## SOA-C02 Practice Engine & SOA-C02 Vce Study Material & SOA-C02 Online Test Engine

If you are occupied with your study or work and have little time to prepare for your exam, then you can choose us. SOA-C02

training materials are edited by skilled professional experts, and therefore they are high-quality. You just need to spend about 48 to 72 hours on study, you can pass the exam. We are pass guarantee and money back guarantee for SOA-C02 Exam Materials, if you fail to pass the exam, you just need to send us your failure scanned to us, we will give you full refund, and no other questions will be asked. Online and offline service is available, if you have any questions for SOA-C02 exam materials, don't hesitate to consult us.

Passing the SOA-C02 Exam is a valuable certification for IT professionals who work with AWS, as it demonstrates their expertise in managing and operating AWS systems. AWS Certified SysOps Administrator - Associate (SOA-C02) certification is valid for three years, after which candidates must recertify to maintain their certification. Recertification can be achieved by passing the current version of the AWS Certified SysOps Administrator – Associate exam or a higher-level AWS certification exam.

## Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q449-Q454):

### NEW QUESTION # 449

A company runs an application on Amazon EC2 instances. The EC2 instances are in an Auto Scaling group and run behind an Application Load Balancer (ALB). The application experiences errors when total requests exceed 100 requests per second. A SysOps administrator must collect information about total requests for a 2-week period to determine when requests exceeded this threshold.

What should the SysOps administrator do to collect this data?

- A. Create an Amazon EventBridge (Amazon CloudWatch Events) rule. Configure an EC2 event matching pattern that creates a metric that is based on EC2 requests. Display the data in a graph.
- **B. Use the ALB's RequestCount metric. Configure a time range of 2 weeks and a period of 1 minute. Examine the chart to determine peak traffic times and volumes.**
- C. Create Amazon CloudWatch custom metrics on the EC2 launch configuration templates to create aggregated request metrics across all the EC2 instances.
- D. Use Amazon CloudWatch metric math to generate a sum of request counts for all the EC2 instances over a 2-week period. Sort by a 1-minute interval.

**Answer: B**

### NEW QUESTION # 450

A SysOps administrator is troubleshooting connection timeouts to an Amazon EC2 instance that has a public IP address. The instance has a private IP address of 172.31.16.139. When the SysOps administrator tries to ping the instance's public IP address from the remote IP address 203.0.113.12, the response is "request timed out." The flow logs contain the following information:

```
amazon
2 123456789010 eni-1235b9ca123456789 203.0.113.12 172.31.16.139 0 0 1 4 336 1432917027 1432917142 ACCEPT OK
2 123456789010 eni-1235b9ca123456789 172.31.16.139 203.0.113.12 0 0 1 4 336 1432917094 1432917142 REJECT OK
```

What is one cause of the problem?

- A. Inbound security group deny rule
- B. Network ACL inbound rules
- C. Outbound security group deny rule
- **D. Network ACL outbound rules**

**Answer: D**

### NEW QUESTION # 451

On an Amazon EC2 instance, an application is running that makes use of Amazon Simple Queue Service (Amazon SQS) queues. A SysOps administrator must guarantee that an application is capable of reading, writing, and deleting messages from SQS queues. Which solution satisfies these criteria the SAFEST way possible?

- A. Create and associate an IAM role that allows EC2 instances to call AWS services. Attach an IAM policy to the role that allows sqs:\* permissions to the appropriate queues.
- B. Create an IAM user with an IAM policy that allows the sqs:SendMessage permission, the sqs:ReceiveMessage permission, and the sqs:DeleteMessage permission to the appropriate queues. Export the IAM user's access key and secret access key as environment variables on the EC2 instance.
- C. Create an IAM user with an IAM policy that allows the sqs:SendMessage permission, the sqs:ReceiveMessage permission, and the sqs:DeleteMessage permission to the appropriate queues.

Embed the IAM user's credentials in the application's configuration.

- **D. Create and associate an IAM role that allows EC2 instances to call AWS services. Attach an IAM policy to the role that allows the sqs:SendMessage permission, the sqs:ReceiveMessage permission, and the sqs:DeleteMessage permission to the appropriate queues.**

**Answer: D**

#### NEW QUESTION # 452

A SysOps administrator is trying to set up an Amazon Route 53 domain name to route traffic to a website hosted on Amazon S3. The domain name of the website is www.anycompany.com and the S3 bucket name is anycompany-static. After the record set is set up in Route 53, the domain name www.anycompany.com does not seem to work, and the static website is not displayed in the browser.

Which of the following is a cause of this?

- A. The Route 53 record set must have an IAM role that allows access to the S3 bucket.
- **B. The S3 bucket name must match the record set name in Route 53.**
- C. The Route 53 record set must be in the same region as the S3 bucket.
- D. The S3 bucket must be configured with Amazon CloudFront first.

**Answer: B**

Explanation:

Make sure that the name of the resource record for your Amazon S3 website endpoint matches the name of your Amazon S3 bucket. Also, configure your bucket for website hosting.

For example, if your bucket's name is AWSDOC-EXAMPLE-BUCKET, the record name must also be AWSDOC-EXAMPLE-BUCKET.

#### NEW QUESTION # 453

A SysOps administrator is setting up an automated process to recover an Amazon EC2 instance in the event of an underlying hardware failure. The recovered instance must have the same private IP address and the same Elastic IP address that the original instance had. The SysOps team must receive an email notification when the recovery process is initiated.

Which solution will meet these requirements?

- **A. Create an Auto Scaling group across three Availability Zones with a minimum, maximum, and desired size of 1. Configure the Auto Scaling group to use a launch template that specifies the private IP address and the Elastic IP address. Add an activity notification for the Auto Scaling group to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe the SysOps team email address to the SNS topic.**
- B. Create an Amazon CloudWatch alarm for the EC2 Instance, and specify the StatusCheckFailed\_System metric. Add an EC2 action to the alarm to recover the instance. Add an alarm notification to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe the SysOps team email address to the SNS topic.
- C. Create an Auto Scaling group across three different subnets in the same Availability Zone with a minimum, maximum, and desired size of 1. Configure the Auto Seating group to use a launch template that specifies the private IP address and the Elastic IP address. Add an activity notification for the Auto Scaling group to send an email message to the SysOps team through Amazon Simple Email Service (Amazon SES).
- D. Create an Amazon CloudWatch alarm for the EC2 instance, and specify the StatusCheckFailed\_instance metric. Add an EC2 action to the alarm to recover the instance. Add an alarm notification to publish a message to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe the SysOps team email address to the SNS topic.

**Answer: A**

#### NEW QUESTION # 454

.....

New latest Amazon SOA-C02 valid exam study guide can help you exam in short time. Candidates can save a lot time and energy on preparation. It is a shortcut for puzzled examinees to purchase SOA-C02 valid exam study guide. If you choose our products, you only need to practice questions several times repeatedly before the real test. Our products are high-quality and high passing rate,

and then you will obtain many better opportunities.
