Salesforce Certified Industries CPQ Developer Sample Questions (Q183-Q188):

NEW QUESTION # 183

When creating a pricing adjustment, what should a developer do to make sure that the user can understand why the price has been adjusted?

- A. Include help text for the pricing adjustment
- **B. Include display text for the pricing adjustment**
- C. Use a dear name for the pricing adjustment
- D. Include a configuration message for the pricing adjustment

Answer: B

Explanation:

When creating a pricing adjustment in Salesforce Industries CPQ, to ensure users understand why the price has been adjusted, a developer should: D. Include display text for the pricing adjustment: This ensures that whenever a pricing adjustment is applied, there is clear, descriptive text explaining the reason for the adjustment. This text is displayed to the user, providing transparency and clarity about the changes to the pricing.

Providing clear display text helps prevent confusion and improves customer satisfaction by making pricing dynamics transparent and understandable.

NEW QUESTION # 184

Vlocity Product Console does not support the creation of custom EPC objects.

- **A. False**
- B. True

Answer: A

Explanation:

The statement that the Vlocity Product Console does not support the creation of custom EPC (Enterprise Product Catalog) objects is false. The Vlocity Product Console allows administrators and developers to create and manage custom objects within the EPC. This flexibility is essential for tailoring the product catalog to meet specific business requirements and integrating with other processes in Salesforce Industries CPQ.

NEW QUESTION # 185

Product cardinality can be used to configure which two use case?

Choose 2 answers

- A. Product is discounted based on the quantity
- **B. Product has a default quantity of 2**
- **C. An optional product in a product bundle**
- D. Product is not available to customers in France

Answer: B,C

Explanation:

Product cardinality settings in Salesforce Industries CPQ can manage the following use cases: A. Product has a default quantity of 2: Cardinality can be set to specify a default number of products (default cardinality) when added to a cart or bundle, guiding the initial quantity set during the configuration. B. An optional product in a product bundle: Minimum cardinality can be set to 0, allowing a product to be optional within a bundle. This means the product does not have to be selected but can be added by the customer if desired.

NEW QUESTION # 186

The Cart header shows a running total of purchases made by the customer.

- **A. True**
- B. False

Answer: A

Explanation:

In the Salesforce Industries CPQ environment, the cart header indeed displays a running total of purchases made by the customer. This feature is crucial for providing customers with real-time feedback on their selections and total expenditures as they configure products or services. It enhances transparency and helps customers make informed decisions about their purchases throughout the sales process.

NEW QUESTION # 187

How do you ensure that the persistent cart (vlcCart) is created in the correct node in the data JSON?

- A. Drag the vlcCart node under the vlcPersistentComponent parent node in the Json editor
- B. Check the Render property for the action that creates it
- C. Specify "vlcPersistentComponent" in the Response JSON Node properly
- D. Check the Show Persistent Cart property for the action that creates it

Answer: A

Explanation:

To ensure that the persistent cart (vlcCart) is correctly created and maintained in the data JSON structure in Salesforce Industries CPQ, it is crucial to organize the JSON nodes properly. By dragging the vlcCart node under the vlcPersistentComponent parent node in the JSON editor, you establish a correct hierarchical relationship in the JSON structure. This setup ensures that data related to the persistent cart is correctly encapsulated and managed within the overall data model, supporting consistent behavior and state management across user sessions.

NEW QUESTION # 188
