All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the FCSS\_LED\_AR-7.6 exam, our experts keep their eyes focusing on it. Our FCSS\_LED\_AR-7.6 practice materials are updating according to the precise of the real exam. Our test prep can help you to conquer all difficulties you may encounter. In other words, we will be your best helper.

The PDF version of our FCSS\_LED\_AR-7.6 practice guide is convenient for reading and supports the printing of our study materials. If client uses the PDF version of FCSS\_LED\_AR-7.6 learning questions they can download the demos freely. If clients feel good after trying out our demos they will choose the full version of FCSS\_LED\_AR-7.6 training test bank to learn our study materials. The PDF version of our FCSS\_LED\_AR-7.6 study materials can be printed into paper documents and convenient for the client to take notes.

## Free PDF Fortinet - Pass-Sure FCSS\_LED\_AR-7.6 - FCSS - LAN Edge 7.6 Architect Valid Test Pattern

It is a universally accepted fact that the FCSS\_LED\_AR-7.6 exam is a tough nut to crack for the majority of candidates, but there are still a lot of people in this field who long to gain the related certification so that a lot of people want to try their best to meet the challenge of the FCSS\_LED\_AR-7.6 Exam. A growing number of people know that if they have the chance to pass the exam, they

will change their present situation and get a more decent job in the near future.

## Fortinet FCSS\_LED\_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Monitoring and Troubleshooting: This section covers configuring quarantine mechanisms, managing FortiAIOPS, troubleshooting FortiGate communication with FortiSwitch and FortiAP, and using monitoring tools for wireless connectivity.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Zero-Trust LAN Access: This domain covers machine authentication, MAC Authentication Bypass, NAC policies for wireless security, guest portal deployment, and advanced solutions like FortiLink NAC, dynamic VLAN, and VLAN pooling.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Authentication: This domain covers advanced user authentication using RADIUS and LDAP, two-factor authentication with digital certificates, and configuring syslog and RADIUS single sign-on on FortiAuthenticator.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Central Management: This section addresses managing FortiSwitch via FortiManager over FortiLink, implementing zero-touch provisioning, configuring VLANs, ports, and trunks, and setting up FortiExtender and FortiAP devices.</li></ul>

## Fortinet FCSS - LAN Edge 7.6 Architect Sample Questions (Q88-Q93):

### NEW QUESTION # 88

You've configured the FortiLink interface, and the DHCP server is enabled by default. The resulting DHCP server settings are shown in the exhibit. What is the role of the vci-string setting in this configuration?

```
config system dhcp server
  edit 1
    set ntp-service local
    set default-gateway 169.254.1.1
    set netmask 255.255.255.0
    set interface "fortilink"
    config ip-range
      edit 1
        set start-ip 169.254.1.2
        set end-ip 169.254.1.254
      next
    end
    set vci-match enable
    set vci-string "FortiSwitch" "FortiExtender"
  next
end
```

- A. To ignore DHCP requests coming from FortiSwitch and FortiExtender devices.
- B. To connect, devices must match the VCI string; otherwise, they will not receive an IP address.**
- C. To restrict the IP address assignment to devices that have FortiSwitch or FortiExtender as their hostname.
- D. To reserve IP addresses for FortiSwitch and FortiExtender devices.

**Answer: B**

Explanation:

The DHCP configuration shows:

```
set vci-match enable
```

```
set vci-string "FortiSwitch" "FortiExtender"
```

What this means

VCI = Vendor Class Identifier (DHCP option 60)

When vci-match is enabled, the DHCP server will only respond to DHCP requests from clients whose VCI string matches the configured vendor identifiers.

FortiSwitch and FortiExtender both send DHCP option 60 with:

```
"FortiSwitch"
```

"FortiExtender"

This is used in FortiLink deployments so only these devices receive IP addresses on the FortiLink network.

### NEW QUESTION # 89

Connectivity tests are being performed on a newly configured VLAN. The VLAN is configured on a FortiSwitch device that is managed by FortiGate. During testing, it is observed that devices within the VLAN can successfully ping FortiGate, and FortiGate can also ping these devices.

Inter-VLAN communication is working as expected. However, devices within the same VLAN are unable to communicate with each other.

What could be causing this issue?

- **A. Access VLAN is enabled on the VLAN.**
- B. The native VLAN configured on the ports is incorrect.
- C. The FortiSwitch MAC address table is missing entries.
- D. The FortiGate ARP table is missing entries.

**Answer: A**

Explanation:

Observed behavior:

- \* Devices in the VLAN can ping FortiGate # gateway reachability OK.
- \* FortiGate can ping devices in that VLAN # return path OK.
- \* Inter-VLAN routing works # FortiGate's L3 and policies are fine.
- \* Devices in the same VLAN cannot ping each other # problem is on the L2 switching plane, not L3.

On FortiSwitch (managed by FortiGate), there is a feature called Access VLAN (sometimes described in NAC /dynamic segmentation context):

- \* When Access VLAN is enabled on a VLAN, the switch does not perform normal L2 forwarding between hosts in that VLAN.
- \* Instead, all traffic from endpoints in that VLAN is forced upstream to FortiGate, as if every frame were destined for the gateway.
- \* This is used for designs where you want all intra-VLAN traffic inspected by the firewall, implementing micro-segmentation.

Resulting behavior:

- \* Host # FortiGate: works (frames are forwarded to FortiGate).
- \* FortiGate # Host: works (routed back).
- \* Host A # Host B (same VLAN):
- \* Frame from A goes to FortiGate.
- \* FortiGate sees source and destination in same subnet; depending on policy, it may drop or not have a policy allowing that traffic.
- \* Even if allowed, certain designs still break pure L2 expectations.

In the exam scenario, the key point is:

If Access VLAN is enabled, local L2 communication within that VLAN is disabled, so hosts in the same VLAN cannot communicate directly.

That perfectly explains:

- \* Same VLAN hosts can't ping each other
- \* But they can both reach FortiGate and beyond

Why the other options are less likely / incorrect

- \* B. FortiSwitch MAC address table is missing entries
- \* If MAC table were empty/bad, nothing in that VLAN would work properly, including pinging FortiGate.
- \* C. FortiGate ARP table is missing entries
- \* Then FortiGate couldn't ping the devices either; but it can.
- \* D. Native VLAN misconfigured on ports
- \* That would affect connectivity to FortiGate too, not only host-to-host.

### NEW QUESTION # 90

What is the primary requirement for FortiManager to manage a FortiSwitch via FortiGate using FortiLink?

Response:

- A. FortiLink must be in trunk mode
- B. FortiGate must be in transparent mode
- C. FortiSwitch must have a static IP
- **D. FortiGate must be managed by FortiManager**

**Answer: D**

### NEW QUESTION # 91

You need to deploy a security policy on a FortiSwitch port connected to legacy printers that do not support 802.1X authentication. How can you configure the network to ensure these printers have access while maintaining security?

- A. Use port mirroring to copy traffic from the printer to another secured port for authentication.
- B. Configure the FortiSwitch port to operate in promiscuous mode.
- C. **Enable MAC Authentication Bypass (MAB) on the FortiSwitch port.**
- D. Assign the printers to a high-priority VLAN that bypasses security policies.

**Answer: C**

Explanation:

When connecting non-802.1X-capable devices (like legacy printers, IP phones, or IoT devices) to a FortiSwitch managed by a FortiGate or FortiAuthenticator, you can still maintain network security by using MAC Authentication Bypass (MAB).

### NEW QUESTION # 92

What is the primary function of a captive portal in guest Wi-Fi onboarding?

Response:

- A. Automatically redirect traffic to DNS
- B. Force client to use VPN
- C. **Allow access only after user authentication or acceptance**
- D. Encrypt all packets using SSL

**Answer: C**
