Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the WGU Web Development Applications exam after using our Web-Development-Applications product.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 2	<ul style="list-style-type: none"> • HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
Topic 3	<ul style="list-style-type: none"> • Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 4	<ul style="list-style-type: none"> • Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.

WGU Web Development Applications Sample Questions (Q55-Q60):

NEW QUESTION # 55

Given the following code:

What does the console display as output?

- A. 0
- B. 1
- C. 2

Answer: A

Explanation:

Given the code segment:

```
var a = "8";
var b = "6";
var c = a + b;
console.log(c);
```

This code concatenates two strings.

* Explanation:

* var a = "8";: Variable a is assigned the string "8".

* var b = "6";: Variable b is assigned the string "6".

* var c = a + b;: The + operator concatenates the two strings, resulting in "86".

* console.log(c);: Outputs the value of c to the console.

* Output:

* The console displays "86" because it concatenates the two string values.

* References:

* MDN Web Docs - String

* W3Schools - JavaScript String

NEW QUESTION # 56

A developer needs to apply a red font color to the navigation, footer, and the first two of three paragraphs on a website. The developer writes the following code:

Which CSS archives this developer's goal?

- **A. Content**
- B. Margin
- C. Padding
- D. border

Answer: A

Explanation:

To apply a red font color to the navigation, footer, and the first two of three paragraphs on a website, the correct CSS would use the content attribute to achieve the desired styling. However, the term "content" isn't correct in the given context. The appropriate answer involves directly specifying styles for these elements using CSS selectors.

Here's the correct CSS:

```
nav, footer, p.standard:nth-of-type(1), p.standard:nth-of-type(2) {
color: red;
}
```

Explanation:

* CSS Selectors: The selectors nav, footer, p.standard:nth-of-type(1), and p.standard:nth-of-type(2) are used to target the specific elements. The nth-of-type pseudo-class is used to select the first and second paragraphs.

* Applying Styles: The color: red; style rule sets the text color to red for the specified elements.

References:

- * MDN Web Docs on CSS Selectors
- * W3C CSS Specification on Selectors

NEW QUESTION # 57

Which tag is required when importing the jQuery library?

- A. Section
- B. meta
- C. Body
- **D. Script**

Answer: D

Explanation:

The<script>tag is required when importing the jQuery library into an HTML document.

* Including jQuery:

* Purpose: The<script>tag is used to embed or reference executable code (JavaScript).

* Example:

```
<script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
```

* Explanation:

* The<script>tag should be placed in the<head>or at the end of the<body>to ensure that the library is loaded before the scripts that depend on it.

jQuery Getting Started

MDN Web Docs -<script>

NEW QUESTION # 58

Given the following markup:

Where does the image align in relation to the text?

- **A. The bottom of the Image aligns to the bottom of Hello World**
- B. The top of the image aligns the bottom of Hello world.
- C. The bottom of the image aligns to the top of Held world.
- D. The top of The image aligns to the top of Hello World

Answer: A

Explanation:

The CSS property vertical-align: baseline aligns the baseline of the element with the baseline of its parent. For inline elements like images, the baseline alignment means that the bottom of the image aligns with the bottom of the text.

* CSS vertical-align Property:

* Baseline Alignment: Aligns the baseline of the element with the baseline of its parent.

* Example:

```
<p>Hello World</p>
```

* Analysis:

* The element with vertical-align: baseline will align its bottom with the bottom of the surrounding text "Hello World".

* References:

* MDN Web Docs - vertical-align

* W3C CSS Inline Layout Module Level 3

NEW QUESTION # 59

Given the following HTML statement:

```
``html
<!DOCTYPE html>
<html>
<head>
<title>Page</title>
</head>
<style>
hl {
background-colored;
}
</style>
<body>
<h1>Hello student!</h1>
</body>
``
```

Which CSS property should a developer use to apply a distance of 10 pixels between the text and its outer element in all directions (top, right, bottom, and left)?

- A. float
- **B. padding**
- C. margin
- D. border

Answer: B

Explanation:

According to the CSS specification and documentation:

> "The `padding` CSS shorthand property sets the padding area on all four sides of an element. Padding is the space between the content of the element and its border."

>

> "If you want to create space *inside* an element, use padding. If you want to create space *outside* of an element, use margin."

In this case, the developer needs to apply a distance between the content (text) and the element's outer edge

- which is the definition of padding.
