

300-620 Latest Exam Price & Current 300-620 Exam Content

BTW, DOWNLOAD part of Real4exams 300-620 dumps from Cloud Storage: https://drive.google.com/open?id=17x1j31P4_wPgHggUi37UkSd_IHk_63OM

One of the main unique qualities of Real4exams Implementing Cisco Application Centric Infrastructure Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Implementing Cisco Application Centric Infrastructure (300-620) PDF dumps and Web-based software without installation. Cisco 300-620 PDF Questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Implementing Cisco Application Centric Infrastructure (300-620) exam dumps in one place for a long time.

If you are preparing for the Implementing Cisco Application Centric Infrastructure (300-620) exam dumps our 300-620 Questions help you to get high scores in your Implementing Cisco Application Centric Infrastructure (300-620) exam. Test your knowledge of the Implementing Cisco Application Centric Infrastructure (300-620) exam dumps with Real4exams Implementing Cisco Application Centric Infrastructure (300-620) practice questions. The software is designed to help with Implementing Cisco Application Centric Infrastructure (300-620) exam dumps preparation. Implementing Cisco Application Centric Infrastructure (300-620) practice test software can be used on devices that range from mobile devices to desktop computers.

2026 Professional 100% Free 300-620 – 100% Free Latest Exam Price | Current Implementing Cisco Application Centric Infrastructure Exam Content

If you buy the Software or the APP online version of our 300-620 study materials, you will find that the timer can aid you control the time. Once it is time to submit your exercises, the system of the 300-620 preparation exam will automatically finish your operation. After a several time, you will get used to finish your test on time. If you are satisfied with our 300-620 training guide, come to choose and purchase.

Cisco 300-620 exam is a certification exam that validates the knowledge and skills of IT professionals in implementing Cisco Application Centric Infrastructure (ACI). 300-620 exam is designed to test the ability of candidates to install, configure, and manage Cisco ACI solutions in data center environments. 300-620 Exam is intended for network administrators, network engineers, and other IT professionals who have experience in data center networking and virtualization.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q156-Q161):

NEW QUESTION # 156

An engineer configures an L3Out in VRF-1 that was configured for Import Route Control Enforcement. The L3Out uses OSPF to

peer with a core switch. The L3Out has one external EPG, and it has been configured with a subnet 10.1.0.0/24. Which scope must be set to force 10.1.0.0/24 to populate in the routing table for VRF-1?

- A. External Subnet for External EPG
- **B. Import Route Control Subnet**
- C. Shared Route for External EPG
- D. Export Route Control Subnet

Answer: B

NEW QUESTION # 157

Which feature dynamically assigns or modifies the EPG association of virtual machines based on their attributes?

- **A. vzAny contracts**
- B. uSeg EPGs
- C. standard contracts
- D. application EPGs

Answer: A

NEW QUESTION # 158

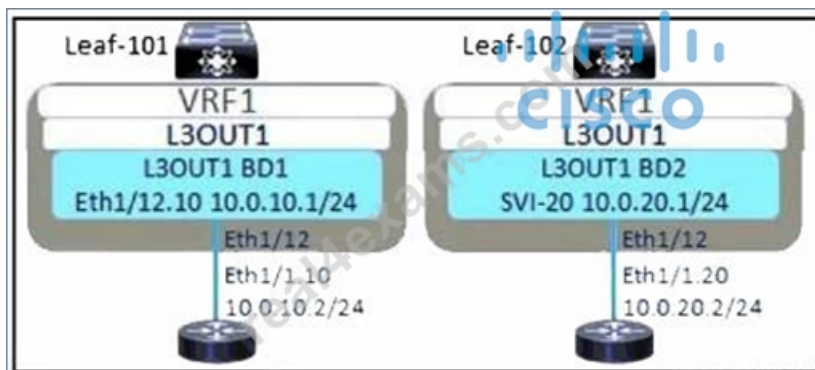

What is the result of selecting the On Demand attribute in the Deploy Immediacy feature during VMM domain association to an EPG?

- A. The EPG policy is programmed in the hardware policy CAM as soon as the policy is downloaded in the leaf software.
- **B. The EPG policy is programmed in the hardware policy CAM only when the first packet is received through the data path.**
- C. The EPG policy is downloaded to the leaf when a hypervisor is attached to a DVS, and CDP or LLDP adjacency is formed.
- D. The EPG policy is downloaded to the leaf when a hypervisor is connected, and a VM is placed in a port group.

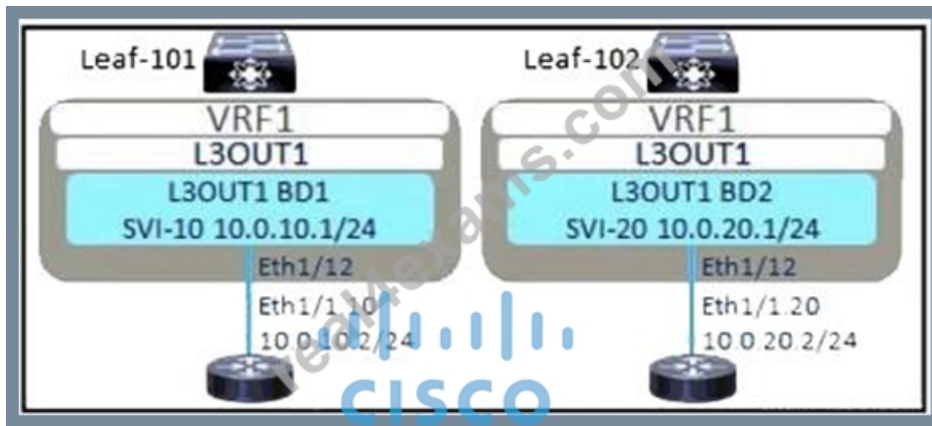

Answer: B

NEW QUESTION # 159

The customer is looking for redundant interconnection of the existing network to the new ACI fabric. Unicast and multicast traffic must be routed between the two networks. Which L3Out implementation meets these requirements?

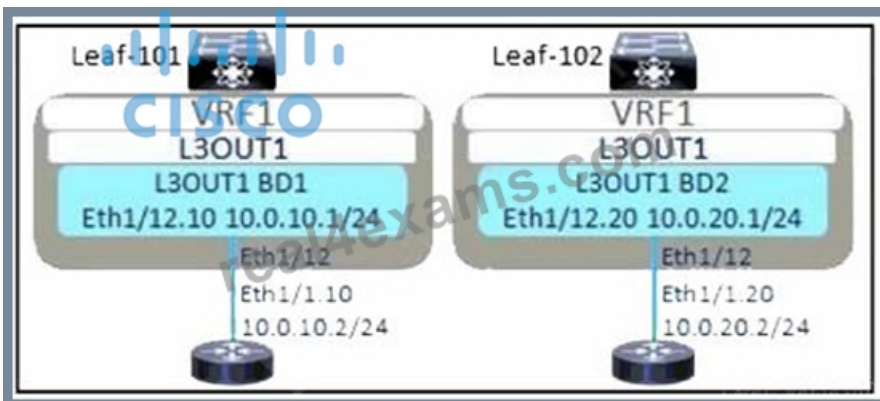

- A.

• B.

• C.

• D.

Answer: B

Explanation:

For a redundant interconnection that routes both unicast and multicast traffic, the L3Out (Layer 3 Outside) implementation in Cisco ACI should include the following:

Redundant Connections: Ensure there are at least two connections from the ACI fabric to the external network for redundancy. These connections should be to different leaf switches if possible.

Routing Protocols: Configure a routing protocol that supports both unicast and multicast routing. OSPF or EIGRP can be used for unicast, and PIM (Protocol Independent Multicast) should be configured for multicast.

Route Redistribution: Set up route redistribution between the ACI fabric and the external network to ensure that routes are shared across both networks.

Multicast Configuration: Enable multicast routing within the ACI fabric and configure the necessary multicast policies.

Contract and Policy Configuration: Define contracts and policies that allow the required unicast and multicast traffic to flow between the ACI fabric and the external network.

NEW QUESTION # 160

Refer to the exhibit. An engineer is integrating a VMware vCenter with Cisco ACI VMM domain configuration. ACI creates port-

group names with the format of "Tenant | Application | EPG".

Which configuration option is used to generate port groups with names formatted as "Tenant=Application=EPG"?

Create vCenter Domain

Virtual Switch Name: Lab-VirtualSwitch

Virtual Switch: VMware vSphere Distributed Switch Cisco AVS Cisco AVE

Associated Attachable Entity Profile: Lab-ApplicationAttachableAccessEn

Delimiter:

Enable Tag Collection:

Access Mode: Read Only Mode Read Write Mode

Endpoint Retention Time (seconds): 0

VLAN Pool: select an option

Security Domains:

Name	Description
------	-------------

- A. enable tag collection
- B. security domains
- C. delimiter
- D. virtual switch name

Answer: C

Explanation:

Step 8 Configuring the delimiter during VMM domain creation, perform the following actions:

On the menu bar, choose VM NETWORKING > Inventory

In the Navigation pane, right-click VMware and click Create vCenter Domain.

In the Create vCenter Domain dialog box, enter a Name.

Optional: In the Delimiter field, enter one of the following: |, ~, !, @,
