### NEW QUESTION # 41

A Citrix Administrator executed the following command in the Global Server Load Balancing (GSLB) environment:  
set gslb site SiteB -triggerMonitor MEPDOWN

- **A. The service monitor is invoked only when Metric Exchange Protocol (MEP) has marked the service as DOWN for any reason.**
- B. The service monitor will take precedence over Metric Exchange Protocol (MEP)
- C. The state of the GSLB service will always be controlled by Metric Exchange Protocol (MEP).
- D. The service monitor is invoked only when Metric Exchange Protocol (MEP) connectivity has been lost between SiteA and SiteB.

**Answer: A**

Explanation:

The triggerMonitor parameter specifies the conditions under which the service monitor is invoked.

The possible values are:

ALWAYS: The service monitor is always invoked.

MEPDOWN: The service monitor is invoked only when Metric Exchange Protocol (MEP) has marked the service as DOWN for any reason.

MEPSUSPECT: The service monitor is invoked only when MEP has marked the service as SUSPECT.
