Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q237-Q242):

NEW QUESTION # 237

During a change management assessment, what should be evaluated?

- **A. All of the above**
- B. The level of user acceptance and satisfaction with the changes
- C. The impact of proposed changes on system functionality
- D. The effectiveness of the change management process

Answer: A

Explanation:

During a change management assessment, multiple aspects should be evaluated. Firstly, the impact of proposed changes on system functionality needs to be assessed to ensure that the changes do not negatively affect the overall performance or stability of the system. Secondly, the level of user acceptance and satisfaction with the changes should be evaluated to determine the effectiveness of the change management process and whether it meets the needs and expectations of the users. Assessing these aspects helps in identifying any areas that require improvement. Therefore, all the options mentioned in the

NEW QUESTION # 238

Which of the following options is an example of a cybersecurity news and subscription service?

- A. Email filtering software
- B. VPN (Virtual Private Network)
- **C. SIEM (Security Information and Event Management) system**
- D. Firewall

Answer: C

Explanation:

A SIEM system is an example of a cybersecurity news and subscription service. It collects and analyzes security event data from various sources and provides real-time alerts and reports to enhance threat detection and management. It provides valuable insights into the cybersecurity landscape, including news and updates related to security incidents, vulnerabilities, and emerging threats.

NEW QUESTION # 239

Which protocol is used for broadcasting and resolving MAC addresses to IP addresses?

- A. TCP
- **B. ARP**
- C. UDP
- D. ICMP

Answer: B

Explanation:

ARP (Address Resolution Protocol) is used for broadcasting and resolving MAC (Media Access Control) addresses to IP addresses within a local network. It helps devices determine the MAC address associated with a given IP address, enabling proper communication on the network. ARP operates at the data link layer of the OSI model.

NEW QUESTION # 240

Which of the following best describes social engineering?

- A. A physical security control
- **B. A method of manipulating individuals to disclose sensitive information**
- C. A type of malware attack
- D. A network security protocol

Answer: B

Explanation:

Social engineering refers to the practice of manipulating and deceiving individuals into revealing sensitive information or performing certain actions that may compromise security. It involves exploiting human psychology and trust to gain unauthorized access to systems or obtain confidential information. Social engineering tactics can include phishing emails, impersonation, pretexting, or other forms of manipulation to trick individuals into divulging passwords, account numbers, or other confidential data.

NEW QUESTION # 241

Which security measure can prevent unauthorized devices from automatically connecting to a corporate network through unused switch ports?

- A. VLAN trunking
- **B. Port security**
- C. VPN
- D. NAT

Answer: B

Explanation:

The CCST Cybersecurity Study Guide explains that port security on switches can be configured to limit the number of MAC addresses allowed on a port, or to restrict it to specific devices.

"Port security can prevent unauthorized access by limiting or specifying the MAC addresses allowed to connect through a given switch port. This mitigates risks from rogue devices connecting to the network." (CCST Cybersecurity, Basic Network Security Concepts, Switch Security section, Cisco Networking Academy)

NEW QUESTION # 242

.....

Our Cisco Certified Support Technician (CCST) Cybersecurity (100-160) exam dumps are top-notch and designed to help students pass the Cisco Certified Support Technician (CCST) Cybersecurity (100-160) test on the first try.
