NSE8_812 Exam Valid Exam Simulator- Updated Reliable NSE8_812 Exam Vce Pass Success

Pass4SureQuiz Fortinet NSE8_812 Exam Questions And Answers provide you test preparation information with everything you need. About Fortinet NSE8_812 exam, you can find these questions from different web sites or books, but the key is logical and connected. Our questions and answers will not only allow you effortlessly through the exam first time, but also can save your valuable time.

The NSE8_812 Exam covers a wide range of topics related to network security, including network design and topology, security protocols, VPN technologies, intrusion prevention, and web filtering. Candidates are required to have a deep understanding of these topics in order to pass the exam.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q19-Q24):

NEW QUESTION # 19

Refer to the exhibit.

The exhibit shows the forensics analysis of an event detected by the FortiEDR core In this scenario, which statement is correct regarding the threat?

- A. This is a ransomware attack and has been stopped by FortiEDR
- B. This is an exfiltration attack and has been stopped by FortiEDR.
- C. This is a ransomware attack and has not been stopped by FortiEDR.
- D. This is an exfiltration attack and has not been stopped by FortiEDR

Answer: C

NEW QUESTION # 20

Refer to the exhibits.

The exhibits show a FortiGate network topology and the output of the status of high availability on the FortiGate.
Given this information, which statement is correct?

- A. The cluster members are on the same network and the IP addresses were statically assigned.
- B. FGVMEVLQOG33WM3D and FGVMEVGCJNHFYI4A share a virtual MAC address.
- C. The cluster mode can support a maximum of four (4) FortiGate VMs
- D. The ethertype values of the HA packets are 0x8890, 0x8891, and 0x8892

Answer: B

Explanation:
The output of the status of high availability on the FortiGate shows that the cluster mode is active-passive, which means that only one FortiGate unit is active at a time, while the other unit is in standby mode. The active unit handles all traffic and also sends HA heartbeat packets to monitor the standby unit. The standby unit becomes active if it stops receiving heartbeat packets from the active unit, or if it receives a higher priority from another cluster unit. In active-passive mode, all cluster units share a virtual MAC address for each interface, which is used as the source MAC address for all packets forwarded by the cluster. NEW QUESTION # 21

A FortiGate deployment contains the following configuration:
What is the result of this configuration?

- A. Route-maps for VDOM SERVICES are excluded from HA configuration synchronization
- B. Route-maps from the Root VDOM configuration are available in VDOM SERVICES
- C. Route-maps are not configurable in VDOM SERVICES
- D. Route-maps from VDOM SERVICES are available in all other VDOMs

Answer: A

Explanation:
https://docs.fortinet.com/document/fortigate/7.2.4/administration-guide/105611

NEW QUESTION # 22

Refer to the exhibit.

An HTTPS access proxy is configured to demonstrate its function as a reverse proxy on behalf of the web server it is protecting. It verifies user identity, device identity, and trust context, before granting access to the protected source. It is assumed that the FortiGate EMS fabric connector has already been successfully connected.

You need to ensure that ZTNA access through the FortiGate will redirect users to the FortiAuthenticator to perform username/password and multifactor authentication to validate access prior to accessing resources behind the FortiGate.

In this scenario, which two further steps need to be taken on the FortiGate? (Choose two.)

- A. Create an authentication rule that sets the sso-auth-method to the FortiAuthenticator.
- B. Create a SAML user/server object referring to the FortiAuthenticator.

- C. Create an authentication scheme with the "method" as SAML.
- D. Create a firewall rule that allows access from the remote endpoint to the resources behind the FortiGate.

Answer: B,C

NEW QUESTION # 23
Refer to the exhibits.

A FortiGate cluster (CL-1) protects a data center hosting multiple web applications. A pair of FortiADC devices are already configured for SSL decryption (FAD-1), and re-encryption (FAD-2). CL-1 must accept unencrypted traffic from FAD-1, perform application detection on the plain-text traffic, and forward the inspected traffic to FAD-2.
The SSL-Offload-App-Detect application list and SSL-Offload protocol options profile are applied to the firewall policy handling the web application traffic on CL-1.
Given this scenario, which two configuration tasks must the administrator perform on CL-1? (Choose two.)

- A. □
- B. □
- C. □
- D. □

Answer: B,C

Explanation:
To enable application detection on plain-text traffic that has been decrypted by FortiADC, the administrator must perform two configuration tasks on CL-1:
* Enable SSL offloading in the firewall policy and select the SSL-Offload protocol options profile.
* Enable application control in the firewall policy and select the SSL-Offload-App-Detect application list.
