People is faced with many unknown factors and is also surrounded by unknown temptations in the future. Therefore, we must lay a solid foundation for my own future when we are young. Are you ready? Lead2Passed UiPath UiPath-SAI Av1 practice test is the best. Just for the exam simulations, you will find it will be useful to actual test. More information, please look up our UiPath UiPath-SAI Av1 free demo. After you purchase our products, we offer an excellent after-sales service.

UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q15-Q20):

NEW QUESTION # 15

Can you use Queues in the Document Understanding Process?

- A. The Document Understanding Process can use Queues but the Auto Retry Functionality should be enabled.
- B. The Document Understanding Process can't use Queues because items waiting for Human Validation for more than 24h will be marked as Abandoned.

- C. The Document Understanding Process can't use Queues because items waiting for Human Validation for more than 10 days will be marked as Abandoned.
- **D. The Document Understanding Process can use Queues but the Auto Retry Functionality should be disabled.**

Answer: D

Explanation:

The Document Understanding Process is a fully functional UiPath Studio project template based on a document processing flowchart. It supports both attended and unattended robots with human-in-the-loop validation via Action Center. The process uses queues to store and process the input files, one file per queue item. However, the Auto Retry Functionality should be disabled on queues, because it can interfere with the human validation step and cause errors or duplicates. The process handles the retry mechanisms internally, using the Try/Catch and Error management features.

NEW QUESTION # 16

How do you use the Generative Classifier within UiPath Document Understanding Cloud APIs to classify a document as either an "Invoice" or a "Receipt"?

- A. By sending a GET request to `/api/framework/projects/{projectId}/classifiers/generative_classifier/classification` with a body containing prompts that specify the 'Invoice' and 'Receipt' names and descriptions.
- **B. By sending a POST request to `yapi/framework/projects/{projectId}/classifiers/generative_classifier/classification` with a body containing prompts that specify the 'Invoice' and 'Receipt' names and descriptions.**
- C. By sending a POST request to `/api/framework/projects/{projectId}/classifiers/generative_classifier/classification` with a body containing prompts that specify the 'Invoice' and 'Receipt' names and a description for their fields.
- D. By sending a PUT request to `/api/framework/projects/{projectId}/classifiers/generative_classifier/classification` without any specific classification details in the body of the request.

Answer: B

Explanation:

In UiPath Document Understanding Cloud APIs, the Generative Classifier is used to classify documents by leveraging a generative AI model. To classify a document as either an "Invoice" or a "Receipt," a POST request must be sent to the `/api/framework/projects/{projectId}/classifiers/generative_classifier/classification` endpoint. The body of this request should contain prompts specifying the classification types (in this case, "Invoice" and "Receipt") along with their corresponding descriptions. This allows the model to correctly classify incoming documents based on these predefined prompts.

NEW QUESTION # 17

When a parent label is deleted in UiPath Communications Mining, what happens to the training data for that label?

- **A. The parent label and any child labels to that parent label are removed from any reviewed messages, any messages with updated annotations are flagged for review.**
- B. The parent label is removed from any reviewed messages but the child labels to that parent label remain.
- C. The parent label is removed from any reviewed messages, messages with any child labels to that parent label are flagged for review.
- D. The parent label and any child labels to that parent label are removed from any reviewed messages.

Answer: A

Explanation:

In UiPath Communications Mining, when a parent label is deleted, both the parent and its child labels are removed from the reviewed messages. Additionally, any messages with updated annotations that were associated with those labels are flagged for review to ensure consistency in the training data.

NEW QUESTION # 18

Which scenario would be best accomplished using unattended automation?

- A. Resolving customer queries with real-time input from support agents.
- B. Generating invoices that require manual approval before issuing.
- C. Providing on-demand assistance to users for specific activities.
- **D. Running reports and sending them via email to stakeholders overnight.**

Answer: D

Explanation:

Unattended automation is ideal for tasks that can run independently without human intervention, such as scheduled activities during off-hours. Running reports and emailing stakeholders overnight is a perfect use case for unattended bots, which can execute the process autonomously.

NEW QUESTION # 19

To determine the number of characters scraped from a website in an "ExtractedText" String variable, excluding leading and trailing white-space characters, what should a developer use?

- A. `ExtractedText.Trim.Chars`
- **B. `ExtractedText.Trim.Length`**
- C. `ExtractedText.Chars`
- D. `ExtractedText.Length`

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To get the character count excluding leading and trailing spaces, `.Trim()` is used to remove whitespace and `.Length` provides the character count. So the correct expression is `ExtractedText.Trim.Length`.

* `Trim`: Removes all leading and trailing white-space characters.

* `Length`: Returns the number of characters in the string.
