

# Valid Braindumps CIPS L4M7 Sheet, L4M7 Valid Test Blueprint

CIPS L4M7		CIPS Whole Life Asset Management	2
Topic 1	• The role of information in warehousing		
Topic 2	• Identification and risk levels		
Topic 3	• Effects of stock levels without negating any negative impact on service levels		
Topic 4	• Location of stock and warehouse		
Topic 5	• Differentiate between the different classifications of inventory		
Topic 6	• Identify the techniques associated with inventory control		
Topic 7	• Systems for product coding		
Topic 8	• The role of RFID technology		
Topic 9	• Ensure labour management support		
Topic 10	• Use best estimate of value available		
Topic 11	• Identify the contributing elements to cost of life cycle		
Topic 12	• Identify the principles, purpose and impact of stock and warehouse design		
Topic 13	• Identify the stock and inventory costs of holding inventory		
Topic 14	• Review stock levels in progress, safety stock and finished goods		
Topic 15	• Obsolete and redundant stock		

## CIPS L4M7 Redbubble Test Questions

### Exam L4M7 Papers, Certification L4M7 Questions

We have a long history of 10 years in designing the L4M7 exam guide and enjoy a good reputation across the globe. There are so many benefits to show that our L4M7 study engine delivers value. We can confirm that the high quality of the questions is your success. At the same time, the prices of our L4M7 practice materials are quite reasonable for no matter the staff or the students to afford. What is more, knowledge will give some solutions to our worry to others.

### CIPS Whole Life Asset Management Sample Questions (Q27-Q32):

**NEW QUESTION # 27**  
"A measure of the ability of an organisation to supply customers without delay" is the best definition of which of the following:

- A. Key performance indicator
- B. The order level
- C. Safety stock
- D. Service level

**Answer: D**

**Explanation:**  
In inventory management, service level is the expected probability of not letting a stock out during the next replenishment cycle or the probability of not losing sales.  
Key performance indicators (KPIs) can be used to analyse data based on performance objectives and set achievable goals for improvement. KPIs can be developed in conjunction with objectives, as well as metrics, and can be used to measure the operational efficiency of the process.

Candidates who successfully Pass L4M7 Exam will be able to demonstrate their expertise in asset management, which can help them stand out in their careers and increase their earning potential.

### CIPS Whole Life Asset Management Sample Questions (Q32-Q37):

#### NEW QUESTION # 32

Which of the following are subjective forecasting techniques? Select TWO that apply.

- A. Cycle counting
- B. Pareto principle
- C. Delphi method
- D. Test marketing
- E. Weighted moving average

**Answer: C,D**

Explanation:

The most common subjective forecasting techniques include the following:

- Market surveys
- Employee surveys
- Expert knowledge (Delphi method is a method using expert knowledge)
- Test marketing

Cycle counting is a periodic analysis of inventory in a storage location which is conducted through the counting of samples instead of physically counting the entire inventory available, so as to quickly have an accurate estimate of the inventory available without causing a stop to the day to day working as is the case with physically counting every unit.

The Pareto principle (also known as the 80/20 rule, the law of the vital few, or the principle of factor sparsity) states that, for many events, roughly 80% of the effects come from 20% of the causes.

Weighted moving averages assign a heavier weighting to more current data points since they are more relevant than data points in the distant past. The sum of the weighting should add up to 1 (or 100 percent).

#### NEW QUESTION # 33

XYZ Ltd is a large retailer who offers a range of products with different margins. The warehouse manager suggests that different product groups should have different level of safety stock. The appropriate level of safety stock is typically determined by...?

- A. Carrying sufficient safety stock so as to eliminate all stockouts
- B. Taking the square root of the economic order quantity
- C. Choosing the level of safety stock that assures a given service level
- D. Expected stockout cost multiplies with product margin

**Answer: C**

Explanation:

Safety stock is the stock held as a contingency or insurance against disruption or unexpected demand. Holding safety stock reduces the risks of stockouts, when an organisation is unable to meet an order or continue production due to lack of finished goods or input materials.

For single items, an extra investment in inventory (higher levels of safety stock) will always increase customer service levels.

Conversely, higher service levels imply larger quantities of safety stocks and an increased investment in inventory. (Procurement and Supply Chain Management - 9th Edition) However, high levels of safety stocks also increase the inventory cost. There must be a balance between inventory costs and customer service. Thus, calculating the should-be safety stock based on a determined service level has long been recommended by many professionals.

**NEW QUESTION # 34**

When considering the purchase of a capital asset, there are a number of factors to consider. These include cost of operation, spares, disposal and reuse. Which other factors could be considered?

1. Who owns the equipment
2. Compatibility with existing equipment
3. Contribution to turnover
4. Cost of maintenance

- A. 2 and 4 only
- B. 1 and 3 only
- C. 3 and 4 only
- D. 1 and 44 only

**Answer: A**

**NEW QUESTION # 35**

'The main consideration in designing the layout of a warehouse is the size of the storage space utilized.' Is this statement TRUE?

- A. No, because the most important consideration in stores design is the location of the main exit
- B. Yes, because large space provides assurance that stocks will not run out
- C. Yes, because suppliers need to be assured that the orders they receive will have storage when delivered
- D. No, because other considerations such as the traffic flow within the store are important

**Answer: D**

Explanation:

While storage space is important, traffic flow and accessibility are crucial for efficient warehouse design.

Proper layout ensures safe, quick movement of goods and minimizes bottlenecks, reducing operational costs and enhancing efficiency. In whole-life asset management, effective space utilization and efficient layout planning are key for long-term warehouse performance.

**NEW QUESTION # 36**

Can RFID tags work when they are attached to metal surfaces or embedded within metal products?

- A. Yes, all RFID tags can be used in every environmental conditions
- B. No, metal surface reflects the radio wave and thus interferes the operations of RFID tags
- C. No, RFID tags only work with plastic products
- D. Yes, some technologies allow RFID tags to work on metal or within metal products

**Answer: D**

Explanation:

Mounting or embedding RFID tags on metal can be tricky. Metal surfaces reflect energy emitted from RFID readers and create interference for RFID tag antennas, which means the tag isn't able to receive power and transmit information; however, specific RFID tags will work around metal surfaces. RFID companies have patented technology that allows RFID to work when attached to metal surfaces and even embedded within metal products. As long as you choose the correct RFID equipment for your environment and application, you won't need to worry about interference from metal.
