming languages. Sequences in YAML are denoted by a dash (-) followed by a space and then the item.

Example:

fruits:

- Apple

- Banana

- Cherry

Detailed Explanation:

Mappings (B) allow you to define relationships between keys and values, making it possible to represent more complex data structures like dictionaries or objects.

Sequences (C) allow you to represent ordered collections, which is important for listing elements that must maintain a specific order.

YAML is often used in configuration files and data serialization in DevOps environments, such as in Ansible playbooks, Kubernetes manifest files, and CI/CD pipeline definitions. Its simplicity and human-readable format make it a popular choice for these applications.

Reference:

YAML Official Documentation: YAML's specification outlines these core data structures.

Juniper Automation and DevOps Documentation: Provides best practices for using YAML in network automation scripts and configuration management.

### NEW QUESTION # 39

Which development model is the classic approach to software development?

- A. Kanban
- B. Lean
- C. Scrum
- D. Waterfall

**Answer: D**

### NEW QUESTION # 40

You are asked to write an on-box script that will be triggered when a specific interface on a Junos device goes down.

Which type of on-box script should you use to accomplish this task?

- A. SNMP
- B. event
- C. commit
- D. operation

**Answer: B**

Explanation:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

### NEW QUESTION # 41

Exhibit.

```
[edit system services]
user@router# show
rest {
  https {
    server-certificate cert1;
  }
}
```

The exhibit shows a terminal window with a Juniper logo at the bottom. The text displays a configuration snippet for REST services on a Juniper router. The configuration is in the 'edit' mode for 'system services'. The user has entered 'show' to display the current configuration for the 'rest' service. The output shows that the 'rest' service is configured with an 'https' sub-section containing a 'server-certificate' named 'cert1'. The Juniper logo is visible at the bottom of the terminal window.

Referring to the exhibit, which statement about REST is correct?

- A. The device is configured to allow HTTPS connections on port 3443.
- B. The device is configured to allow only two simultaneous REST connections.
- C. The device is configured to allow HTTP connections on port 3030.
- D. The device is configured to allow connections from the REST API Explorer

**Answer: A**

#### NEW QUESTION # 42

Which two statements about NETCONF layers are correct? (Choose two.)

- A. NETCONF layers use the messages layer to receive RPCs from a remote NETCONF server.
- B. NETCONF layers use the messages layer to send RPCs to a remote NETCONF server.
- C. NETCONF layers use the operations layer to receive RPCs from a remote NETCONF server.
- D. NETCONF layers use the operations layer to send RPCs to a remote NETCONF server.

**Answer: B,C**

Explanation:

NETCONF (Network Configuration Protocol) is a standard protocol defined for managing network devices. NETCONF operates in a layered architecture, which includes the following key layers:

Operations Layer: This layer deals with the actual operations like <get-config>, <edit-config>, <copy-config>, and others. It receives RPC (Remote Procedure Call) requests from a remote NETCONF client and processes these requests.

Messages Layer: This layer is responsible for encoding the RPCs and sending them over the network. It handles the communication between the NETCONF client and server, ensuring that the RPC messages are correctly formatted (usually in XML) and transmitted.

Statement B is correct because the Messages layer is responsible for sending RPCs to a remote NETCONF server.

Statement C is correct because the Operations layer is where the NETCONF server receives and processes the RPCs sent by the client.

Supporting Reference:

Juniper Networks NETCONF Documentation: Provides a detailed breakdown of the NETCONF protocol layers and their functions.

RFC 6241: The official specification for NETCONF, which describes the layered architecture, including the operations and messages layers.

#### NEW QUESTION # 43

.....

The study system of our company will provide all customers with the best study materials. If you buy the JN0-224 latest questions of our company, you will have the right to enjoy all the JN0-224 certification training dumps from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the JN0-224 training materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the JN0-224 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest
