Our SOL-C01 exam materials are formally designed for the exam. With its help, you don't have to worry about the exam any more for it almost guarantees you get what you want. If you think I'm exaggerating, you might as well take a look at our SOL-C01 Actual Exam. With a high pass rate as 98% to 100%, you will be bound to pass the exam. And our SOL-C01 training questions are popular in the market. We believe you will make the right choice.

It is impossible for everyone to concentrate on one thing for a long time, because as time goes by, people's attention will gradually decrease. Our SOL-C01 study materials can teach users how to arrange their time. Experimental results show that we can only for a period of time to keep the spirit high concentration, in reaction to the phenomenon, our SOL-C01 Study Materials are arranged for the user reasonable learning time, allow the user to try to avoid long time continuous use of our products, so that we can better let users in the most concentrated attention to efficient learning.

Prominent Features of {Snowflake} Snowflake SOL-C01 Exam Questions

SureTorrent Snowflake SOL-C01 desktop practice exam software is usable on Windows computers without an active internet connection. It creates the complete scenario of the Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) real test through its multiple mock tests. Our practice software contains all the questions which you will encounter in the Snowflake final test.

Snowflake SOL-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Data Protection and Data Sharing: This domain addresses continuous data protection through Time Travel and cloning, plus data collaboration capabilities via Snowflake Marketplace and private Data Exchange sharing.

Topic 2	<ul style="list-style-type: none"> • Identity and Data Access Management: This domain focuses on Role-Based Access Control (RBAC) including role hierarchies and privileges, along with basic database administration tasks like creating objects, transferring ownership, and executing fundamental SQL commands.
Topic 3	<ul style="list-style-type: none"> • Data Loading and Virtual Warehouses: This domain covers loading structured, semi-structured, and unstructured data using stages and various methods, virtual warehouse configurations and scaling strategies, and Snowflake Cortex LLM functions for AI-powered operations.
Topic 4	<ul style="list-style-type: none"> • Interacting with Snowflake and the Architecture: This domain covers Snowflake's elastic architecture, key user interfaces like Snowsight and Notebooks, and the object hierarchy including databases, schemas, tables, and views with practical navigation and code execution skills.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q172-Q177):

NEW QUESTION # 172

Which of the following system-defined roles exist in Snowflake? (Choose any 3 options)

- A. ACCOUNTADMIN
- B. SECURITYADMIN
- C. DATABASEADMIN
- D. SYSADMIN

Answer: A,B,D

Explanation:

Snowflake provides a predefined set of system-defined roles that enforce Role-Based Access Control (RBAC).

These roles ensure structured governance and centralized privilege management across accounts. The primary system-defined roles include:

ACCOUNTADMIN, the highest-privileged role, responsible for global account-level activities such as billing, governance, replication, and cross-region/cloud configuration. It has implicit ownership of all objects.

SECURITYADMIN manages users, roles, MFA, and all privilege grants. This role ensures operational control over user lifecycle management while supporting separation of duties from ACCOUNTADMIN.

SYSADMIN manages objects such as databases, schemas, tables, warehouses, and other compute objects. It is the default role for data engineering and data platform teams needing full control of object creation and maintenance.

DATABASEADMIN does not exist as a system-defined role—it is typically user-created for customization.

System roles form a foundational security model for controlled privilege escalation and governance.

NEW QUESTION # 173

What command can be used to load data from an external stage to a table?

- A. GET
- B. PUT
- C. COPY INTO
- D. INSERT INTO

Answer: C

Explanation:

The COPY INTO command is Snowflake's primary bulk-loading mechanism for ingesting data from stages (internal or external) into tables. It can read from Amazon S3, Azure Blob Storage, Google Cloud Storage, or internal Snowflake stages. COPY INTO supports file formats (CSV, JSON, Parquet), pattern matching, error handling, transformations, and validation modes.

PUT uploads files from a local machine to an internal stage—not from stage to table.

GET downloads files from an internal stage to a local system.

INSERT INTO is for row-by-row inserts and is not designed for large file ingestion.

Therefore, COPY INTO is the correct and recommended method for loading stage files into Snowflake tables.

NEW QUESTION # 174

A table 'CUSTOMER DATA' exists within the 'PUBLIC' schema of the database 'CUSTOMER DB'. The table contains a column named 'CUSTOMER ID'. You need to create a sequence named 'CUSTOMER SEQ' and configure it to automatically increment by 10 for each new customer inserted into the 'CUSTOMER DATA' table. The sequence should start at 1000 and cycle back to the beginning after reaching 2000. What is the correct SQL statement to create and configure this sequence?

- A. CREATE SEQUENCE CUSTOMER SEQ START WITH 1000 INCREMENT BY 10 CYCLE;
- B. CREATE SEQUENCE CUSTOMER SEQ START WITH 1000 INCREMENT BY 10 MINVALUE 1000 MAXVALUE 2000;
- C. CREATE SEQUENCE CUSTOMER SEQ START WITH 1000 INCREMENT BY 10 MAXVALUE 2000;
- **D. CREATE SEQUENCE CUSTOMER SEQ START WITH 1000 INCREMENT BY 10 MAXVALUE 2000 CYCLE;**
- E. CREATE SEQUENCE CUSTOMER SEQ START WITH 1000 INCREMENT BY 10 MAXVALUE 2000 NO CYCLE;

Answer: D

Explanation:

The correct SQL statement is 'CREATE SEQUENCE CUSTOMER_SEQ START WITH 1000 INCREMENT BY 10 MAXVALUE 2000 CYCLE;'. This statement creates a sequence named 'CUSTOMER SEQ', starts it at 1000, increments it by 10 for each new value, sets the maximum value to 2000, and specifies that the sequence should cycle back to the beginning (the MINVALUE, which defaults to the starting value) after reaching the maximum value. Without 'CYCLE', the sequence stops at the maximum value. Defining MINVALUE is unnecessary when CYCLE is used, as the sequence automatically restarts at the starting value.

NEW QUESTION # 175

You are tasked with transferring ownership of a database named 'FINANCIAL DATA' from the 'ACCOUNTADMIN' role to a custom role named 'DATA GOVERNANCE'. After the transfer, the 'DATA GOVERNANCE' role should have full control over the database. Which of the following steps must be performed to ensure a successful ownership transfer?

- A. Grant the 'OWNERSHIP' privilege on the database to the 'DATA_GOVERNANCE' role using 'GRANT OWNERSHIP ON DATABASE FINANCIAL_DATA TO _GOVERNANCE\$. The user executing this command must have the 'ACCOUNTADMIN' role, and the 'DATA_GOVERNANCE' role must already have ROLE DATA the 'USAGE' privilege on the database and all schemas within it.
- **B. Grant the 'OWNERSHIP' privilege on the database to the 'DATA_GOVERNANCE' role using 'GRANT OWNERSHIP ON DATABASE FINANCIAL_DATA TO ROLE DATA_GOVERNANCE;' and ensure the role is active. No additional privileges are required.**
- C. Execute the command: 'GRANT OWNERSHIP ON DATABASE FINANCIAL DATA TO ROLE DATA GOVERNANCE;'
- D. Grant the 'OWNERSHIP' privilege on the database to the 'DATA_GOVERNANCE' role using 'GRANT OWNERSHIP ON DATABASE FINANCIAL_DATA TO ROLE DATA GOVERNANCE\$. The DATA GOVERNANCE role must be the current role for the user performing the operation.
- E. Grant the 'OWNERSHIP' privilege on the database to the 'DATA_GOVERNANCE' role using 'GRANT OWNERSHIP ON DATABASE FINANCIAL_DATA TO ROLE DATA GOVERNANCE\$. Then, explicitly grant all other required privileges (e.g., USAGE, CREATE) on the database to the 'DATA GOVERNANCE' role.

Answer: B

Explanation:

The 'GRANT OWNERSHIP' command automatically revokes the OWNERSHIP privilege from the previous owner and grants it to the new owner. The user executing must have the necessary privileges to grant OWNERSHIP. The role receiving ownership needs no special privileges beforehand, as it is gaining complete control. Option C suggests 'USAGE' privilege must be granted beforehand, which is not necessarily needed to transfer Ownership. Option D implies other privileges must be explicitly granted but 'OWNERSHIP' already grants all permissions.

Option E requires that the DATA_GOVERNANCE role must be current role for user which is unnecessary.

NEW QUESTION # 176

Which SQL command is commonly used to load structured data from a stage into a Snowflake table?

- A. LOAD DATA
- **B. COPY INTO**
- C. IMPORT DATA
- D. INSERT INTO

Answer: B

Explanation:

The COPY INTO <table> command is Snowflake's primary and optimized mechanism for loading large volumes of structured data from either internal or external stages. Unlike INSERT INTO, which is used for row-level inserts or small datasets, COPY INTO is designed for high-throughput operations, parallel loading, and performant ingestion from files stored in S3, Azure Blob Storage, GCS, or Snowflake-managed stages.

The COPY INTO command supports detailed file formatting options (such as TYPE=CSV, FIELD_DELIMITER, SKIP_HEADER), error-handling rules (ON_ERROR), and transformations using SQL expressions inside the COPY statement. Snowflake does not support LOAD DATA or IMPORT DATA as SQL commands; these exist in other database systems but not within Snowflake. COPY INTO ensures efficient, resilient, fault-tolerant data ingestion and is heavily used for ETL/ELT, data lake ingestion, and large batch ingestion pipelines.
