NEW QUESTION # 89
A cloud engineer needs to deploy a new version of a web application to 100 servers. In the past, new version deployments have caused outages. Which of the following deployment types should the cloud engineer implement to prevent the outages from happening this time?

- A. Blue-green
- B. Canary
- C. Rolling
- D. Round-robin

Answer: B

Explanation:
A canary deployment is a pattern that reduces the risk of introducing a new software version in production by slowly rolling out the change to a small subset of users before rolling it out to the entire infrastructure. It's an effective strategy to prevent outages since it

allows for monitoring and quick rollback if issues arise without affecting all users.
