SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q51-Q56):

NEW QUESTION # 51

Your story takes a long time to open. What could cause this? Note: There are 3 correct answers to this question.

- A. Many story filters
- B. Many data sources
- C. Many hyperlinks
- D. Complex formatting
- E. Large calculation scope

Answer: A,B,D

NEW QUESTION # 52

What is required to use version management in a story?

- A. Optimized mode
- B. Classic mode
- C. Planning model
- D. Analytic model

Answer: C

Explanation:

Reference:

SAP Analytics Cloud Help Documentation: Version Management in Planning

SAP Analytics Cloud User Guide: Using Planning Models for Versioning

NEW QUESTION # 53

What are the available connection types in SAP Analytics Cloud? Note: There are 2 correct answers to this question.

- A. On-premise
- B. Import
- C. Cloud
- D. Live

Answer: B,D

Explanation:

SAP Analytics Cloud supports two primary types of data connections: Live Data Connection and Import Data Connection. Live Data Connection establishes a direct link to the data source, allowing real-time data access without replicating the data into SAP Analytics Cloud. This is ideal for scenarios where up-to-the-minute data is crucial, and data volume is large. On the other hand, Import Data Connection involves copying data from the source into SAP Analytics Cloud, which is suitable for scenarios where data doesn't change frequently, or there's a need for data transformation and enrichment within SAP Analytics Cloud.

NEW QUESTION # 54

You have a dimension with members for product groups and products. Each product group has associated products. You want to plan by product group without disaggregating into the products. How can you do this?

- A. Use two hierarchies
- B. Dis-able allocations
- C. Dis-able distribution
- D. Use two properties

Answer: A

Explanation:

When you have a dimension with members for product groups and associated products and want to plan by product group without disaggregating into the individual products, using two hierarchies is the best approach. One hierarchy can represent the product groups at a higher level, allowing for planning and analysis at the group level. The second hierarchy can include both the product

groups and their associated individual products for more detailed analysis when needed. This approach provides flexibility in planning and analyzing data at different levels of detail without the necessity of disaggregating data at the product group level.

SAP Analytics Cloud Help Documentation: Hierarchies in Planning

SAP Analytics Cloud User Guide: Managing Hierarchies for Planning

NEW QUESTION # 55

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- A. Schedule the import
- B. Refresh the import job
- C. Refresh the story
- D. Allow model import

Answer: A,C

Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

NEW QUESTION # 56

.....

Our C-SAC-2501 guide torrent provides 3 versions and they include PDF version, PC version, APP online version. Each version boosts their strength and using method. For example, the PC version of SAP Certified Associate - Data Analyst - SAP Analytics Cloud test torrent is suitable for the computers with the Window system.
