SAP C-C4H430-94퍼펙트 최신버전 문제 - C-C4H430-94높은 통과율 덤프문제

DumpTOP는 많은 분들이 SAP C-C4H430-94인증시험을 응시하여 성공하도록 도와주는 사이트입니다. DumpTOP의 C-C4H430-94덤프는 모두 엘리트한 전문가들이 만들어낸 만큼 시험문제의 적응률은 아주 높습니다. 거의 100%의 정확도를 자랑하고 있습니다. 아마 많은 유사한 사이트들도 많습니니다. 이러한 사이트에서 학습가이드와 온라인서비스도 지원되고 있습니다만 DumpTOP는 이미 이러한 C-C4H430-94 사이트를 뛰어넘은 실력으로 업계에서 우리만의 이미지를 지키고 있습니다. DumpTOP는 정확한 문제와 답만 제공하고 또한 그 어느 사이트보다도 빠른 업데이트로 여러분의 인증시험을 안전하게 패스하도록 합니다.

CRISC인기자격증 인증시험자료 시험준비에 가장 좋은 인기시험 기출문제

KoreaDumps에서는 ISACA 인증 CRISC 시험대비덤프를 발췌하여 제공해드립니다. ISACA 인증 CRISC 시험대비덤프에는 시험문제의 모든 예상문제와 시험유형이 포함되어있어 시험준비자료로서 가장 좋은 선택입니다.

KoreaDumps에서 제공해드리는 전면적인 ISACA 인증 CRISC 시험대비덤프로 ISACA 인증 CRISC 시험준비공부를 해보세요. 통과율이 100%입니다.

최신 Isaca Certificaton CRISC 무료샘플문제 (Q118-Q123):

질문 # 118

An organization is implementing internet of Things (IoT) technology to control temperature and lighting in its headquarters. Which of the following should be of GREATEST concern?

- A. Insufficient network isolation
- B. impact on network performance
- C. Lack of interoperability between sensors
- D. insecure data transmission protocols

정답: D

설명:

Insecure data transmission protocols should be of greatest concern when an organization is implementing internet of Things (IoT) technology to control temperature and lighting in its headquarters, because they can expose the IoT devices and data to unauthorized access, interception, or manipulation. Insecure data transmission protocols can also compromise the confidentiality, integrity, and availability of the IoT system and the information it collects and transmits. The other options are not the greatest concerns, although they may also pose some challenges or risks to the IoT implementation. Insufficient network isolation, impact on network performance, and lack of interoperability between sensors are examples of technical or operational issues that can affect the functionality, efficiency, or compatibility of the IoT system, but they do not have the same severity or impact as insecure data transmission protocols. 질문 # 119

Which of the following provides the MOST important information to facilitate a risk response decision?

- A. Industry best practices
- B. Risk appetite
- C. Audit findings

- D. Key risk indicators

정답: B

설명:

Risk appetite is the amount and type of risk that an enterprise is willing to accept in pursuit of its objectives.

Risk appetite provides the most important information to facilitate a risk response decision, as it defines the boundaries and expectations for the risk management process. Risk appetite helps to determine the acceptable level of variation around the objectives, and to prioritize and allocate resources for the risk responses. Risk appetite also helps to align the risk management program with the enterprise's strategy, culture, and values.

The other options are not as important as risk appetite, as they provide different types of information for the risk management process:

* Audit findings are the results of the independent and objective examination of the risk management program, such as by internal or external auditors. Audit findings provide assurance and feedback on the effectiveness and efficiency of the risk management program, and may identify gaps or weaknesses that need to be addressed. Audit findings may influence the risk response decision, but they are not as essential as risk appetite, as they are based on the existing or past performance of the risk management program, and may not reflect the future or potential risks or opportunities.

* Key risk indicators are the metrics that measure the changes in the level of risk exposure, such as by monitoring the risk drivers, triggers, or events. Key risk indicators provide information on the current or emerging risks, and may alert the enterprise to take action or adjust the risk response. Key risk indicators may influence the risk response decision, but they are not as essential as risk appetite, as they are based on the observed or estimated data or trends, and may not account for the uncertainties or complexities of the risks.

* Industry best practices are the methods or techniques that have been proven to be effective or efficient in managing risks, such as by benchmarking or adopting standards or frameworks. Industry best practices provide guidance and direction on how to implement the risk management program, and may improve the quality or consistency of the risk response. Industry best practices may influence the risk response decision, but they are not as essential as risk appetite, as they are based on the experiences or

* recommendations of other enterprises, and may not be suitable or applicable for the specific context or objectives of the enterprise. References = Risk and Information Systems Control Study Manual, 7th Edition, Chapter 1, Section 1.2.1.1, pp. 18-19.

질문 # 120

An organization learns of a new ransomware attack affecting organizations worldwide. Which of the following should be done FIRST to reduce the likelihood of infection from the attack?

- A. Confirm with the antivirus solution vendor whether the next update will detect the attack.
- **B. Identify systems that are vulnerable to being exploited by the attack.**
- C. Obtain approval for funding to purchase a cyber insurance plan.
- D. Verify the data backup process and confirm which backups are the most recent ones available.

정답: B

질문 # 121

From a risk management perspective, which of the following is the PRIMARY purpose of conducting a root cause analysis following an incident?

- A. To reduce incident response times defined in SLAs
- B. To ensure risk has been reduced to acceptable levels
- C. To satisfy senior management expectations for incident response
- **D. To minimize the likelihood of future occurrences**

정답: D

설명:

Root cause analysis helps identify the fundamental reason for an incident, allowing the enterprise to implement controls that reduce the probability of recurrence.
