Which of the following statements about DHCP snooping is incorrect?

- A. DHCP snooping can prevent attacks by configuring trusted interfaces.
- B. After DHCP snooping is enabled in the view of an interface, it takes effect for all DHCP messages on the interface.
- **C. After DHCP snooping is enabled in the view of a VLAN, it takes effect for the VLAN's DHCP messages received by all the interfaces of the device.**
- D. After DHCP snooping is enabled globally, the device processes only DHCPv4 messages by default if no parameter is specified.

Answer: C

Explanation:

Comprehensive and Detailed In-Depth

The statement A is incorrect because enabling DHCP snooping in the VLAN view only takes effect on interfaces within that specific VLAN that have DHCP snooping configured. It does not automatically apply to all interfaces of the device. Each interface within the VLAN must individually be configured or marked as trusted/untrusted.

B: Correct, as DHCP snooping, when enabled globally without any additional specifications, defaults to processing DHCPv4

messages.

C: Correct, as DHCP snooping can protect against DHCP spoofing attacks by marking interfaces as trusted or untrusted.

D: Correct, enabling DHCP snooping on an interface means it will monitor all DHCP messages on that specific interface.
