

# Free PDF Quiz Professional-Cloud-Architect - Google Certified Professional - Cloud Architect (GCP)–Efficient Test Cram

BONUS!!! Download part of ExamsTorrent Professional-Cloud-Architect dumps for free: <https://drive.google.com/open?id=1BvtODimYQHFB111-BuqDRS1nPZ8bBKIX>

Whereas the Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) PDF dumps file offered by the ExamsTorrent is simply a collection of real Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam questions that prepare you quickly for the final Professional-Cloud-Architect certification exam. Choose the right ExamsTorrent Professional-Cloud-Architect Exam Questions formats and start this journey as soon as possible and become a certified Google Professional-Cloud-Architect exam expert. Best of luck in exams and career!!

Earning the Google Professional-Cloud-Architect Certification is an excellent way to demonstrate your expertise and differentiate yourself in a competitive job market. Google Certified Professional - Cloud Architect (GCP) certification is recognized globally and can help you secure high-paying jobs in cloud architecture and related fields. If you are a cloud professional looking to advance your career, the GCP certification is a great investment in your future.

## Certification Professional-Cloud-Architect Exam Dumps, Test Professional-Cloud-Architect Simulator

The Professional-Cloud-Architect PDF file contains the real, valid, and updated Google Professional-Cloud-Architect exam practice questions. These are the real Professional-Cloud-Architect exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The Professional-Cloud-Architect PDF Questions file is easy to use and install. You can use the Professional-Cloud-Architect PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start Professional-Cloud-Architect exam preparation right now.

## Google Certified Professional - Cloud Architect (GCP) Sample Questions

## (Q29-Q34):

### NEW QUESTION # 29

Case Study: 7 - Mountkirk Games

Company Overview

Mountkirk Games makes online, session-based, multiplayer games for mobile platforms. They build all of their games using some server-side integration. Historically, they have used cloud providers to lease physical servers.

Due to the unexpected popularity of some of their games, they have had problems scaling their global audience, application servers, MySQL databases, and analytics tools.

Their current model is to write game statistics to files and send them through an ETL tool that loads them into a centralized MySQL database for reporting.

Solution Concept

Mountkirk Games is building a new game, which they expect to be very popular. They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics, and take advantage of its autoscaling server environment and integrate with a managed NoSQL database.

Business Requirements

Increase to a global footprint.

- \* Improve uptime - downtime is loss of players.
- \* Increase efficiency of the cloud resources we use.
- \* Reduce latency to all customers.

\* Technical Requirements

Requirements for Game Backend Platform

Dynamically scale up or down based on game activity.

- \* Connect to a transactional database service to manage user profiles and game state.
- \* Store game activity in a timeseries database service for future analysis.
- \* As the system scales, ensure that data is not lost due to processing backlogs.
- \* Run hardened Linux distro.

\* Requirements for Game Analytics Platform

Dynamically scale up or down based on game activity

- \* Process incoming data on the fly directly from the game servers
- \* Process data that arrives late because of slow mobile networks
- \* Allow queries to access at least 10 TB of historical data
- \* Process files that are regularly uploaded by users' mobile devices

\* Executive Statement

Our last successful game did not scale well with our previous cloud provider, resulting in lower user adoption and affecting the game's reputation. Our investors want more key performance indicators (KPIs) to evaluate the speed and stability of the game, as well as other metrics that provide deeper insight into usage patterns so we can adapt the game to target users.

Additionally, our current technology stack cannot provide the scale we need, so we want to replace MySQL and move to an environment that provides autoscaling, low latency load balancing, and frees us up from managing physical servers.

For this question, refer to the Mountkirk Games case study. Which managed storage option meets Mountkirk's technical requirement for storing game activity in a time series database service?

- A. Cloud Spanner
- B. Cloud Datastore
- C. BigQuery
- **D. Cloud Bigtable**

**Answer: D**

### NEW QUESTION # 30

You deploy your custom Java application to Google App Engine. It fails to deploy and gives you the following stack trace.

java.lang.SecurityException: SHA1 digest error for  
com/Altostrat/CloakedServlet.class  
    at com.google.appengine.runtime.Request.process  
-d36f818a24b8cf1d (Request.java)  
    at  
sun.security.util.ManifestEntryVerifier.verify  
(ManifestEntryVerifier.java:210)  
    at java.util.jar.JarVerifier.processEntry  
(JarVerifier.java:218)  
    at java.util.jar.JarVerifier.update  
(JarVerifier.java:205)  
    at  
java.util.jar.JarVerifiersVerifierStream.read  
(JarVerifier.java:428)  
    at sun.misc.Resource.getBytes  
(Resource.java:124)  
    at java.net.URL.ClassLoader.defineClass  
(URLClassLoader.java:273)  
    at sun.reflect.GeneratedMethodAccessor5.invoke  
(Unknown Source)  
    at  
sun.reflect.DelegatingMethodAccessorImpl.invoke  
(DelegatingMethodAccessorImpl.java:43)  
    at java.lang.reflect.Method.invoke  
(Method.java:616)  
    at java.lang.ClassLoader.loadClass  
(ClassLoader.java:266)

What should you do?

- A. Upload missing JAR files and redeploy your application.
- B. Digitally sign all of your JAR files and redeploy your application
- C. Recompile the CLoakedServlet class using and MD5 hash instead of SHA1

**Answer: B**

#### NEW QUESTION # 31

You are developing an application using different microservices that should remain internal to the cluster. You want to be able to configure each microservice with a specific number of replicas. You also want to be able to address a specific microservice from any other microservice in a uniform way, regardless of the number of replicas the microservice scales to. You need to implement this solution on Google Kubernetes Engine. What should you do?

- A. Deploy each microservice as a Pod. Expose the Pod in the cluster using an Ingress, and use the Ingress IP address name to address the Pod from other microservices within the cluster.
- B. Deploy each microservice as a Pod. Expose the Pod in the cluster using a Service, and use the Service DNS name to address the microservice from other microservices within the cluster.
- **C. Deploy each microservice as a Deployment. Expose the Deployment in the cluster using a Service, and use the Service DNS name to address it from other microservices within the cluster.**
- D. Deploy each microservice as a Deployment. Expose the Deployment in the cluster using an Ingress, and use the Ingress IP address to address the Deployment from other microservices within the cluster.

**Answer: C**

Explanation:

### NEW QUESTION # 32

Your company creates rendering software which users can download from the company website. Your company has customers all over the world. You want to minimize latency for all your customers. You want to follow Google-recommended practices.

How should you store the files?

- A. Save the files in multiple Multi-Regional Cloud Storage buckets, one bucket per multi-region.
- B. Save the files in multiple Regional Cloud Storage buckets, one bucket per zone per region.
- **C. Save the files in a Regional Cloud Storage bucket, one bucket per zone of the region.**
- D. Save the files in a Multi-Regional Cloud Storage bucket.

**Answer: C**

### NEW QUESTION # 33

Your architecture calls for the centralized collection of all admin activity and VM system logs within your project.

How should you collect these logs from both VMs and services?

- A. Stackdriver automatically collects admin activity logs for most services. The Stackdriver Logging agent must be installed on each instance to collect system logs.
- B. All admin and VM system logs are automatically collected by Stackdriver.
- C. Launch a custom syslogd compute instance and configure your GCP project and VMs to forward all logs to it.
- **D. Install the Stackdriver Logging agent on a single compute instance and let it collect all audit and access logs for your environment.**

**Answer: D**

Explanation:

<https://cloud.google.com/logging/docs/agent/>

### NEW QUESTION # 34

.....

You can adjust the speed and keep vigilant by setting a timer for the simulation test. At the same time online version of Professional-Cloud-Architect test preps also provides online error correction— through the statistical reporting function, it will help you find the weak links and deal with them. Of course, you can also choose two other versions. The contents of the three different versions of Professional-Cloud-Architect learn torrent is the same and all of them are not limited to the number of people/devices used at the same time.
