Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35
What role does the Azure Route Server play in network architecture?
Response:

- A. It facilitates the management of routing tables
- B. It provides encrypted VPN access
- C. It serves as a primary storage solution
- D. It acts as a firewall between different network segments

Answer: A

NEW QUESTION # 36
What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- A. You must configure both load balancers to allow administrative access.
- B. You must use unicast FGCP to synchronize the configurations.
- C. You must assign the public IP address to an Azure load balancer.
- D. You must configure all FortiGate VMs with three or more interfaces.

Answer: C

Explanation:
In an active-active FortiGate cluster deployment in Azure, you must assign the public IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. The Azure Load Balancer handles inbound traffic and distributes it to the active FortiGate instances.

NEW QUESTION # 37
Your organization is in the process of optimizing its Azure network architecture and wants to dynamically manage and exchange routing information between its virtual networks and on-premises networks.
Which Azure service would help to provide a centralized point for efficient route management and dynamic routing?

- A. Azure Virtual WAN
- B. Azure VPN Gateway
- C. Azure Route Server
- D. Azure ExpressRoute

Answer: C

Explanation:
Azure Route Server enables dynamic route exchange using BGP between your Azure virtual network and network virtual appliances (NVAs) or on-premises networks. It provides a centralized and scalable solution for route management, allowing seamless integration of routing updates without manual configuration changes.

NEW QUESTION # 38
Which role does the local network gateway play in FortiGate to Azure VPN connectivity?

- A. It defines the IP addresses of the on-premises network
- B. It manages the encryption keys for the VPN connection

- C. It is responsible for load balancing traffic between FortiGate and Azure
- D. It represents the Azure VPN Gateway in the FortiGate configuration

Answer: A

Explanation:
The local network gateway in Azure represents the on-premises VPN device (such as FortiGate) and defines the on-premises public IP address and the address prefixes of the on-premises network. This is essential for configuring site-to-site VPN connections from Azure to FortiGate.

NEW QUESTION # 39
Which Azure service is integral for detecting and responding to security threats on Azure virtual machines?
Response:

- A. Azure Advisor
- B. Azure Policy
- C. Azure Defender
- D. Azure Monitor

Answer: C
