EAEP2201證照指南，EAEP2201下載

您應該尋找那些真實可信的題庫商提供的EAEP2201題庫資料，這樣對您通過考試是更有利，可信度高的Esri EAEP2201題庫可幫助您快速通過認證考試，而NewDumps公司就是這樣值得您信賴的選擇。EAEP2201題庫資料中的每個問題都由我們專業人員檢查審核，為考生提供最高品質的考古題。如果您希望在短時間內獲得Esri EAEP2201認證，您將永遠找不到比NewDumps更好的產品了。

為了準備考試，候選人可以利用Esri的培訓課程、研討會和網絡研討會，以及練習測試和學習指南。通過EAEP2201考試是一個顯著的成就，表明個人在ArcGIS企業管理方面的專業知識和能力，可以帶來職業發展和新的工作機會。

EAEP2201 認證考試適用於 GIS 系統管理員、資料庫管理員、系統管理員和其他負責部署和維護 GIS 系統的 IT 專業人員，也適用於希望通過證明他們在 GIS 管理方面的專業知識來推進職業生涯的 GIS 分析師。

最新的 Technical Certification EAEP2201 免費考試真題 (Q39-Q44):

問題 #39

After upgrading, a GIS administrator tries to log in to Portal for ArcGIS using admin credentials. The portal site doesn't display correctly and an error is shown. Login fails.

What should the administrator do?

- A. Reinstall the ArcGIS Web Adaptor
- B. Roll back the upgrade

- C. Run portalscan.py
- D. Clear the browser's cache

答案： D

解題說明：

After an upgrade, Portal for ArcGIS often changes web elements, scripts, and cached content. If the browser is using old cached files, the portal page may not render correctly, and authentication may fail. Clearing the browser cache ensures that new files are loaded.

From Esri documentation:

"After upgrading ArcGIS Enterprise, clear the browser's cache to ensure that all updated components and scripts are loaded properly."

* Option A is a diagnostic tool, not a fix.

* Option B may be excessive if the issue is simply browser cache.

* Option D is not a standard troubleshooting step.

問題 #40

An ArcGIS analyst is curating a series of basemaps for field crews editing utility infrastructure in the field.

The analyst must ensure optimal performance.

Which type of service should be published?

- A. Cached map service
- B. Vector tile service
- C. Dynamic map service

答案： A

解題說明：

For field operations, Vector Tile Services are highly efficient and suitable for basemaps. They offer fast rendering, smaller file sizes, and are easily scalable across various devices, including those with limited bandwidth or processing capabilities. Vector tiles also support dynamic styling and are ideal for offline use, which is often necessary for field crews working in areas with limited connectivity.

Cached map services (Option A) are raster-based and can be larger in size, making them less optimal for mobile use. Dynamic map services (Option C) require real-time data rendering, which can be resource-intensive and may not perform well in field conditions with limited connectivity.

Reference Source: ArcGIS Enterprise documentation on customizing basemaps

問題 #41

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer.

The organization is concerned with the hosting server's available resources.

Which system resource should be closely monitored?

- A. Network utilization
- B. Disk activity
- C. CPU utilization

答案： C

解題說明：

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

問題 #42

A GIS analyst creates a layer in ArcGIS Pro that must be published to the ArcGIS Enterprise portal as a web service that supports editing. The analyst does not have a connection to the ArcGIS Server where the service must be published. What action should the analyst perform?

- A. Change the privileges on their user role to allow publishing
- **B. Create a service definition file to be published by a portal administrator**
- C. Upload the layer to the portal as a layer package file and add it to a web map

答案： B

解題說明：

When a direct connection to the ArcGIS Server is not available, the recommended approach is to create a service definition (.sd) file in ArcGIS Pro. This file encapsulates the map, its data, and the necessary configurations for publishing. The analyst can then provide this file to a portal administrator, who can publish it to the ArcGIS Enterprise portal, ensuring the service supports editing as required.

Changing user privileges (Option B) does not address the lack of server connection. Uploading a layer package (Option C) does not result in a web service that supports editing capabilities.

Reference Source: ArcGIS Pro documentation on publishing services using service definition files

問題 #43

A GIS administrator is architecting a new ArcGIS Enterprise deployment. The organization has grown and evolved since the initial deployment. The organization is having difficulty meeting the existing Service Level Agreement. Recently, the team rolled out a series of web tools that are used in various applications throughout the organization. In the existing deployment, users report poor performance when the web tools are used. Which action should the GIS administrator perform?

- **A. Dedicate an ArcGIS Server site for analysis to use workload separation**
- B. Install an additional ArcGIS Enterprise deployment for analysis workflows
- C. Configure additional ArcGIS Server machines within the existing ArcGIS Server site

答案： A

解題說明：

Workload separation is a best practice in ArcGIS Enterprise architecture. By dedicating a separate ArcGIS Server site for analysis tasks, such as geoprocessing services used in web tools, system resources can be managed more effectively, and performance can be improved. This configuration avoids overloading a single site and ensures that interactive web applications are not affected by resource-intensive analysis tools.

Adding more machines to the same site (Option A) does not isolate workloads and may still result in contention. Installing an entirely new ArcGIS Enterprise deployment (Option C) increases complexity and administration effort unnecessarily. The recommended solution is to implement a dedicated ArcGIS Server site for analysis as part of a federated multi-site deployment.
