- A. Create an Extract or Replicat.
- **B. Fix the situation of what caused the Extract or Replicat to be down from the Critical Event box.**
- C. Restart configured Extracts and Replicats.
- D. See the lag time of currently configured Extracts and Replicats.

Answer: B

Explanation:

From the main page of the Oracle GoldenGate 19c Microservices Architecture (MA) Administration Server web interface, you can do the following: ? Restart configured Extracts and Replicats ? Create Extract or Replicat processes ? View lag time and status of

running processes ? But you cannot directly "fix" the underlying issue causing an Extract or Replicat to fail from the Critical Event box. You may be alerted to the issue there, but resolving it typically requires additional diagnosis or configuration changes via other tools or pages.

NEW QUESTION # 96

What Oracle GoldenGate microservices component is used to handle all incoming trail files?

- A. Service Manager
- B. Trail File server
- C. Administration server
- **D. Receiver server**

Answer: D

NEW QUESTION # 97

What type of multithreaded Oracle GoldenGate Extract uses Oracle's internal log parsing and supports downstream topologies?

- A. Parallel Extract
- B. Coordinated Extract
- **C. Integrated Extract**
- D. Classic Extract

Answer: C

NEW QUESTION # 98

If you were to create a target-initiated Distribution Path, which of the following must you provide?

- **A. The target URI**
- B. The name of the database transaction logs where database data changes were recorded
- C. The name of the Extract
- D. The name of the GoldenGate deployment

Answer: A

Explanation:

When creating a target-initiated Distribution Path in Oracle GoldenGate Microservices, the Receiver Service initiates the connection

to the source's Distribution Service. This requires specifying the target URI, which includes details like the source host, port number, and trail name. The Extract name is not directly required in this configuration.
