Most Recent Nutanix NCP-US Questions For Effective Future Profession [2026]

If you want to constantly improve yourself and realize your value, if you are not satisfied with your current state of work, if you still spend a lot of time studying and waiting for NCP-US qualification examination, then you need our NCP-US material, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our NCP-US Study Materials have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our products have many advantages, I will introduce you to the main characteristics of our NCP-US research materials.

The NCP-US v6 exam is designed for IT professionals who are responsible for managing and administering Nutanix unified storage. NCP-US exam is intended for individuals who have experience in managing storage systems and have a working knowledge of storage protocols such as NFS, CIFS, iSCSI, and Fibre Channel.

Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q87-Q92):

NEW QUESTION # 87

An administrator is setting a Windows client to access a Volume Group (VG) served by a Nutanix cluster.

Which configuration items should the administrator take from the cluster? (Choose two.)

- A. The cluster's fully qualified domain name (FQDN)
- **B. The VG name**
- **C. The cluster's data services IP (DSIP)**
- D. The IPs of all cluster CVMs IP

Answer: B,C

NEW QUESTION # 88

During a recent audit, the auditors discovered several shares that were unencrypted. To remediate the audit item, the administrator enabled Encrypt SMB3 Messages on the accounting, finance, and facilities shares. After encryption was enabled, several users have reported that they are no longer able to access the shares.

What is causing this issue?

- **A. The users are accessing the shares from Linux desktops.**
- B. Advanced Encryption Standard 128 & 256 are disabled in Windows 7.
- C. The users are accessing the shares from Windows 8 desktops.
- D. Advanced Encryption Standard 128 & 256 are disabled in Linux or Mac OS.

Answer: A

Explanation:

According to Encryption-Files | Nutanix Community¹, SMB3 message encryption is a feature that encrypts messages on the file server side and decrypts them on the client side. However, clients that do not support encryption (Linux, Mac, windows 7) cannot access a share with encryption enabled.

According to Nutanix Support & Insights², Nutanix Files supports SMB3 encryption for SMB3 client-server traffic. This means that only clients that support SMB3 protocol can access encrypted shares.

Therefore, if the users are accessing the shares from Linux desktops, they will not be able to access them because Linux does not support SMB3 encryption.

NEW QUESTION # 89

An administrator successfully installed Objects and was able to create a bucket. When using the reference URL to access this Objects store, the administrator is unable to write data in the bucket when using an Active Directory account. Which action should the administrator take to resolve this issue?

- **A. Verify sharing policies at the bucket level.**
- B. Replace SSL Certificates at the Objects store level.
- C. Verify Access Keys for the user.
- D. Reset the Active Directory user password.

Answer: A

NEW QUESTION # 90

An administrator has deployed a new Files cluster within a Windows Environment.

After some days, the Files environment is not able to synchronize users with the Active Directory server anymore. The administrator observes a large time difference between the Files environment and the Active Directory Server that is responsible for the behavior. How should the administrator prevent the Files environment and the AD Server from having such a time difference in future?

- A. Connect to every FSVM and edit the time manually.
- **B. Use the same NTP Servers for the File environment and the AD Server.**
- C. Use 0.pool.ntp.org as the NTP Server for the Files environment.
- D. Use 0.pool.ntp.org as the NTP Server for the AD Server.

Answer: B

NEW QUESTION # 91

Refer to the exhibit:

...

```
192.168.5.1> get-smbclient configuration
ConnectionCountPerRssNetworkInterface: 4
DirectoryCacheEntriesMax: 16
DirectoryCacheEntrySizeMax: 65536
DirectoryCacheLifetime: 10
EnableBandwidthThrottling: True
EnableByteRangeLockingOnReadOnlyFiles: True
EnableLargeMtu: True
EnableMultiChannel: True
DormantFileLimit: 1023
EnableSecuritySignature: True
ExtendedSessionTimeout: 1000
EnableSecuritySignature: True
ExtendedSessionTimeout: 1000
FileInfoCacheEntriesMax: 64
FileInfoCacheLifetime: 10
FileNotFoundCacheEntriesMax: 128
FileNotFoundCacheLifetime: 5
KeepConn: 600
MaxCmds: 50
MaximumConnectionCountPerServer: 32
OplocksDisabled: False
RequireSecuritySignature: True
SessionTimeout: 60
UseOpportunisticLocking: True
WindowSizeThreshold: 1
...
```

An administrator is unable to browse a share and runs the 'get-smbclient configuration' command. What is a possible cause of the problem indicated by the 'RequireSecuritySignature' line?

- A. Kerberos is enabled
- B. CHAP is enabled
- C. TLS is enabled
- D. AD is enabled

Answer: A

NEW QUESTION # 92

.....
