## Valid Valid JN0-481 Exam Simulator - How to Prepare for Juniper JN0-481: Data Center, Specialist (JNCIS-DC)

Itcerttest's Juniper JN0-481 exam questions pdf is formed in a proper way that gives candidates the necessary asthenic unformatted data required to pass the Juniper exam. The study materials highlight a few basic and important questions that are repeatedly seen in past Juniper exam paper sheets. The Juniper JN0-481 Practice Questions are easy to access and can be downloaded anytime on your mobile, laptop, or MacBook.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q70-Q75):

**NEW QUESTION # 70**
A member of your organization made changes to a predefined interface map using Juniper Apstra. Which two statements are correct in this scenario? (Choose two.)

- A. Changes made to predefined interface maps will not have an impact on the Apstra software.
- B. Any changes made to predefined interface maps are discarded when Apstra is upgraded.
- C. Changes to interface maps in the global catalog will raise anomalies that may need to be addressed at the next commit.
- D. Changes to interface maps in the global catalog do not affect interface maps that have already been imported into blueprint catalogs

**Answer: B,D**

Explanation:
An interface map is a configuration template that maps interfaces between logical devices and physical hardware devices (represented with device profiles) while adhering to vendor specifications. An interface map can be either predefined or custom. A predefined interface map is one that ships with Apstra software and supports most qualified Juniper devices. A custom interface map is one that is created by the user to meet specific requirements. An interface map can be stored in either the global catalog or the

blueprint catalog. The global catalog contains all the interface maps that are available for use in any blueprint. The blueprint catalog contains the interface maps that are imported from the global catalog and used in a specific blueprint.

**NEW QUESTION # 71**

You connect two single-homed servers using Juniper Apstra as shown in the exhibit. You are using the ERB design blueprint with two virtual networks in a common routing zone. In this scenario, which two types of VXLAN tunnels will be automatically created by the EVPN control plane? (Choose two.)

- A. EVPN signaled route Type-8 VXLAN tunnels
- B. EVPN signaled route Type-3 VXLAN tunnels
- C. EVPN signaled route Type-2 VXLAN tunnels
- D. EVPN signaled route Type-6 VXLAN tunnels

**Answer: B,C**

Explanation:
EVPN route Type-3 is used to advertise the IP address of the VTEP and the VNIs that it supports.
This allows the VTEPs to discover each other and form VXLAN tunnels for the VNIs that they have in common. EVPN route Type-2 is used to advertise the MAC and IP addresses of the hosts connected to the VTEPs. This allows the VTEPs to learn the MAC-to-IP bindings and the MAC-to- VTEP mappings for the hosts in the same VNI. Therefore, these two types of VXLAN tunnels will be automatically created by the EVPN control plane when using Juniper Apstra with the ERB design blueprint and two virtual networks in a common routing zone.

**NEW QUESTION # 72**

How does Apstra use Fabric Device Management to ensure consistency across the network?

- A. By adjusting the color-coding of cables in the data center
- B. By enforcing uniform configurations on all network devices
- C. By randomly assigning system IDs to devices
- D. By assigning different agents to devices based on their location

**Answer: B**

**NEW QUESTION # 73**

You are installing a Juniper Apstra server in your data center. You have multiple users that will be expected to configure, manage, and carry out operational tasks in your data center. You have decided to implement remote user authentication for the role-based access control of your Apstra server. In this scenario, which three methods are supported? (Choose three.)

- A. Auth0
- B. TACACS+
- C. RADIUS
- D. LDAP
- E. SAML

**Answer: B,C,D**

Explanation:
To implement remote user authentication for the role-based access control of your Apstra server, you can use one of the following methods: TACACS+, LDAP, or RADIUS. These are the protocols that Juniper Apstra supports to authenticate and authorize users based on roles assigned to individual users within an enterprise. You can configure the Apstra server to use one or more of these protocols as the authentication sources and specify the order of preference. You can also configure the Apstra server to use local user accounts as a fallback option if the remote authentication fails.

**NEW QUESTION # 74**

Which fabric type should be chosen in a template to create a five-stage Clos?

- A. circuit switched
- B. rack-based
- C. pod-based
- D. collapsed

**Answer: C**

Explanation:
A five-stage Clos architecture allows for large-scale topologies with an additional aggregation layer that interconnects multiple pods into a single fabric. A pod is a group of racks that share the same spine devices. A rack is a group of leaf devices that connect to the same servers. To create a five-stage Clos network using Juniper Apstra, you need to choose the pod-based fabric type in the template creation wizard. This will allow you to specify the number of pods, planes, spines, and leaves for your network design.

**NEW QUESTION # 75**

......

simulation tests of our JN0-481 learning materials have the functions of timing and mocking exams, which will allow you to adapt to the exam environment in advance and it will be of great benefit for subsequent exams. After you complete the learning task, the system of our JN0-481 test prep will generate statistical reports based on your performance so that you can identify your weaknesses and conduct targeted training and develop your own learning plan. For the complex part of our JN0-481 Exam Question, you may be too cumbersome, but our system has explained and analyzed this according to the actual situation to eliminate your doubts and make you learn better.
